OUR PASTIMES.

THE opening of the Waretown Rod and Gun club at the club house of Commodore John Westcott at Barnegat bay is noted in our Philadelphia letter, page 1182.

At Washington.

BOWLING.

The annual outing of the Florists' bowling team took place June 25 at Chesapeake Beach. There was an unusually large attendance and a merry time was enjoyed by all. Scores rolled on Wednesday night at the home alleys were as follows:

Shaffer	128	211	171
McLennon	192	198	163
Simmonds	151	169	187
Ernest	189	200	177
Goodman	162	128	136
Caldwell	182	191	165

G. S.

At Chicago.

The bowling at Bensinger's on Friday was of little better quality than that of last week, although only 15 men turned out for the onslaught on the pins. Henry Kruchten having signified his intention of dropping out of the competition, John Zech is now high average man with 179 2-9 and is followed in the order named by A. Zech, 172 9-12; G. Asmus, 172 2-9; V. Bergman, 164 3-12; Lorenzen, 164 1-3; T. Graff, 156 4-9; W. Wolf, 155 4-6; T. C. Yarnall, 153 7-12; F. Ayers, 151 6-12; J. Degnan, 151. This week there will be the prize bowling in conjunction with the competition for a place on the convention team. The scores of Friday night's games follow:

T. C. Yarnall	205	167	164
F. Pasternik	127	118	147
T. Graff	210	127	190
E. Farley	158	160	135
J. Zech	141	209	171
Totals	841	781	807
G. Asmus	155	169	202
V. Bergman	164	147	169
A. Zech	170	157	206
F. Ayres	179	138	162
E. Schultz	107	127	128
Totals	775	738	867
W. Wolff	146	132	172
O. Goerisch	154	138	138
Craig	133	104	105
T. Vogel		95	79
Ringler		177	100

Had No Use for Flowers.

A big box of peonies, roses and lily of the valley had come to the East Side school through one of the flower missions that do what they can toward equalizing things between people who live where flowers grow and the unlucky ones who don't. One of the teachers was doing her best to distribute the blossoms fairly among the grimy, eager little hands that reached out ravenously for them. But there was one mite of a child who seemed quite indifferent to the gift; she just sat stolidly looking on while the others gloated over the blossoms.

"Don't you want some roses, Annie?" the teacher asked her. "Here's a nice bunch." A pair of unresponsive eyes looked up from the sharp little face, and the frowsy head shook slowly. "No'm," she said, shortly. "I don't want no flowers. I ain't dead." She had never seen flowers used except at funerals, and that, she supposed, was what they were for.—New York Tribune.

ISLIP, N. Y.—H. K. Knapp is building a greenhouse 40x100 feet. Concrete is being largely used in the construction.

LILY OF THE VALLEY.

Chicago.

NO BUSINESS.

The past week has been the most quiet of the season, what little bottom there was in the market last week having dropped out completely. To be sure not quite so many peonies went to the dump but this was due to the heavy rains which beat down the full blown stock and prevented its shipment to the market and not to any increased demand. While this condition helped a little it did not affect the supply sufficiently to cause any appreciable shortening up and the glut was as pronounced as ever.

This did not apply to peonies alone but to all the other flowers. Roses were at a discount and while some of the summer roses, such as Killarney and Kaiserin were of good quality, the growers sent in such a mass of poor flowers that the net returns did not increase their bank accounts to abnormal proportions. There was a slight movement in carnations, one Greek merchant using about 2,000 per day. The extra fancy brought from .75 to $1 but the bulk of them sold anywhere from 25 to 40 cents.

Boiled down to a simple statement of facts, the dull season is here, the parks and gardens are full of flowers, June weddings are a thing of the past, funerals are few and every one who can get away is at the summer resorts and there is no demand.

NOTES.

The West Park board may bring suit to compel the C. E. Carson Contracting Co. to expend from $30,000 to $40,000 in rebuilding the glass roof of the new Garfield Park conservatories. The failure of the bars to stand the strain and the breakage of glass consequent on this has been attributed to failure on the part of the contractor to carry out the architect's specifications. Instead of sawing out the curved sash bars, as the plans contemplated, it is said the contractor used pieces of wood that had been bent into the required form. The Carson Co., which built the conservatories at a total cost of $185,000, claims that the method of construction employed was superior to the other and that it cannot be held responsible for the alleged defects. The matter has been placed in the hands of the attorney of the board, who is expected within a few days to recommend a course of procedure.

The annual picnic of the Florists' Club will be held on Thursday, July 22, at Riverview picnic grove, adjoining Riverview park. Games, races and dancing are on the programme and as the wholesale market has agreed to close at 1 o'clock on that day a large attendance is expected. Tickets, which have been placed at 50 cents (including admission to Riverview park), can be obtained of Peter Reinberg, Bassett & Washburn, Poehlmann Bros. Co., A. L. Randall Co., Winterson's Seed Store, E. C. Amling, Zech & Mann.

The city of Boston appropriates each year 30 cents for flowers for each graduate from the public schools. Each florist is entitled to submit a bouquet and no one florist is allowed to furnish more than 300 bouquets. This divides the business up among all the trade and prevents any one man getting the bulk of the business. Something of this kind might be suggested to the powers that be in this city.

On account of the rapidly increasing business at the downtown store needing all its attention, the Fleischman Floral Co. has decided to sell the north side store on State and Division streets. It is very seldom an opportunity like this occurs of securing a well-established business in such an excellent position, close to the fashionable Lake Shore drive and best houses.

A. J. Eckert, of the A. L. Randall Co., felt the effect of the Calhoun place bomb on Sunday night. He was waiting for a car at the corner of Madison and Dearborn streets when the explosion occurred and was knocked back against the building. He fortunately escaped uninjured, though considerably shaken up.

At a postponed meeting of the florists held on Monday afternoon at Peter Reinberg's it was decided to defer bringing the question of flowers at school exercises before the present school board on account of the well-known position of President Schneider and to wait until the new board is appointed.

The John C. Moninger Co. is doing quite a large business in greenhouse boilers and supplies, which line it has recently added to its business. The new additions to the plant will be completed early in the fall when their facilities will be largely increased.

Joseph M. Smely of Aurora was seriously burned on Saturday last by falling into a tub of scalding water. He was preparing a bath when, overcome by the heat, he toppled over into the hot water. He was unconscious when taken to the hospital.

Quite an interesting fight was promised on Thursday evening at the meeting of the Florists' Club over the election of recording and corresponding secretary. Frank Johnson and Louis Winterson were the contestants and at the hour of going to press it was anyone's fight.

William P. Kyle and wife celebrated their crystal anniversary on Sunday at their home, Fifty-fourth street and Lake avenue. A small party of friends wished the happy couple many succeeding years of joy and prosperity.

Great crowds visited Jackson park on Sunday as usual, but the special attraction was the rose garden on the wooded island which, as intimated in the nursery column last week, was at its brightest and best.

W. J. Smyth, whose leg was fractured in an automobile accident last week, is getting along nicely and the physicians confidently expect that there will be no ill effects after the fracture is brought together.

The following are the committees appointed for the Florists' Club picnic: Arrangements, Ed. Enders, chairman; Frank Pasternik, T. E. Waters. Sports, A. Zeck, chairman; John Kruchten, T. C. Yarnall.

Mrs. Jacob Schneider of Manistee, Mich., was in the market this week and reports that the summer resort business is begining to boom.

Louis Wittbold is in Wheeling, called there by the serious illness of Mrs. Wittbold's father, who is in a very precarious condition.

John Kruchten will spend July 4-5 in Milwaukee and will return to bachelor quarters, leaving his wife in Wisconsin for a two weeks' stay.

The Fourth of July falling on Sunday this year, the wholesale and commission houses will close at noon on Monday, July 5.

James Aldous, Sr., of James Aldous & Son, Iowa City, Ia., has gone abroad and will spend the summer in England.

E. Farley, with C. W. McKellar, leaves July 3 for Indianapolis for a two weeks' vacation.

The Geo. Wittbold Co. has an entire house of kentias and the plants are particularly fine.

The condition of Uncle John Thorpe, now in his sixty-ninth year, continues serious.

J. B. Deamud left on Tuesday evening for Detroit on a short trip.

Visitors: Mrs. Jacob Schneider, Manistee, Mich.; Chas. H. Ketcham, South Haven, Mich.; John H. Durham, Mount City, Mo.; G. F. Crabb, of Crabb & Hunter Floral Co., Grand Rapids, Mich.; C. E. Schaefer, president and general manager La Crosse Floral Co., La Crosse, Wis.; W. G. Matthews, Dayton, O.; James Aldous, Jr., of James Aldous & Son, Iowa City, Ia.; Ed Bertermann of Bertermann Bros. Co., Indianapolis, Ind.

Salix Babylonica Ramulis Aureis.

A RARE WILLOW.

The ordinary weeping willow (Salix Babylonica) is a well-known and deservedly popular tree for planting in the vicinity of water, no tree being of more graceful outline or better suited for the purpose. Its grace of habit is perhaps most apparent when there are trees in the vicinity of stiffer aspect, the contrast being helpful to both, says the Garden. At all times of the year, even in the depth of winter, its peculiarly light outline commands attention, while it is difficult to imagine anything more beautiful in early spring, when the pendulous wand-like branches are clothed with the bright green of the bursting leaves. The variety under notice has not been planted to any great extent, but it is worthy of consideration when a selection of waterside trees is being made, for, in addition to possessing the merits of the type, it has the advantage of having golden bark, which is very showy after the fall of the leaves. It has also another recommendation, for it is a male form, and the slender yellow catkins are very conspicuous in April. Like other willows, cuttings a foot long planted outdoors in autumn root freely, and strong plants are quickly formed. One point in the culture of weeping willows which demands some consideration is the tying up of the leading branches for a few years while the specimens are young. This enables the tree to form a long, erect stem which adds very considerably to its future beauty. If this is not done a bush-like appearance, rather than tree size, is frequently the result. In addition to growing them by the waterside these weeping willows may be planted with advantage in other places, particularly in situations where the soil is naturally rather damp.

FLORENCE, MASS.—Business has been very good in this section since June 1.—K.

VACAVILLE, CALIF.—H. L. Blake, a deciduous fruit grower, has been appointed by Governor Gillett to the position on the state board of horticultural examiners made vacant by the recent resignation of Henry Stabler. As soon as Mr. Blake qualifies it is expected the board will organize and set a date for examination of applicants for positions as horticultural commissioners throughout the state.

Manhattan Flower Market

WHOLESALE FLORISTS

Telephone: 1016 Madison Sq. 46 W. 28th St., NEW YORK

Ship us some stock. We need a large supply of all kinds of flowers, **Roses, Carnations, Sweet Peas, Narcissus, Summer Stock, etc.,** for our new store. Reliability and responsibility first-class. Good prices and prompt returns. Good opportunity.

New York.

NOTHING SELLING.

The market conditions of the past week were, as foretold in our last letter, very bad. The heat was intense and caused a number of deaths and much suffering among those who had to stay and endure it, and they comprise much the larger portion of the city's population. There was also much suffering and many deaths among horses. For most of this either owners or teamsters, or both, were responsible. In this city conditions in this respect may be no worse in proportion than elsewhere, but it is a safe conclusion that some of our horse owners and drivers should be in jail. The week opened with hot weather and a great surplus of flowers, and each day was but an aggravated repetition of the conditions of the previous one. With such hot weather, it would have been hard work to dispose of a light supply of stock, for the people were not sighing for flowers, but with truck load after truck load pouring in conditions were unspeakable. We note that a contemporary says that "sweet peas are one of the few strong things in the market." That must mean that they emit a strong odor as they are fleeing into the ashman's cart. Nobody can remember such a glut of lilies. Ice boxes were full of them to overflowing. Two cents, one cent, nothing doing in half the lily stock that came in. The market gardener who advised all his neighbors to sow turnip seed—and himself sowed other things—must have somewhere a prototype among the florists who ship to this market. He must have persuaded most of them to have lilies for June. The saying that good stock will always bring a price fell down this time, for of what use is good stock if nobody wants it? There was a cooling shower on Friday night, but no real relief from the heat until Sunday, June 27, which was cool, cloudy and showery throughout. Toward the last of the week there were some heavy funeral orders, grim reminders of old Sol's merciless doings. The heat is playing havoc with greenhouse stock and it does seem as though the carnations will soon be out. Many roses would not be taken as a gift, if good roses were wanted, but "there's the rub," so few are wanted. The surplus has given some of the designers a free hand to use the best on the market in funeral work, and orchids, lilies and lily of the valley have been seen in profusion and used with fine effect.

June 28.—Stock cleaned up somewhat better this morning, but there was no advance in prices worthy of note. The weather is cooler and there was very heavy rain this afternoon. Though many roses are of inferior quality, there are enough passably good ones to supply all demands. There are yet plenty of carnations but they are a failing quantity and will be scarcer in a week. Lilies are still in surplus and sweet peas as the sands on the seashore.

NOTES.

A. Hanig, a well known Brooklyn dealer, has recently taken a large store at 502 Fulton street. He has, in addition, another store at Norstrand and St. Mark's avenues, and has been taking advantage of the surplus to handle a great amount of stock.

Ferdinand Fleischman, who now has a store at Fifth avenue and Forty-second street, will, on or about July 19, open another store at the Cortlandt street terminal of the McAdoo tunnels to Jersey City. He will also have a fruit store at the same location.

The programme of the Florists' Club outing to Whitestone park contains portraits of the members, including the youngest, also the oldest florist, and officers and Harry Bunyard's "Greetynge" and shows a long list of games and sports that will be enjoyed ere this issue reaches our readers.

Myer, of Fifty-eighth street and Madison avenue, has a very attractive window of water lilies. There is a Dutch windmill and running water flows into the pond. In the background a handsomely painted drop curtain heightens the electrical display at night.

The transportation committee of the Florists' Club has decided to go by the New York Central to the annual convention at Cincinnati, but has not selected the train as yet.

Peter Crowe, Utica, spent several days here during the past week. He was accompanied by a bright young granddaughter and much time was given to sight-seeing.

Visitors: Wm. F. Kasting, Buffalo; S. J. Reuter, Westerley, R. I.; C. L. Seybold, Baltimore; R. O. King, N. Tonawanda, and L. E. Wood of Fishkill.

Cincinnati.

TRADE GOOD FOR THE SEASON.

The general report among the wholesalers is that business is very satisfactory for the season of the year. Of course it is impossible to sell all the flowers coming in; especially is this true of sweet peas, which, from last Wednesday on, are the biggest kind of a glut. Good roses sell well at fair prices, and the same may be said of carnations, while the poorer grades find their way to the hospitals and some are consigned to the barrel. Shasta daisies are fine but there is not much call for them. Lily of the valley and Lilium longiflorum were in active demand all week and cleaned out nicely, every day some late orders on these having been turned down. A few asters are to be had, but as long as we have carnations nobody seems to care for them. Smilax, adiantum, asparagus, ferns, in fact all green goods have been good property and sold readily.

CONVENTION MATTERS.

It is very gratifying to note the interest the craft in this city is taking in S. A. F. convention matters. All the boys seem to realize that the Cincinnati Florists' Society has quite a task to take care of the visitors in August, and even now members are offering their services. All traveling men tell us that we can look for an immense crowd and we are going to make this the biggest and best ever. At the meeting last Monday night at the Sinton hotel of the board of governors of our society we had the pleasure of Mrs. Maynard's company. Mrs. Maynard came here to consult with the local society regarding the Ladies' S. A. F., and we must admit that the ladies are very moderate in their demands and do not seem to want many favors extended. Another meeting of the local board will be held Monday night and every Monday night until convention time. Wm. Murphy, superintendent of exhibits, was at first under the impression that all the space would not be taken as he had too much room. Will is gradually changing his mind. Intending exhibitors write and inquire for a certain amount of space and then, when ordering, just double the amount. He had no less than four such cases the past week.

Trade Exhibit

OF THE

Society of American Florists

and Ornamental Horticulturists

TO BE HELD

AT CINCINNATI

Aug. 17th to 20th (inclusive)

For space and rates apply to

WM. MURPHY,

311 Main St., CINCINNATI, O.

NOTES.

Albert McCullough returned Friday from the seedsmen's convention at Niagara Falls and is much pleased with the work done and treatment received. He states the weather was delightfully cool, which is quite a contrast to the 90° in the shade we have been having the past week.

C. E. Critchell is busy remodeling his place. He had the old refrigerator taken out and replaced the same with a larger one, the dimensions of which is 12x12 feet and 10 feet high. When finished Charlie will have one of the best and most complete wholesale houses in the city.

Ernst Mack of Price Hill states that business with him has been very good this spring, but that collections are slow. Ernst grows longiflorum lilies and grows them well and claims all you have to do is to give them good soil and watch them closely to be successful.

Will Gear is now a full-fledged Mason. He received the M. M. degree last Saturday night and says he got everything that was coming to him.

Miss Edith Kyrk has been exceptionally busy the past week with funeral work. S.

NEWTOWN, N. Y.—Adolph Sobrieralski, a gardener, 45 years old, of Grand View avenue, was found dead in his bedroom June 23 by his wife, with his throat and both wrists cut with a razor. Mrs. Sobrieralski said that her husband quarreled with her and then went to his bedroom. She did not see him again until she went to his room and found him dead on his bed, with a razor alongside of him. She also said that he had threatened to kill himself many times during the past month.

GREAT HEAT INJURES STOCK.

The feature of the past week has been the extreme heat, which has been almost unbearable, the glass showing above 90° almost continuously throughout the greater part of the day. This great burst of hot weather has been especially hard on the roses which, no matter how tight they are cut, are pretty sure to open up in the boxes while enroute to the market. Everything in fact all along the line shows the effects of the scorching and if it were not for the extremely light demand there would be trouble to get stock. Eastern American Beauty and Kaiserin roses have the first call, the local stock, particularly Beauties, having deteriorated very much. Lily of the valley and orchids are in good demand for fine work. Sweet peas are coming in good shape, the copious rains of a week ago helping them very materially. Gladioli are also seen in all the stores, where they make a good summer decoration. Water lily basins filled with an assortment of the beautiful flowers attract attention and are used by quite a few of the stores in their window displays. Asparagus is plentiful, the bunches for 50 cents containing twice as much as sold during the busy season.

NOTES.

The annual opening of the Waretown Rod & Gun Club at the club house of Commodore John Westcott at Waretown on Barnegat bay, was held on Friday, June 25. Those present were James Dean, Freeport, L. I.; H. B. Beatty, Oil City; W. J. Stewart, Boston; John Westcott, W. K. Harris, John Burton, George Anderson, Robert Craig, G. C. Watson, Edwin Lonsdale, Wm. H. Westcott, George Craig, David Rust, Wm. Graham, Charles Eimerman, Daniel C. Donoghue, Lewis Burk, John W. Dunham, Robert Cantly, Dr. Lane and Robert Kift. Inspections of the 400-acre farm with its half mile water front, sailing, fishing, games of quoits, etc., were among the interesting doings of the day. In the evening the feature was the presentation of a fine hardwood combination bookcase and desk, the shelves stocked with books by best authors, the drawers containing stationery illuminated with pictures of the club house and bay, with yacht in foreground. Robert Craig made the presentation in his usual happy manner. Words of appreciation of the host and his thoughtfulness in providing such a comfortable retreat for his friends were voiced by Messrs. Beatty, Dean and others. W. K. Harris and Charles Eimerman were the guests of John Burton, coming the 80 miles from Philadelphia in his auto. Nearly all the guests stayed over until Sunday.

William Falck was the guest of honor at a farewell dinner given him by his employers, Pennock Bros., and his fellow employes. This very pleasant affair was given at Boothby's restaurant on Saturday, June 26, and 19 persons in all gathered to show their appreciation of his worth and wish him success in his future home in the land of his birth, Copenhagen, Denmark, for which country he will sail from New York July 3. After partaking of a very generous menu there were speeches and songs, each one trying to do his part to add to the pleasure of the guest.

There was a great demand for American Beauty on Wednesday of this week from graduates of the girls' high school who had adopted this rose as their class flower. Nearly every scholar carried a dozen long stemmed roses tied with ribbon which ran the total of blooms used into the thousands.

The feature of the July meeting of the Florists' Club on July 6 will be the paper of Edwin Lonsdale on the "Decoration of the Lawn." This should be one of the club's best productions, as fancy foliage and flowering plants for carpet and other bedding has long been a specialty of Mr. Lonsdale.

The Niessen Co. offer as leaders something choice in gladioli and sweet peas. Asters are promised for next week.

Wm. McKissick & Bros. are right in it with fine American Beauty and Kaiserin roses, eastern stock; high grade sweet peas are also seen in quantity.

Ralph Shrigley of the Neissen force is spending a part of his vacation at Atlantic City.

K.

Boston.

GLUT OF STOCK.

The termination of the season of 1908-09 was marked by the hottest stretch of June weather ever recorded by the local bureau. The difficulty arising from these conditions brought many growers face to face with complete annihilation of their ready for market products and the monetary loss was extensive. The final call for June weddings and graduations has been registered and from now on we face the long summer season. Funeral work, which of late has been exceedingly heavy, is now the principal and only reliance of the trade. The market is glutted with every conceivable product known to florists. Good roses as might be expected are exceedingly scarce and lots of good sales are lost to some other choice. Killarney is the only colored rose that has shown any good qualities at all and has had a heavy run. American Beauty is away off and the few coming in bear no relation to the customary idol. Richmond has dropped out of sight completely, a few remnants of dissipated appearance comprising the best stock cut. An excellent line of Kaiserin is being received and in more ways than one has been a substantial support to this section of the list. Carnations are bravely holding out but the effort is too much and the end is not far off.

NOTES.

While engaged in closing day decorations at Howard, June 25, the hottest day of the week, W. J. Kenney of the decorating staff of Thos. I. Galvin (Inc.), was overcome by the excessive heat and taken to the Cambridge hospital. He was discharged the following day, having yielded quickly to the treatment.

George Butterworth, son of T. J. Butterworth of orchid fame, and who is selling agent of the firm, sailed June 26 on the steamship Cymric for an extended tour of Europe. A large party of friends were at the dock to start him safely on his excursion.

W. J. Gilson, the genial sales-agent for Thomas Roland, has consigned himself for the next two weeks to the Adirondacks, where he seeks a well earned rest.

B.

Massachusetts Horticultural Society.

AWARDS JUNE 26 AND 27.

Special prizes for hardy roses. Theodore Lyman fund. Twenty-four distinct named varieties, three of each variety.—M. J. Walsh, first; E. E. Lincoln, third.

John C. Chaffin fund (for amateurs only). Three blooms of any white hybrid perpetual rose.—E. E. Lincoln, first, with Frau Karl Druschki. Three blooms, pink—T. E. Lincoln, first, with Baroness Rothschild; Robert Seaver, second, with Mrs. John Laing; E. E. Lincoln, third, with Mme. Gabriel Luizet. Three blooms, red—Robert Seaver, first, with Ulrich Brunner; Robert Seaver, second, with Capt. Hayward; E. E. Lincoln, third, with Ulrich Brunner. Three blooms of any new hybrid perpetual rose not offered in any American catalogue previous to 1900—G. R. White, with Frau Karl Druschki, first.

Gratuities: W. J. Clemson, W. A. Riggs, J. G. Wright, Mrs. E. M. Gill and M. H. Walsh, roses; G. R. White, Rose Frau Karl Druschki; W. A. Riggs, Oldtown Nurseries, and F. J. Rea, herbaceous plants; William Whitman, display of foxgloves, sweet williams and Canterbury bells; Mrs. Frederick Ayer, display of sweet williams and Canterbury bells; Mrs. E. M. Gill, display.

Silver Medals: Jackson Dawson, Rose Prof. Sargent (R. Wichuraiana X Crimson Rambler X pink hybrid); Prof. C. S. Sargent, rhododendron, light pink maximum hybrid. Bronze Medal: Bellevue Nurseries, artistic display. Certificates of merit: W. G. Postings, seedling branching Delphinium Belladonna; W. W. Rawson & Co., new sweet peas. Honorable mention: George Hollis, E. J. Shaylor and T. C. Thurlow & Co., peonies. Vote of thanks: T. C. Thurlow & Co., vases of kalmias; W. A. Manda, display of herbaceous plants; R. & J. Farquhar & Co., display of peonies.

Providence, R. I.

"Carpet Bedding" was the subject of a discourse delivered by William Appleton, Sr., June 21, before the Florists' Club at Swarts Lodge hall, 96 Westminster street. Mr. Appleton illustrated his subject with diagrams. A plant of Begonia Vernon was also exhibited and made the subject of a general discussion.

An invitation extended by James Hockey to the members of the club to visit his greenhouses at Pawtucket was accepted, the visit to be made in the near future. The chair appointed the following committee to make arrangements for the annual outing: James Dillon, E. A. Appleton, James Hockey, C. S. Macnair and Alexander Macrae. The next meeting will be held the third Monday in July.

Viburnum Carlesii.

This species is one of the best of the many viburnums that have been introduced to gardens during the last few years. It was first brought to notice by means of herbarium material collected by W. R. Carles in western China. In 1901 L. Boehmer & Co., nurserymen at Yokohama, sent specimens which had been raised from seeds collected in Corea, in 1885, to Kew for name, and a year later a living plant was received. Doubts being entertained as to its hardiness, the plant was kept in a cold frame for three winters, but in 1905 it was planted in a bed of hardy heaths. The protection afforded in this manner proved sufficient to keep it safe through the winter, and the first flowers were produced in the spring of 1906. Each year since it has flowered well, and last year it developed upwards of 30 inflorescences. This particular plant is now about 2½ feet high and 2½ feet through, while another example which originated from a cutting is almost as large. V. Carlesii is recognized by means of its oval, serrated leaves, which are hairy on both surfaces and have a greyish tint, and by its rounded heads of rondeletia-like flowers. The flowers are borne in dense heads 2 to 3 inches across and open during early May. They are white, slightly flushed with pink, and are deliciously fragrant. The species appears to thrive best in light, loamy soil with which a little peat has been mixed. Propagation is effected by means of cuttings which root readily in summer.—Gardeners' Chronicle.

Spring Flower Shows in England.

A new movement is in evidence. This movement is the institution of flower shows in the early springtime, when the first delightful blossoms of the new year are awaking fresh hopes and joys in men's breasts after the dreary chilliness and discomforts of the winter. The movement began only a year or two ago—scarce half a dozen years—with daffodil shows in Cornwall, in Sussex, and in Huntingdonshire. In several other places there had been later "spring exhibitions," usually held in the month of May, but in May there is abundance of flowers, and, provided the weather is agreeable, a show indoors is less tempting just then. But these new daffodil shows are being held in March or early in April, and so far as the reports carry us, they have been eminently and uniformly successful.

Perhaps in the fact of a new season for shows some of the struggling societies, whose energies have been expended for many years upon the maintenance of an autumn exhibition, may find salvation. It almost seems as though the public become surfeited and bored with the abundance of summer shows and entertainments that are found upon every hand, and that the autumn exhibitions, mainly composed of chrysanthemums, Lorraine begonias, and apples that look wonderfully alike to the cursory viewer, overload the programme of the season. In many cases we know this is not so; in others it surely is. But an early exhibition in March, even if it is only tiny, with a varied representation of fragrant hyacinths, mignonette, violets and roses, brilliant tulips, gay daffodils, dainty carnations; fresh, crisp, salad vegetables, and here and there some choice fruits, with table decorations, little rock gardens, and forced flowering shrubs, comes with irresistible charm to the suburbanite or town-dweller who has not, probably, seen a floral "omnium gatherum" since the previous November. With, or without, the pleasant harmonies of music, these first shows of the year are generally regarded as the best, the most pleasing, and the most cheering. Are the societies considering their responsibilities or their position in relation to this matter?—Journal of Horticulture.

McFarland and the Falls.

NIAGARA FALLS.—J. Horace McFarland of Harrisburg, Pa., president of the American Civic Association, who led the fight to save Niagara was in town and delivered an address to the Amercan Seed Trade Association. He is very much pleased with the work that has been done under direction of the Taft Niagara commission to restore the river bank north of the upper steel-arch bridge to semblance of its first beauty.

But Mr. McFarland is not at all pleased with this city. Conditions between Echota and Falls street are very unsightly, he says, and ought to be corrected at once to harmonize with the natural surroundings. Speaking of general conditions about Niagara, he said:

"I hope to see the day when there is a great international reservation with all the trumpery amusement places and the factories removed. Remember, I do not advocate the tearing down of the factories, but I do think they should be moved back from the river banks."—Buffalo Express.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

SPEAKING of an asparagus show in the Vale of Evesham, one of the noted market garden spots in England, the Journal of Horticulture says: "In the opinion of the judges, there is nothing to equal good, dry straw for packing asparagus, as it permits air to circulate and keeps the asparagus in good condition while amply protecting it. They wished to discourage the use of paper, which does not permit of sufficient ventilation."

In the Greenhouse.

Although cucumbers and tomatoes are heat-loving subjects, the thing can be overdone and we now enter a time of year when a clear glass roof is against best results. A little shade means a big help. There are places where road-dust answers all purposes, that is, passing vehicles develop dust which settles over the houses so that the sun's rays are broken. In the majority of cases we must put on the shade. A favorite method is to use freshly air-slaked lime. Stir it up in water until of about the body of paint, screen it and apply with brush or spray pump. We prefer the spray pump. Lime must be air-slaked. If water-slaked it will stick permanently; if old air-slaked lime is used it will wash off with first rain. To air-slake lime quickly we place fresh lump lime in a box or bucket and sprinkle with just enough water to start it to heat and crumble. It should break up perfectly dry and fine.

As a rule, we do not like lime as it injures paint and putty. We prefer whiting, mixed with kerosene, to which we add a few drops of linseed oil to make it adhesive. This sprayed on makes a good shade that will come off when wanted to, yet hang on. North and south houses should have the heaviest coat on the west side, as it is the afternoon sun that is the hottest. East and west houses, of course, need most shade on the south slope. Tomatoes will ripen watery and acid in too high a temperature. With a little shade, they can be finished off meaty and pleasant to the taste.

MARKETMAN.

Manures for Potatoes.

The conclusions of Messrs. Porter and Gaut, from the experiments conducted by them for the Lancashire county council, are to the effect that a heavy dressing (20 tons per statute acre) of farmyard manure results in a smaller return per ton of manure used than is the case with a moderate dressing (10 tons) of farmyard manure. A moderate dressing of the latter, in conjunction with a suitable dressing of artificial manures, is capable of producing a larger and a more profitable crop than a heavy dressing of farmyard manure alone. A "complete" dressing of artificial manures—i. e., containing the three constituents, nitrogen, phosphates, and potash—in conjunction with farmyard manure, gives the largest crop and the highest profit per statute acre. The doubling in turn of each of the constituents in the "complete" dressing does not result in a satisfactory profit, and may, in some cases, result in a heavy loss. Where no farmyard manure is obtainable, large and profitable crops can be grown with the aid of a "complete" dressing of artificial manures.—Gardeners' Magazine.

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

GROWER and EXPORTER on the VERY LARGEST SCALE of all CHOICE VEGETABLE, FLOWER and FARM SEEDS. (Established 1787.)

Specialties: **Beans,** Beets, Cabbages, **Carrots,** Kohl Rabi, Leek, Lettuces, **Onions, Peas, Radishes,** Spinach, Turnips, Swedes, **Asters,** Balsams, Begonias, Carnations, Cinerarias, Gloxinias, Larkspur, Nasturtiums **Pansies,** Petunias, Phloxes, Primulas, Scabious, **Stocks,** Verbenas, Zinnias, etc. Catalogue free on application.

All seeds offered are grown under my personal supervision on my own grounds of more than 3,000 acres, and are warranted true to name, of strongest growth, finest stocks and best quality.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

Prices of Indoor Fruits and Vegetables.

The prices of indoor fruits and vegetables at leading points June 5 were as follows: New York, cucumbers, 50 cents per dozen; mushrooms, 60 cents to $1 per pound; mint, 30 cents per dozen bunches; tomatoes, 12½ to 15 cents per pound; grapes, 85 cents to $1.50 per pound; cantaloupes, $1 to $2 each peaches, $6 per dozen; nectarines, $6 per dozen; mangoes, $6 per dozen. Kansas City, cucumbers, 50 to 75 cents per dozen; Cincinnati, cucumbers, 20 cents per dozen; mushrooms, 40 cents per pound. Boston cucumbers, $3 to $3.50 per box. Chicago cucumbers, 60 cents to $1.50 per dozen; head lettuce $3 to $6 per bbl.; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 20 to 30 cents per dozen bunches; grapes, Gros Colmar 75 cents to $2 per pound; peaches, $12 per dozen bunches; grapes, Grôs Colmar, 75 cents to $2 per pound; peaches, $12 per dozen; English melons, $12 per dozen; peppers, 30 to 75 cents per dozen.

Iris Bucharica.

Iris Bucharica is a promising subject as a hardy plant, says the Journal of Horticulture. Not only does it stand the winter, but it has resisted with more success than we had anticipated the ordeal of the week of hard weather in April, when we had about 16 degrees of frost. The flowers which were open were touched and wasted, but the foliage did not seem to suffer in the least, although its appearance would almost indicate some tenderness. Iris Bucharica is a good plant with handsome foliage, rather like that of I. orchioides, but broader, and the leaves have all the silvery sheen of I. orchioides, but the flowers, which are raised about a foot from the soil, are of a pretty white and yellow. This species was exhibited at a meeting of the Royal Horticultural Society in 1902, and was awarded a first-class certificate on that occasion—an honor well deserved. With us it is grown on a low ledge of rockwork, and in light soil, the position being an open and sunny one, and not sheltered to any extent.

OCONOMOWOC, WIS.—Spring business has picked up considerably in the past few weeks, the backward season making nearly all bedding work considerably later than usual.

ALBANY, N. Y.—Elihu S. Miller of Wading River has been appointed by Governor Hughes as one of the trustees of the New York Agricultural Experiment Station. The governor has made a good selection. One could canvass the state from one end to the other and a more progressive agriculturist or florist could not be found. He will prove a valuable assistant in this work, for he has had years of experience in experimental work on his own account.

Lilium Harrisii, Now Ready for Delivery :: ::

Our first consignments have just reached us, and we are now filling early orders. **Easter comes very early next year, March 27th,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered both in regard to purity and freedom from disease and not the late type now so often furnished.

6- 7-in. bulbs, 350 to the case.....$ 6.00 per 100; $ 55.00 per 1000
7- 9-in. bulbs, 200 to the case..... 9.00 per 100; 85.00 per 1000
9-11-in. bulbs, 100 to the case..... 20.00 per 100; 180.00 per 1000
Full case lots at thousand rate.

Large Specimen Hydrangeas

In tubs and half-barrels. For July and August flowering.

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season; flowers are just beginning to show color. Extra fine plants in tubs, $3.00 each; very large specimens in half barrels, $5.00 and $7.50 each.

Formerly Garfield Park Flower Co.,

AMERICAN SEED TRADE ASSOCIATION AND FRIENDS AT NIAGARA FALLS, ONT., JUNE 23, 1909.—PR

The Seed Trade.

American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D. C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, June, 1910.

L. H. VAUGHAN is in San Francisco.

THE district of Provence, France, is a large producer of alfalfa seed.

D. I. BUSHNELL will spend his vacation at Sheffield, Berkshire county, Mass.

SAN JOSE, CALIF., June 15.—A good shower fell in the Santa Clara valley today.

SANTA ANA, CALIF.—The California Seed Growers' Co. at this point can ripen crops of onion sets by June 1.

SECRETARY KENDEL suggests that the word "purity" be substituted for the word "quality" in the regular seed trade disclaimer.

ONION SET harvest at Chillicothe, O., will begin by July 10. The growers do not twist off the tops but rub them off on the screens when dry.

TRIUMPH radish is the present favorite among private buyers in France; its yield of seed is about 30 per cent less than the tip sorts.

LOS ANGELES, CALIF.—The Japanese truck growers are running out the Chinese in this section of the state, no new Chinese being admitted.

LAWRENCE S. PAYN, representing Andre Leroy & Co., Angers, France, is calling on the trade in their interest. He was a Chicago visitor June 29.

NEW HAVEN, CONN.—F. S. Platt has sold his store building for $75,000, netting him a profit of about 75 per cent after holding it less than two years.

JOHN LEWIS CHILDS reports the best mail order business since 1891, a period of 18 years. His newspaper advertising paid him well and Wonderberry was a winner.

ONE Chicago onion set firm is said to have in hand an order for 10 carloads from a single outside buyer. It would seem that Chicago is becoming the great central market for onion sets.

BUFFALO, N. Y.—The receivers of the Erie Preserving Co. have been offered $3,000 cash for the real estate and machinery belonging to the said company and recommend that the same be accepted.

AMERICAN varieties of beans are catalogued and fully described and illustrated with half tones and color plates in Bulletin 260, dated November, 1908, of the Cornell University, about 100 pages. This bulletin should be in the hands of every seedsman.

GUSTAVE JAENSCH has retired from the firm of G. Jaensch & Co., (Inc.) Aschersleben, Germany, and Lorenz Zopes has taken charge as first director of the concern. Mr. Zopes had charge of the seed department of J. C. Schmidt, Erfurt, for eight years and has since, for the past five years, conducted a seed business of his own under the name of Carl Kampf.

CHICAGO.—Contract prices on the board of trade June 16 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.—Visitors: Paul Rousset, Paris; J. Wutzinger, representing Conrad Appel, Darmstadt, Germany; H. L. Musser, of Aggeler & Musser, Los Angeles, Calif., and wife, on their way east on a two months' trip; H. G. Windheim, Omaha, Neb., returning from convention, via Detroit; Joseph Louis Schilder, Chillicothe, O.; C. F. Wood, Louisville, O.

NEW YORK.—C. Sackman of Vaughan's Seed Store, Chicago, sailed for Europe June 29 on the Holland-American liner Rotterdam. He will be absent until autumn in the interest of the firm he represents, and will cover leading points where the trade is well represented.—Henry Nungesser and M. Duryea, the bright lights of the big seed store at 65 Pearl street, came back from Niagara Falls well pleased with the convention. Since their return they have been almost too busy to talk, but say they had a good time, and they look it.—Vaughan's Seed Store, 25 Barclay street, has received the first shipment of Bermuda bulbs, consisting of freesias and oxalis. Harrisii lilies are expected on the next steamer about July 9.

President-Elect J. C. Robinson.

The new president was born in 1861 at West Hebron, Washington county, N. Y. His boyhood days were spent on a farm. He received a country school education with a finishing course at Fort Edward collegiate institute. From early boyhood Mr. Robinson developed an intense interest in the seed industry, his first experience being with seed potatoes. For a number of years he was secretary of the Washington county fair.

Mr. Robinson moved to western Douglas county, Nebraska, in 1886. After teaching school a short time he returned east and was married to Miss Mary C. Temple, of Granville, N. Y. In 1888 he established his present wholesale seed growing business, locating at Ashland, Neb., afterwards removing to Waterloo. By untiring energy and close application to business Mr. Robinson, from a small beginning, has developed a large industry. Personally, Mr. Robinson is affable in manner, considerate to all, broad minded, public spirited, and interested in every movement for the

welfare of his town and community. His family consists of Mrs. Robinson and four children, two boys and two girls.

The Seed Trade Convention.

During the afternoon session of June 22, Chas. N. Page of Iowa read that part of the report of the committee on legislation which covered state laws and the same showed a clear and comprehensive grasp of the question, evidently the result of much study. A committee to follow up this part of the committee's work will be named.

The auditing committee, consisting of Messrs. Bolgiano, Briggs and Corneli, found Treasurer Kendel's report correct. Messrs. Breck, Duryea and Phillips were appointed a committee on resolutions regarding the deceased members, Messrs. Flower, Rawson and Allen.

An informal talk was given by Edgar Brown as to the intentions of the United States seed department in Washington with regard to seed testing and the relation of that branch of its work to the seed trade. Incidentally Mr. Brown answered a numbere of questions touching on the relationship of the department to the seed trade.

THE BANQUET.

On Wednesday evening the annual banquet was held in the main dining room of the Clifton House, President Woodruff acting as toastmaster. Five-minute talks were made by Henry W. Wood, J. C. Robinson, E. L. Page, Geo. S. Green, Kirby B. White, Chas. Dickinson, S. E. Briggs, F. C. Woodruff, C. F. Wood, J. C. Vaughan, Arthur B. Clark, Curtiss Nye Smith, Harry L. Holmes and Chas. N. Page. Adjournment was then had to the large parlor, where J. Horace McFarland delivered his illustrated lecture on color photography, which was much curtailed because of the lateness of the hour.

On Thursday morning, at the opening, J. C. Vaughan, chairman of the committee on customs and tariff consisting of W. H. Maule, W. H. Grenell, C. N. Keeney and Benjamin Corneli, read his report for the year, indicating in summarizing that the wishes of the association for specific duties were apparently in a fair way to become accomplished in the new Aldrich bill. The report of the committee was accepted and endorsed.

NEW BUSINESS.

A communication from the secretary of the American Breeders' Association was referred to the new executive committee for action.

CLOSING SESSION THURSDAY AFTERNOON.

The election of officers resulted as follows:

J. C. Robinson, Waterloo, Neb., president.

M. H. Duryea, New York, first vice-president.

F. W. Bolgiano, Washington, D. C., second vice-president.

C. E. Kendel, Cleveland, Ohio, secretary and treasurer.

Leonard H. Vaughan, Chicago, assistant secretary.

Nominating committee for appointing executive committee and membership committee was named by the chair as follows: J. C. Robinson, S. E. Briggs, W. P. Stokes.

On their report the executive committee was chosen as follows: W. S. Woodruff, Orange, Conn.; G. S. Green, Chicago; Alex Forbes, New York; S. F. Willard, Wethersfield, Conn.; Charles N. Page, Des Moines, Ia.

For committee on membership the following were elected: Albert McCullough, Cincinnati, O.; E. L. Page, Greene, N. Y.; J. C. Vaughan, Chicago.

An informal ballot was then taken for choice of meeting place for 1910, the result indicating the preference of those present for Atlantic City, N. J.

President-elect Robinson was escorted to his chair by Charles Dickinson, and in a graceful and feeling manner accepted the office. Following this adjournment was had to the ballroom, where retiring President Woodruff was given a beautiful silver fruit service. The remarks of C. F. Wood who made the presentation speech follow:

"I have been asked on behalf of the committee of the members of the American Seed Trade Association to say a few brief words to you to express their appreciation of your filling the presidency of this association. We fully realize the numberless duties that have come to a position of this responsibility, and we do not know anyone who has filled it in a more fitting or becoming manner than your good self.

"The members have thought best to show their appreciation with a slight token of their regard, and have purchased for you these beautiful silver pieces to grace your board. They are sterling silver, and are intended to be emblematic; the sterling to represent the sterling worth of your character; the shining and polished surface to reflect back to the members of your family your worthy character and to radiate even to the members of this association. We trust you will live to enjoy them for many years."

CONVENTION NOTES.

The first informal ballot for president gave J. C. Robinson 48 votes out of a possible 54.

Members indicated their appreciation of Secretary Kendel's good services by increasing his salary.

W. H. Grenell pleased many of the visitors by taking them out in the local park in his Stevens auto.

Ex-President S. E. Briggs considered the convention, for practical business, the most successful held in recent years.

W. P. Stokes delivers on request a very interesting lecture with lantern slides on "Market Gardeners' Seeds and How to Grow Them."

A Lunzer, the well-known flower painter, is now over 70 years of age and has retired to Vienna, Austria, where he will reside in the future.

The McFarland Publicity Co., Stecher Litho. Co., and Brown Bag Filling Co. made very interesting exhibits of their work at the convention.

The reports of the legislative committee showed more than ever the necessity of every American seedsman joining the Seed Trade Association.

Ex-presidents of the society present were S. F. Willard, Chas. N. Page, T. W. Wood, Geo. S. Green, J. Chas. McCullough, J. C. Vaughan and S. E. Briggs.

An incident was mentioned in which one legislature passed a seed law with little or no consideration although three seedsmen were members of the legislature.

A society of state analysts seems to have been busy the past year promoting the enactment of restrictive seed laws in various states without regard to uniformity.

Bluegrass seed growers report 20 per cent damage to crops by recent rains; will likely cause a darker grade of seed to be harvested. Prices now $1.15-$1.30 per bushel according to grade.

The trade is asking what will be the result of the visit of three representatives in California at one time of the Burpee company: an entirely new strain of sweet peas in named kinds, or a branch Burpee house established at Los Angeles?

American Association of Nurserymen.

C. J Brown, Rochester. N Y., President; C M. Hobbs Bridgeport. Ind., Vice-President, Geo. C. Seagar Rochester, N. Y Sec'y. Thirty fifth annual convention to be held at St Louis or Denver June 1910.

THE McFarland Publicity Co. is sending out a series of very attractive photographic post card souvenirs of the Rochester convention.

PRESIDENT B. H. FARR of the American Peony Society was at Cornell last week working with a committee on nomenclature in the peony plot.

WOOD RIVER, NEB.—The Wood River Nursery Co., has given notice of an increase in its capital stock which is raised from $25,000 to $100,000, divided into 20,000 shares at $5 each.

Trees and Shrubs at Rochester, N. Y.

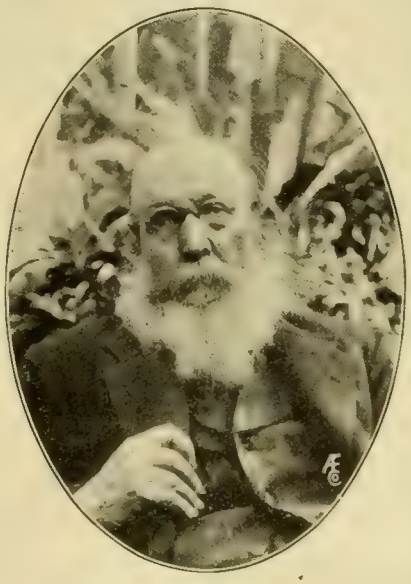
The present week has been remarkably hot and dry, with temperatures ranging in the daytime from 75°-88°, and the duration of all flowers has been short. We omitted to state in former notes that Paulownia imperialis with its showy pale lavender flower clusters was in full bloom about June 5. It flowered in great abundance this year and whilst it cannot be pronounced hardy in Rochester, there are several instances of trees 40-50 feet in height in well sheltered situations.

Cornus Kousa, which opened its first flowers on June 12, is still in good bloom, and is a remarkably beautiful small flowering tree. Whilst the most of its showy white-bracted flowers are conspicuous, a great many of them are hidden amongst the branches. The hybrid dogwood, C. Arnoldiana, is now in good bloom and has been since three to four days. C. candidissima (paniculata) was in good bloom on June 24. This is an excellent shrub for border plantations. C. Purpusi is just coming in flower, and is usually from three to four days behind C. candidissima. C. macrophylla came into flower on June 12, and was in good bloom from eight to ten days. The large flattish white flower clusters were very showy.

Magnolia Thompsoniana, which is a hybrid between M. glauca and M. tripetala, has beautiful white fragrant flowers, and was in full bloom on June 16. M. glauca, with smallish globular, fragrant flowers, was in full flower about the same time as the last. M. macrophylla, with fragrant flowers 10 to 12 inches across, came in bloom on June 19, and is now in good flower. A large well developed individual of this handsome magnolia grows in the home grounds of the Ellwanger & Barry nurseries. M. parviflora and M. Watsoni are still flowering. The tulip tree (Liriodendron tulipifera) was in full flower on June 18, and has still a number of blossoms.

Jamesia Americana, which came in flower on June 12, has still a number of lingering blossoms. The dense cymose clusters of pure white flowers, one-half to three-fourths of an inch in diameter, are very pretty, and the deep green oval leaves, about one and one-half inches wide and two inches long, densely pale pubescent beneath, on short stout stalks, are very distinctive. It has flowered very freely this season.

Spirea bracteata (rotundifolia of nurseries) was in full flower June 16. The white flowered umbels are showy. The roundish bluish green leaves which persist until late in the season, and its good habit render this an excellent garden shrub. S. canescens (flagelliformis) produces small white flower clusters along the branches, and is partly in bloom. It is not reliably hardy with us, but it will flower freely this season. A spirea under the name of Froebeli, which has been sold in some nurseries for a number of years, with flattish clusters of dull purplish red flowers is now in bloom. Physocarpus opulifolius, with its numerous umbels of spirea-like whitish flowers, is now in full bloom. This seeds abundantly and will become a nuisance if not watched.



James Hutchinson.

A large number of different forms of diervillas have been in bloom since June 1. During recent years the flowering period of diervillas has been much extended by the introduction of a number of showy early and late blooming forms. Le Printemps, Gracieux, Floreal, Fleur de Mai and Praecox, with flowers varying from rosy white to rosy red are some of the new forms that bloom in the first week in June. Amongst the best forms in bloom on June 16 were Rosea, with rosy red flowers; Candida, white blossoms; Teniers, wine-red flowers; Voltaire, deep rosy red blossoms with a tinge of purple; Stelzneri, rosy purple flowers; Abel Carriere, rosy carmine blossoms; Symondsii, very showy flowers in a mixture of rose and white; Van Houttii, reddish carmine blossoms. The late flowering diervillas are mostly in varying dark red colors in which the blood of D. floribunda seems to predominate. Amongst some of them are Lavallei, deep red small flowers; Gavarni, dark carmine blossoms; President Duchartre, deep amaranth flowers; Dr. Baillon, deep red blossoms; Montesquieu, handsome dark amaranth flowers; Othello, amaranth blossoms; Eva Rathke has deep carmine red, shading to amaranth flowers, is about the last to bloom, and produces flowers quite freely throughout the season. It has lately become a very popular shrub in gardens.

JOHN DUNBAR.

James Hutchinson, Pittsburg, Pa.

VETERAN PARK MAN RETIRES

We have pleasure in presenting a portrait of James Hutchinson, who, for 40 years, has been foreman of the gardens at the Allegheny park, Pittsburg, Pa. During Mr. Hutchinson's long incumbency he has gained the friendship and respect of thousands of residents, many of whom have known him from childhood and all of whom though regretting his absence from active participation in the work of the parks, wish him long continued good health and happiness in his retirement. Mr. Hutchinson comes of good gardening stock, his father, John Hutchinson, having begun to teach him the art at the early age of 10 years.

But to begin at the beginning our friend was born at Stockport Landing, on the beautiful Hudson river, in New York on October 22, 1829. Seven years after the family moved to Pittsburg, where Mr. Hutchinson, Sr., had charge of several of the gardens of people of wealth and prominence. James soon got interested in this work and recalls such names among his father's patrons as Charles Spang, of the Spang iron works; Gen. William Robinson, the first mayor of old Allegheny City, whose old homestead and gardens were at the foot of Federal street at Sixth street bridge. At the time of the great fire at Pittsburg in 1845 he was with the Hedge Farm Nurseries, owned by Murdock Bros., at that time one of the largest and most successful nurseries in existence. While with this firm his father was appointed superintendent of the Mount Union cemetery and he went to work with his father there and stayed until 1857.

In that year Mr. Hutchinson was married to Margaret A. Cheetham and he went farming, continuing in this line until 1863, when he again took up his landscape work and has followed it continuously until his retirement this year. From 1863 to 1869 he was with Thos. S. Clark, whose large and well arranged gardens were at that time a delight to residents in the aristocratic Oakland section of Pittsburg. On the death of Mr. Clark he went to the Allegheny City parks. At that time the old pasture or commons were being converted into a park, the improvement being under the control of a park commission incorporated for 10 years. It consisted of Archibald Marshall, Jonathan Gallagher, Wm. Lee, James Park, Jr., president of the commission, and the Hon. Alex Callow, mayor.

"From a pasture and dumping ground for ashes, tin cans, etc.," Mr. Hutchinson says, "it has grown step by step to be a thing of beauty and, I hope, a joy forever. There are ties and associations connected with the park that I dwell upon. December 14, 1878, I stood beside Gen. U. S. Grant when he deposited several shovels of earth upon the roots of an American linden, which I afterwards had the honor of finishing planting with the shovel which he had used. The tree

was recently cut down on account of decay. Tree culture is a very difficult problem in this park on account of the smoke from trains passing through it. There are a great many things I might add, but I feel that my time and space in your paper will not permit. To make a long story short, I have been almost 70 years in continuous service in the useful art of trying to make things more beautiful so that the present and future generations may live to enjoy the pleasures of our city parks. It was with great reluctance that I gave up my lifelong work." Mr. Hutchinson also sends good wishes to THE FLORIST, which we most heartily reciprocate and trust he may spend many happy years in the retirement which he has so well and truly earned.

American Ass'n of Park Superintendents.

A TRIP TO SEATTLE.

A very interesting trip, which about 50 have already promised to join, has been planned by the American Association of Park Superintendents on the way to its convention at Seattle, Wash., August 9-11 and Tacoma, Wash., August 12. The itinerary will take in many points of interest in Minnesota, the Dakotas and Yellowstone Park and full particulars can be obtained by addressing Theodore Wirth, superintendent of parks, Minneapolis, Minn. Those taking an evening train from Chicago Wednesday, July 28, will arrive about 8 a. m. in Minneapolis, in time to inspect the parks here and at St. Paul. Headquarters will be at the West hotel, Minneapolis, where a trip through the parks will be arranged, the party leaving Minneapolis over the Northern Pacific railway at 10:45 p. m., Thursday, July 29.

The convention opens at Seattle August 9 with an address from the mayor, to be responded to by John W. Duncan and after the business of the session an excursion to various parks will be given. Sessions will be held also on Tuesday and Wednesday, the election of officers taking place on the latter day, while on Thursday the meeting in Tacoma will be held and a trip to Paradise park as guests of the Tacoma park board will be enjoyed. Papers are expected from many prominent men in the association and a very good time is looked forward to.

Letters have been sent to park commissioners and eligibles not already members by F. L. Mulford, secretary-treasurer, asking their co-operation and inviting them to be present at this trip and convention, which should prove most enjoyable and profitable.

The exhibition of park photographs which has been got up for the Alaska-Yukon-Pacific exposition under the auspices of this association has now been put in position in the agricultural building of the exposition and comprises undoubtedly the finest collection of park views ever exhibited in this country. The scheme of such an exhibit was conceived by the president of the association, John W. Duncan, Boston, Mass., and all the leading cities whose superintendents are members of the association, readily responded with their quota of pictures for the exhibit. They will remain on exhibition until the close of the exposition.

CONVENTION PROGRAMME.

August 9—First session 9 to 12 a. m. in chamber of commerce. Address of welcome by the mayor of Seattle. Response by the president of the association. Reports of secretary-treasurer and general business. 1:30 p. m.—Excursion to Volunteer park, Interlaken drive, Washington park over Roanoke extension to Woodland park. 8 p. m.—Evening session. Reading of papers and discussion.

August 10—9 a. m.—Business meeting, reading of papers and discussion. 1:30 p. m.—Lischi park around Mercer island to Alaska-Yukon-Pacific exposition grounds, where the rest of the day will be spent.

August 11—9 a. m.—Business meeting, election of officers, choosing place for next meeting, and other unfinished business. 1:30 p. m.—visit to playgrounds along the boulevard to shore of Lake Washington and over the Bailey peninsula.

August 12 and possibly August 13 will be spent in the Paradise valley and in the city of Tacoma under the direction of the park board of that city.

Texas Nursery Inspection.

Austin, Tex.—In accordance with the new nursery inspection law, the inspectors of the state department of agriculture will on July 1 begin the inspection of the nurseries all over the state. While the department is able to locate the Texas nurseries, there has been so far considerable difficulty in ascertaining who the agents of the out-of-state nurseries are, and who have, and sometimes have not, a permit to do business in Texas. The new law requires the agents of these out-of-state nurseries to have credentials. These credentials must tell the domicile of the nursery in Texas, and the agent is made responsible for the nursery in this state.

100,000 PEONIES For Fall Delivery

All of the Leading Varieties from the COTTAGE GARDENS' FAMOUS COLLECTION.

Our enormous stock enables us to send out tubers of the very highest quality, and in filling orders we use undivided roots only—assuring an abundance of flowers the first season. This year we offer 1, 2 and 3-year plants.

GEO. WITTBOLD CO., 1657 Buckingham Place, Chicago

The Faculties of Plants.

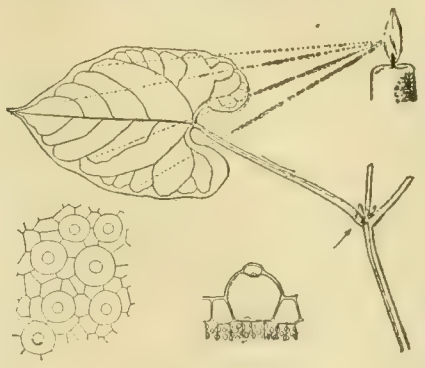
That plants are really alive is but grudgingly conceded by even the well-informed and when this concession is made, it is always with the mental reservation that while they may be alive after a fashion, yet their "aliveness" is not of the sort that characterizes animals. This prejudiced view finds its expression in various ways, among which may be included the habit of writing and thinking of plants as lower organisms, or perhaps as degenerates.

In order to appreciate the real place of plants in the world it is necessary to recall that they are composed of protoplasm, the common essential substance of plants and animals alike. Now, protoplasm has certain general primitive properties, which it exhibits no matter whether it be found in the leaf of a fern, the tip of a root, the trunk of an oak, the body of a horse or the brain of a man. In each of these cases, however, it has taken on other specialized powers, which enable it to perform the complicated work of the organism of which it forms a part.

PROTOPLASM.

Some time within the last hundred million years, or, to be exact, about sixty million years ago, says Dr. D. T. MacDougall, of the Botanical Department of the Carnegie Institution, in the Scientific American, protoplasm came into existence on the surface of the earth, in a manner wholly unknown. It was probably in the form of small specks or masses of a jelly-like substance of complicated structure, although not so complex as the protoplasm of today, and was extremely liable to injury by almost any force. By reason of its great fragility and complexity it was necessary that it make constant adjustments to the forces (such as heat, light, chemical activity, mechanical shock and contact) that impinged upon it. That it was capable of making adjustments made possible its continued existence until today.

It is impossible for us to retrace the long way back to this original stage of living matter and to ascertain all of the things it may have done in that day-before-yesterday of science. It may have started to solve the problems of existence in a score of ways not easily imaginable for us, but its forgotten failures have left no trace of their existence. Not that this primitive living matter consciously tried to find a distinct way of doing things, but in the very nature of its activity it must have done many things foredoomed to failure. Of the things that it did do, however, those that followed two general methods of procedure were successful, and by them the two main groups of organisms have been produced, which are no more to be compared than a telescope and an automobile, or an automobile and a warship, so different are they.



The Faculties of Plants.

Leaf Blade Receiving Rays of Light at a Stimulating Angle After the Signal Travels Down the Stalk to the Motor Organs. Epidermal Cells Which Converge the Rays and Are Sensitive to Oblique Rays.

The adjustments by which protoplasm fits itself more perfectly to its surroundings are guided by its primitive property of irritability, the power of perceiving changes in the intensity of the light rays playing upon it, in the degree of heat of the air around it, of the soil on which it rests, of distinguishing between dry and moist objects, and of reacting differently to hard and soft bodes in a way that generally adapts the living substance to endure, and make use of these factors.

IRRITABILITY.

Having this primal capacity, the long-continued play of evolutionary forces led gradually to its development into forms which would serve the organism better and better. Irritability has been developed in the animal into the senses, and with this development there has been a constant tendency to localize and seat the different phases of it in the specialized sense-organs, which deal chiefly with one class of forces. A moment's reflection will show that it is the specialized irritability of our sense-organs that guides us, as highly differentiated masses of protoplasm, in making the thousands of adjustments that enter into our daily activities.

Light is, perhaps, the most important factor in the existence of plants, since energy is absorbed directly from its rays and is used in building up complex foods from simple substances obtained from the soil and air. If the plant is to obtain energy from light, the supposition would lie near that it must present its surfaces to the rays in such manner as to enable it to do this advantageously, for the amount of benefit to be derived from the rays would depend directly upon their intensity, and upon the angle at which they strike the surfaces. With this fact in hand one would at once suspect that the plant might have developed some power of measuring the intensity and direction of the rays.

SCIENCE WORKS IN THE DARK.

If each of us were as large as a mountain and had the tiny organism, man, in an experimental laboratory for the purpose of testing his power of distinguishing light and darkness, we might go about getting at the facts in several ways. The readiest method would be to blindfold him. Not knowing anything about eyes we might suspect that the five-digitate antennæ he uses so vigorously and so variously might be able to perceive light. To test this supposition we would perhaps tie a cloth impervious to light around one arm, and seeing that he still could tell light from darkness we might swathe both arms. This test being a failure—and both the test and the failure are highly reminiscent of the ways of scientific work—we would remove the bandages from his arms and perhaps wrap them around his head, with the result that we would presently ascertain by what means this peculiar biped knew night from day.

The same method applied to a plant will lead to similar knowledge. Any

group of window-plants may be seen bending toward the glass in such manner as to present the broad upper surfaces of the leaves at right angles to the strongest illumination. The whole shoot appears to be concerned in the reaction, and we must use the blindfolding method to ascertain what parts are sensitive to light. If sheets of tinfoil are bound around the stem, and it is turned away from the window, the next day it will be found to have curved back toward the window. This shows at once that the individual under treatment perceives light without the aid of the stems, although the swathed

The Faculties of Plants.

A Grass Stem Prostrated by Wind and Raised by the Action of Its Motor Organs.

stems curve in the reaction. Next turn attention to the flowers if present, and when these are black-capped the plant still turns unerringly to the proper quarter to receive its daily dole of sunshine. The leaves are now to be considered as a seat of the light-perceiving faculty. In most cases these organs have a distinct stalk or petiole, and a broader blade, the chief purpose of the latter being to spread out in an expanse of green tissue, which entraps the rays and makes their energy available for the chlorophyl processes. Inclose the stalk of the leaf in tinfoil or black cloth, and the plant still turns its faces to the light, but sheathe the broad surfaces of the blade and it is truly blindfolded, and now does not turn toward the window when removed from it. Some plants, however, are capable of perceiving light in a feeble but much less accurate manner on portions of the stem and petioles.

If prepared sections of the blades of some of the more delicately reacting plants are placed under the microscope it will be found that the outer walls of the epidermal cells are curved outward, making lenses which converge the rays upon the inner walls, and allowing them to be transmitted to the cells beneath, where they play upon the green color-bodies in which the construction of food-material takes place. Imagine one of these epidermal cells to be a room with a convex skylight roof and a glass floor. When the rays come through and fall upon the floor they pass through to the room below, and drive the chlorophyl-mills making sugar and other substances. The lateral walls of the skylighted room are lined with a living layer sensitive to light, and if the leaf or the building is moved so that the rays strike the sensitive layer a signal is sent to a distant shifting mechanism. Slowly, but with unerring precision, this gets in motion and brings the leaf to a

ANNOUNCEMENT

BUSH HILL PARK, ENFIELD, MIDD'X, JUNE 1909.

Dear Sir:—

RE HUGH LOW & CO., (Dissolved)

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the **Royal Nurseries,** with the greater part of the stock. These nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business.

The staff which is transferred, practically intact, includes such well-known men as my representatives: Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook, Mr. Edward Tack as Orchid specialist and grower, Mr. M. C. Allwood, the enthusiastic Carnation man, Messrs. Moore, Reid and Meades, amongst the roses and fruit trees, and Mr. Phillips in the General Department.

I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and enquiries. Believe me to be always at your service as heretofore. Obediently yours,

STUART H. LOW.

Please address all communications to **STUART LOW & CO., Bush Hill Park, Enfield, Midd'x.**

PETER REINBERG, 1,800,000 Feet of Modern Glass **35 Randolph Street, Chicago**

position where the rays once more come through the condensing skylight and pass through the floor to the food-making cells below. In accordance with this action the plant moves all of its leaves into fixed positions, in which they receive the daily illumination most advantageously. In certain cases the leaf blade performs delicately gaged movements, by which it receives the rays until they become so intense as to be harmful, and then the surfaces are turned away from the source of the rays.

SENSITIVENESS TO LIGHT.

The exactness with which the plant can measure intensity of illumination is not to be easily realized, but the following test will serve as an exemplification: A small, rapidly growing shoot, such as that of a young mustard plant, is placed in a dark room for a few hours until it has lost all effects of stimulation from light. Then two standard candles are placed at distances of three yards on opposite sides and the sensitive leaves will receive stimulation of equal intensity on both sides and may remain stark upright. If one of the candles is moved an inch closer the shoot will begin to curve toward it as toward a window. The intensity of light varies as the square of the distance from its source, and it has been found that some plants can appreciate a difference so small as one three-hundred-thousanth of the intensity of a candle at a distance of a yard. It may be seen, therefore, that but a slight movement of one candle would be necessary to disturb the equilibrium of the shoot in the experiment in the dark room. Indeed it is difficult to place the candles correctly in the first place. It is needless to say that such delicacy of reaction is far beyond the capacity of the unaided human eye. Nor is the sensitiveness of the shoot confined to an appreciation of intensity, for a marked power of distinguishing colors is shown, and the plant responds differently to various portions of the spectrum. The blue and the red do not excite the plant alike, as it bends toward the source of the first and is indifferent to the second.

IMPULSE.

The tests described above indicate that the blades of the leaves chiefly receive stimulation from light, but an examination of almost any species shows that the curvature does not take place in the blades but at the bases of the leaf-stalks, or in the stems, in portions which may be a few inches or a foot away from the blades. In almost all cases the movement takes place in tissues more or less widely separated from the part which is sensitive to illumination. This may be proven conclusively if all of a plant except the blade of a single leaf be blindfolded and then subjected to illumination from one side. The curvature will take place in parts of the plant kept in darkness, and we are justified in concluding that the light-receiving or light-perceiving organs send some kind of an impulse or signal to the distant motor tissues which cause the movement.

Some species have upright leafy shoots, while others are creeping or decumbent. In either case the machinery of the organism is exactly adapted to return and hold the root and shoot in the characteristic position. The perception of position is not one of the keenest activities of the animal, but it is of very great importance to the plant, and the mechanism by which it perceives its relation to the vertical is one of the most delicate of all vegetable structures. The essential part of the apparatus consists of cells containing numbers of freely moving granules, which rest against the delicate layers of protoplasm which line the walls. When they are in contact with the wall of the cell which is normally lowermost the organ remains at rest. If the wind lays the shoot prostrate, or if a root is diverted from its course, the granules in hundreds of cells are thrown against the lateral walls and countless signals are sent to the motor zones, and curvatures ensue which bring the tips of the organs to their proper positions.

ROSES

A SPECIALTY.

The Dingee & Conard Co.,
WEST GROVE, PA.

SPRINGFIELD, ILL.—Geo. Brinkerhoff has been sick for several days.

WHITTIER, CALIF.—Preliminary arrangements are being completed for the annual flower show, under the auspices of the Woman's club, that was so successful last year.

LOS ANGELES, CALIF.—Everett Crippen, a gardener, about 40 years old, ended his life with a bullet in a rooming house at 622 Maple avenue, June 25. The cause given is that he felt disgraced because he had been arrested on a charge of drunkenness. Crippen was taken into custody and placed in the city jail June 17 and he had worried about it since he was released upon the payment of a fine. Crippen's divorced wife and 15-year-old son reside in Washington, D. C.

MORGANTOWN, W. VA.—Lucetta B. Imbach, the seven-year-old daughter of Prof. Theo. F. Imbach, floriculturist at the West Virginia Experiment Station, died June 19 from a complication of diseases following scarlet fever. Her knowledge of shrubs and greenhouse plants was way above the average florist's. She could name more than 1,000 plants; they always were her playthings. She was laid away in flowers, as they seemed to come from everywhere. They were the largest collection ever seen here. The parents have the sympathy of all.

BAY TREES

(LAURUS NOBILIS.)

NEW YORK.

Cleveland.

SEASON OVER.

The busy season is now at an end as there will be no holidays of note until Thanksgiving. Everybody is talking vacation and the coming convention, at which, from the number heard from, this city is to be well represented. Remodeling and changing stores and offices to better the facilities are now the most important things on the docket. The past week has been a fairly good one. This week has shown a very heavy glut in carnations, and even the street fakir has turned away from them, saying there has been no business. The quality also has suffered considerably on account of the very hot weather, and we are all looking forward to the end of the crop, as people become tired of the flowers they have purchased all winter. Peonies are done for, only storage stock of limited quantity being available. Water lilies are in good supply, but owing to the large quantities of peonies and carnations have had not much call as yet. Shasta daisies, coreopsis and outdoor peas are coming in strong. Iris is plentiful, but the call limited. Roses of all kinds are showing the effects of the hot weather, making them harder to move and lower in price.

NOTES.

— Jones and Charles Russell of the Gasser Co. have leased the store on the corner of Euclid and Huron road, and will start a first class retail store this fall. This is going to be a good location as all the big stores are locating near by.

Westman & Getz have added a delivery outfit, a horse and wagon, which means increased facilities for handling their business.

The street fakirs are in their glory now as they can get all the flowers they need at very low prices.

Several west side retailers are still keeping up their carnation sales, which moves considerable stock.

P. J. Bauers, Superior street, has used considerable smilax lately owing to church festivities. C. B.

GERANIUMS

"Are a Specialty with Us."

A gentleman well known in the horticultural world said a few days ago when looking over our place, that, "generally when we think of 'Vincent' we think about 'geraniums.'" That is all very well, but what we want you to do is when you think about "geraniums" to think about "Vincent," and if you will think about what you are going to grow next season, and will write us we will give you a special price that will interest you to the extent that we will have your order booked by return mail. This will enable us to gauge our propagation to better meet the demand.

The collection we are offering for next season will without a doubt be the best commercial collection ever offered to the American trade.

Easter will come early next spring, March 27th, so you will want to get your geraniums in good time; and by the way, is there not more sure money in good geraniums than some other stock generally grown for Easter?

For Immediate Shipment.

We will send 1000, 50 each of 20 good distinct kinds, our selection, in either single or double, from 2-in. pots, for $18.50; from 3-in. pots $25.00.

——Cash with order.——

R. Vincent, Jr., & Sons Co., White Marsh, Md.

J. C. SCHMIDT, Bristol, Pa.

Buffalo.

A BUSY WEEK.

The past week has been one of fine weather and a busy one. School commencements and weddings were very much in evidence and all are satisfied with the business considering that some schools forbid flowers of any kind at the commencements. But we expect to overcome that another year. Greenhouse trade is about at an end and the growers will now proceed to repair and get things in readiness for fall and the S. A. F. convention. Sweet peas are coming in now and are of the very best, both in color and quality. The curtain has been rung down on good Bride, Bridesmaid and Killarney roses and next week will see the Kaiserin and Carnot coming in, which are very acceptable to the trade. Some fine Spanish iris has been on sale in the stores.

GERANIUMS..

Rooted cuttings of Ricard, Poitevine and Nutt all the year 'round. Summer prices. $1.00 per 100.

Smilax and Sprengeri

$15.00 per 1000; $1.50 per 100.

HARDY PHLOX

A very choice salmon pink one of the best and showiest varieties, rooted cuttings at 65c per 100; $5.00 per 1000

Cash with the order.
Honest samples sent free.

Henry H. Barrows & Son, WHITMAN MASS.

Washington.

ONLY FUNERAL WORK.

The extreme heat of the past week has caused society folk to depart rapidly, and in consequence business is practically at a standstill, excepting funeral work. July 5 is the day set for the floral automobile carnival, and handsome prizes are offered for the best decorated auto. The idea was born in the columns of the Washington Post, and there is only one objection that the Washington florists have and that is the shortage of flowers. If the carnival were held at the latter part of August or early September there would have been an abundance of wild flowers, aside from the numerous quantities of dahlias, hydrangeas and other outdoor stock, which cannot be secured now. Another bad feature is that this is about the hottest time of the summer and the flowers will in consequence suffer, which will be a great handicap to the beauty of the floral decorations.

The friends of W. R. Smith of the United States Botanic Gardens are anxious about his recovery. He has been seriously ill for some time. He has received the following letter from Scotland which explains itself:

"The Carnegie Dunfermline Trust,
"Dunfermline, January 24, 1908.

"W. R. Smith, Esq., Superintendent National Botanic Garden, Washington.

"Dear Sir: I understand that Dr. Ross has already written to you with reference to the delivery of a parcel of trees and shrubs, including specimens of the Crittenden peace oak, for the decoration of Pittenerieff park and glen. I have been directed by the trustees, at a meeting held yesterday, to convey to you an expression of their high appreciation of your kindness in showing so practical an interest in the decoration of a park gifted by Mr. Carnegie to his native town. They recognize that there is a special appropriateness in the inclusion of specimens of the Crittenden peace oak, and note your suggestion that they should occupy a prominent place and be planted with suitable ceremonial. The trees will be valued as a memorial of the efforts made by Mr. Carnegie in the interests of peace, and the trustees hope that when full grown they will be not merely memorials of past efforts in the cause of peace, but also witnesses of gratifying results.

"Again thanking you for your kind interest in the work of the trustees, I am, yours respectfully,

"WILLIAM GEORGE."

Foley ventilating apparatus, unexcelled. Send for circulars and estimates. The Foley Mfg. Co., Western and 26th St., Chicago.

If You Do Not Find What You Need in Our Ready Reference Department, Write Us About It

Nashville.

FLOWERS VS. HIGHBALLS.

The trade in this city is making a wry face at the new additional ad valorem tax imposed by the past legislature. The said legislature banished liquor from the state's borders, getting rid of the revenue, but not suppressing the strong drinks. Realizing that there was likely to be a deficit in the state's finances these wise solons cast about them for other fields to conquer (financially). The unfortunate florist, under the head of luxuries, was one of the first to fall under the eye of the aforesaid solons, and forthwith a new tax was levied and all florists will have to toe the mark.

BEDDING PLANT TRADE GOOD.

There has been such continuous rains that no outdoor stock has had a chance to make good. Sweetpeas have rotted in the ground, Asters are doing fairly well but have not attained to any great size in this latitude. After the rains let up there will come a blistering sun to scorch and burn and keep from perfection any summer blossom. Summer flowers are always poor here owing to the above conditions. Almost everything under glass has been torn out to make way for new plantings. Carnations have dwindled in size and are now nearly all removed from the benches. Gladioli seem to be doing well and there is still a small supply of fairly good roses. Notwithstanding the comparatively poor quality of flowers trade has been good. June weddings have served to create a fairly good demand for flowers and church decorations. Plant stock was good and those who handled it were very well satisfied with the season's business. The prices on bedding stock were somewhat lower but the volume of trade was larger than in former seasons and the aggregate sale in money greater. M. C. D.

NEW ORLEANS, LA.—Otto Werner has now no further interest in Fred Ziegler, Jr.'s business, financial or otherwise.

A BAD WEEK.

A bad week from almost any point of view is about all that can be said of the past seven days. June weddings and commencement orders especially did not come up to expectations. We had thought the American Beauty market would be stronger than the preceding week as there were several large commencement exercises scheduled, but it was probably weaker if anything. Naturally carnations do not cut much figure any more; there are really very few fine ones on the market. In roses, Kaiserin is the only one that gives satisfaction. Bride and Bridesmaid are very poor, and while Killarney shows good form, the flowers blow open almost as soon as Richmond, which is now worthless because of that fault. There are still plenty of storage peonies offered and quantities of lilies, lily of the valley and sweet peas.

NOTES.

The writer is not an authority on contagious diseases, but feels certain that the matrimonial fever is one. It has broken out among the wholesalers to an alarming extent. The last victim is W. Q. Potter, member of the McCallum Co., who was married to Miss Alice Davies of Hazelwood June 24. The ceremony took place quietly at the Church of the Good Shepherd of the same place. The couple immediately left for the northern lakes for a month's stay. The Allegheny market is also being infected, Louis Beil of E. C. Ludwig's being married June 30 to Miss Lena Goettmann of Spring Garden.

Miss Forbes of Forbes & Donahey, Wheeling, celebrated her fiftieth anniversary June 29 by having an informal garden party at her home, to which all her friends were made welcome. The decorations were made up in Japanese style.

A move in the right direction is the announcement of The McCallum Co. and the Pittsburgh Cut Flower Co. that they will close during July and August at 5 p. m. excepting Saturday.

Theo. Beckert, Neville Island, is cutting some gilt edge sweet peas which are being handled by the Pittsburgh Cut Flower Co. and The McCallum Co.

The next meeting of the Florists and Gardeners' Club will be held July 6 at the McCallum Co., 937 Liberty avenue.

C. Cramer, president of the South View Floral Co., died June 24 after a protracted illness.

J. B. Murdoch & Co. have been handling some very nice American Beauty roses.

E. Ashcraft started the vacation season at the Pittsburgh Cut Flower Co. June 28.

A. W. Smith is around again after being laid up with typhoid for several weeks.

The Florists' Exchange is handling a nice lot of storage peonies. J.

FLOWERS FOR COMMENCEMENTS.

At the last meeting of the board of education a delegation of representative florists of the city appeared before the board to protest against the recent ruling that no flowers be sent to the halls in which school commencements were scheduled to be held. The delegation pointed out that the ruling would work a great hardship to members of the trade in the city. It was pointed out that many orders had been booked with only the instructions to deliver the flowers at the commencement exercises, and that it was not possible in all cases to deliver them to the homes. The florists also said that if the board insisted upon enforcing its order many of the customers would countermand their orders. The board modified its position to the extent of not making the order effective until 1910.

A meeting of the various sub-committees of the flower show to be held in November was held on the evening of June 24. The chairmen of many of the committees reported progress. The subject of the show will be further discussed at the regular monthly meeting of the Florists' Club in July.

F. M. Briare and Geo. Russell, of Whittle Bros., spent last week at Williamstown, where they arranged the floral and other decorations in use during commencement week at Williams' college. This is the ninth consecutive year that the two have been to Williamstown.

Miss Winifred Goldring, daughter of President Frederick Goldring of the Florists' Club, is an honor graduate this year at Wellesley. Following the announcement of her rank in the class came a notice from the faculty of her appointment as instructor in geology in the college. R. D.

San Francisco.

TRADE QUIET.

Business since Decoration day has fallen off considerably; with the exception of the school commencements and a few June weddings, there has been little doing. The most of the flower buying people are off to the summer resorts and the florists may as well take a vacation, and take a good rest, so as to be ready for the business for the coming season, which everybody confidently expects to be very good. All flowers seasonable for this time of year are very good and can be bought at very low prices. Roses are about the only flowers which are not very plentiful and in consequence bring fair prices. There are quite a few orchids, especially cattleyas, in the market but these always sell at the uniform price of 60 cents each, owing to a combination of orchid growers in this vicinity.

NOTES.

R. Schmidt, the well-known rose grower of Berkeley, is bringing in some very fine American Beauty roses for which he finds a ready sale. He has lately acquired the Blanding avenue nursery, Alameda, which he will run in connection with his place in Berkeley.

Quite a number of the Italian growers in this vicinity have been putting up new greenhouses to be used for the growing of adiantum and asparagus, for which there is always a great demand on the Pacific coast.

Messrs. Schmitz & Dobner of Stockton were in town a few days ago; they are reporting business as being very good this last season. They are about to construct another greenhouse this summer.

N. Peterson is off on a fishing trip to Lake Tahoe and is, according to latest reports, keeping the express company busy with shipments of fresh trout.

H. Plath, of this city, is reporting a great many orders for fern seedlings from flats, of which he has about 150,000, all in fine condition.

R. Groves has had to undergo an operation at the hospital, but is improving rapidly.

P.

KANKAKEE, ILL.—Faber Bros. are building new greenhouses on the north end of their present plant.

MARQUETTE, MICH.—T. M. Sorensen, proprietor of the Stafford greenhouses, has leased and opened a retail store.

LOUISVILLE, KY.—Mrs. M. D. Riemers leaves early this month for a western trip accompanied by friends. The Seattle exhibition will be visited as well as Vancouver, Portland, Ore., San Francisco, Los Angeles and Catalina island, returning via Salt Lake City.

USE MOREHEAD

Return Steam Traps

KALAMAZOO, MICH., July 7, 1908.

MOREHEAD MFG. CO., Detroit, Mich.

Dear Sirs:—If your trap cost ten times what you ask for it it would be cheap when time, labor and cost of repairs are considered, in comparison with the steam pump I had installed before getting your trap.

I cannot praise it too highly and I recommend it to everybody who talks steam.

Yours truly, (Signed) F. W. MEYERS, Prop. Riverside Greenhouses.

Catalogue on request.

MOREHEAD MFG. CO., 1047 Grand River Avenue, Detroit, Mich.

Davenport, Ia.

The Tri-city Florists' Club held its annual strawberry social meeting June 24 at Floral Hill Gardens, the home of Theodore Ewoldt, with nearly every member present, all making the trip in automobiles. The evening subject for discussion was "Poinsettias, Their Propagation and Growing." The president appointed a committee of three to make all necessary arrangements for the annual picnic. A. Anderson of Moline, Henry Gaethje, Jr., and Henry Pauli of Davenport, compose the committee. The picnic is to be held between July 15 and 22. After other routine matters were disposed of the club adjourned to the dining room, where everything was in readiness for the annual contest, that of trying to see who could dispose of the most strawberries. A. Anderson, the last year's champion, was not in it this year, and after a lengthy discussion as to on whom the honors should fall the members all agreed that John Temple was duly entitled to the honor of being the champion strawberry eater for the year 1909. After an hour of story telling and a few cigars the club adjourned, thanking Mr. Ewoldt for the pleasant entertainment provided for them. T. E.

ST. LOUIS, MO.—Miss Lottie Schiess, proprietor of The Easton Florist, a retail depot, is doing a remarkably good business.

MONTICELLO, IND.—Cloyd Switzer, late of Frankfort, is building glass here and will go into the growing business quite extensively.

KOKOMO, IND.—W. W. Coles is now at Oden, Mich., where he says he will remain for two or three months catching some of the big fish after completing his summer cottage. Mrs. Coles will join him there this week.

Greenhouse Building.

St. Louis, Mo.—C. Meyer, one greenhouse 28x120; Philip Goebel, one house 20x100; Gus Hartmann, one house 17x 100 feet; Edwards, four houses 18x100 feet; W. M. Meyer, one house, 18x100 feet, and W. R. Greb, one house 18x 70 feet.

Nashville, Tenn.—Joe Browne, one greenhouse; Geny Bros., three rose houses, each 28x185 feet, and one propagating house.

Baltimore, Md.—Lehr Bros., two greenhouses 30x250 feet; B. G. Merritt, two greenhouses 32x125 feet.

Montreal, Que.—Deguire Bros., Cotes de Nieges, one greenhouse; Hall & Robinson, one greenhouse.

Kirkwood, Mo.—F. Ude, four greenhouses 16x100 feet each.

Islip, N. Y.—H. K. Knapp, one greenhouse 40x100 feet.

Patchogue, N. Y.—Geo. Terry, one greenhouse 30x70 feet.

Marshalltown, Ia.—Welter & Co., one greenhouse.

East Rochester, N. H.—E. A. Corson, one greenhouse.

Monticello, Ind.—C. Switzer, one greenhouse.

St. Louis.

SEASON OVER.

The closing exercises of schools, June weddings and a few other social events brought the season to an end and now we can look forward to the dull season which lasts three months. About the middle of August some of the down-town theaters will open up their fall season and not till then will there be anything stirring. Funeral work will be about the only outlet for flowers. Carnations have advanced in price and anything fancy is bringing two cents. Quite a few good American Beauty roses are in and are offered very cheap. Sweet peas have been selling fairly well and are being used as much as possible in design work and in bunches. Asters are now coming in, but no fancy varieties. Sweet peas are now getting scarce and with the continuance of hot weather will soon be a thing of the past. Ferns are increasing in quantity and have a downward tendency.

NOTES.

Nick Himmer and family of Meramac Highlands is going to Europe. Nick is a hard worker, disposes of his cut himself, daily going from florist to florist in the west end. Nick must have certainly done a profitable business.

The flower show to be given this fall by the Horticultural Society will be held at the Coliseum. This show promises to be the best and largest ever given here.

Miss Meyers, bookkeeper at Geo. Angermueller's is stopping at the Park hotel in the county for the summer. She is a frequent visitor to Delmar garden.

Julius Schaffer has returned from a visit to Germany to his father and is now located at Adolph Brix'. He expects to start up a place this fall.

Fred Bruening has a fine stock of Whitmani and Boston ferns; he is cutting quite a few carnations from his farm at Columbia, Ill.

John Seketer has given up his shop for the summer. He sold all his stock of made up wire work to Wm. Smith Wholesale Floral Co.

The ball game at the picnic will probably be played between the teams of the Bentzen Floral Co. and Young & Sons.

C. A. Kuehn is receiving some of the best carnations seen in this market at this season.

H. C. Weber, Theodore Miller and their wives and daughters have left for Europe.

H. G. Berning is handling some of the best sweet peas coming into this market.

Ostertag Bros. were quite busy during the past week with June weddings.

W. F.

Value of Forests for Water.

Experiments will be conducted in California by the forest service to determine the exact relation of forests to stream flow, a question of vital importance to southern California, where the supply of irrigation water depends on the reserve in the mountains. This question arose last year when forest fires were raging, and some persons asserted that forest growth had little to do with holding rainfall in the ground.

Forest officers, who have had an opportunity to observe results, asserted that where mountains and hills are barren of tree growth, the rainfall not only runs to waste, but resulting floods greatly damage fields on which they carry debris. These observations have been general in character heretofore, but now the forest service will determine to a certainty just what the tree growth does in preventing floods and retaining rainfall.

The experiments will extend over a number of years. Two watersheds will be chosen in the different forests of California, preferably having an area of not more than 200 acres, one of them to be covered with dense forest and the other to be devoid of forest growth or only sparsely wooded. Rugged topography and rocky or clayey soils will be sought, and the areas will be as near together as possible, in no case more than eight miles apart.

Near the mouth of each stream which drains each watershed will be built small dams, with sluices, at which the stream flow will be measured by self-registering instruments. On each watershed will be established ordinary rain gauges at the lowest, intermediate and highest points, and one automatic rain gauge. The springs within each watershed will be located and numbered. Within the lower course of the streams there will be constructed wooden sluice boxes for catching and determining the amount of sediment carried by them. A number of borings will be made at various points within the watersheds to determine the fluctuations of the ground water and evaporation measurements will be taken. An effort will be made in conducting these experiments to account for every drop of water that falls on the watersheds so that definite data for comparison should be obtained within a comparatively short time.—Los Angeles Express.

THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas."

Vol. XXXII. **CHICAGO AND NEW YORK, JULY 10, 1909.** **No. 1101**

THE AMERICAN FLORIST

TWENTY-FOURTH YEAR.

Copyright, 1909, by American Florist Company.
Entered as Second-Class Matter Nov. 11, 1891, at the Post Office at Chicago, Illinois, under Act of March 3, 1879.

PUBLISHED EVERY SATURDAY BY

AMERICAN FLORIST COMPANY,

324 Dearborn St., Chicago.

Long Distance 'Phone: Harrison 7465.

Eastern Office: 1133 Broadway, New York.

Philadelphia, Pa.: Robt. Kift, 1725 Chestnut St.

Registered Cable Address: Amerflo, Chicago.

Subscription, United States snd Mexico, $1.00 a year; Canada, $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from the trade. Volumes half yearly from August, 1901.

Address all correspondence, subscriptions, etc., American Florist Co., 324 Dearborn St., Chicago.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

OFFICERS—J. A. VALENTINE, Denver, Colo.; Pres.; E. G. GILLETT, Cincinnati, O., Vice-Pres.; W. N. RUDD, Morgan Park, Ill., Sec'y; H. B. BEATTY Pittsburg, Pa., Treas. Next meeting at Cincinnati, O., August 17-20 1909.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

Annual meeting, August 9, 10, 11, 1909 in Seattle, Wash. and August 12 in Tacoma, Wash. JOHN W. DUNCAN, Boston, Mass., President; F. L. MULFORD, Harrisburg, Pa., Secy.-Treas.

CHRYSANTHEMUM SOCIETY OF AMERICA

Annual convention and exhibition, November, 1909. ELMER D. SMITH, Adrian, Mich., President; C. W. JOHNSON, 918 Kishwaukee St., Rockford, Ill., Secretary.

THE AMERICAN CARNATION SOCIETY.

Next annual convention and exhibition at Pittsburg, Pa January 1910. ALBERT M. HERR, Lancaster, Pa., President; A. F. J. BAUR Thirty-eighth St. and Senate Ave., Indianapolis, Ind., Secretary.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

THE FANCY LEAVED CALADIUMS.

I.—BY ARNO NEHRLING.

Introduction.

In taking up the study of the species and varieties of caladium, the writer found great confusion in the nomenclature. Considering that there are about 2,500 named varieties cultivated this does not seem at all strange. But in making a closer study, we find that, even in our old varieties, there is a great deal of confusion. Although the culture and development will be taken up in this paper the writer has worked with the object of eliminating this confusion. This has been made possible principally through the extensive library of the Missouri Botanical Garden, further through the extensive collections of the caladium specialists, Adolph Lietze, Rio de Janeiro, Klissing & Son, Barth, Germany, Adolph Jaenicke, Floral Park, N.Y., Theo. L. Mead, Oviedo, Fla., and Henry Nehrling, Gotha, Fla., the latter having in his own collection over 1,500 named varieties collected from all parts of the world.

History.

The order araceæ, to which these plants belong, is essentially a distinct class, the largely developed bract enclosing the organs of reproduction forming a feature that separates them from all other forms of vegetation. They are principally natives of hotter climates, though there are some which inhabit the more temperate regions. According to Index Kewensis the genus comprises about 41 species, 33 of these being described as natives of South America, two of the Philippine islands, two of the East India islands, and four with the habitat unknown.

Caladium bicolor, or Arum bicolor as it was first called, was not known by Linnæus. It was introduced in 1789 and it is from this species that most of our present varieties originated. Ventenat, with this species as a basis, established the genus caladium in the year 1800. He reports that it was discovered by D. Commerson in 1767 in the neighborhood of Rio de Janeiro. Kunth in 1841 described four more species and Regel in 1857 described two species or varieties. But the real caladium epoch began in 1857. About December in that year, Baraquin and Petit brought a collection of tubers to Europe, which they had collected at Para on the Amazon river. Some of these reached the hands of that enthusiastic plant grower Antoine Chantin, of Paris. In this collection were C. Chantini, C. Baraquini, C. Verschaffelti and the beautiful little C. Humboldti (C. argyrites). Later he added to this collection C. Neumanni, C. argyrospilum, C. Brongniarti, C. Houlleti, C. hastatum and C. picturatum. These species (according to Index Kewensis not all true species) were described by Lemaire and illustrated in Illustration Horticole and Flore des Serres (1856-1865).

These beautiful tropical foliage plants created a sensation in France and Belgium, and were admired by all plant lovers. Chantin attempted to distribute them, and for this reason he took a collection to London the next spring (April 1858) and exhibited them at St. James' hall. Here they were also showered with exclamations of wonder and delight. Dr. Lindley described them in the Gardeners' Chronicle (1858—page 314-317) but the descriptions were rather short. The next year they were again described in this publication, (1859—page 602) after a certain writer had expressed himself doubtful in regard to Chantin's honesty. As already stated some of the species mentioned were not considered true, and it was in regard to these things that Chantin's honesty became questioned.

Louis van Houtte (page 751) upheld Chantin in regard to the new species and varieties. C. Baraquini, which was at that time classed as synonymous with C. bicolor by some authors, was described by him as being entirely different, hence a true species, the difference being apparent in the color of the foliage, veining and color of the stem. He also describes C. splendens as being vastly different from C. bicolor. In his further descriptions he mentions C. thripedestrum as being identical with C. marmoratum. C. Belleymei, C.

Troubetzkoyi and C. Perrieri are three others described by him as beautiful and distinct species. He also describes all the species and varieties found in cultivation at that time. The following were included in this list: C. argyrites, C. hastatum, C. picturatum, C. bicolor, C. Troubetzkoyi, C. argyrospilum, C. splendens, C. marmoratum, C. Baraquini, C. pœcile, C. Chantini, C. discolor, C. Houlleti, C. Belleymei, C. Perrieri, C. Neumanni C. Brongniarti, C. Verschaffelti and C. pictum. Within the next few years the following were added to this collection: C. albo-maculatum, C. Leopoldi, C. Sieboldi, C. pellucidum, C. Devosianum (C. Wallisii), C. hæmatostigmatum, C. regale, C. mirabile, C. Duchartrei, C. Wighti and C. Curwadli. Here it may be of interest to note that most of these varieties are still found in cultivation. All just mentioned belong to the C. bicolor group, and are considered varieties by Dr. Engler.

WALLIS' REPORTS.

About this time Gustav Wallis, the celebrated plant collector, reported that the forests along the lower Amazon are covered for miles and miles with these beautiful leaved plants during the rainy season. From this it seems quite evident that not only species, but also varieties, were collected and introduced. Bates, the naturalist, also reports a number which he saw in the Para regions. Among these were C. picturatum, a species with blue green foliage and dark red midrib.

It has never been known whether Chantin, the first known cultivator of this genus, attempted hybridization. But Louis van Houtte obtained a number of hybrids through cross-fertilization, many of which are still in cultivation. Among these were: C. Bohemicum, C. Jules Putzeys, C. Leopold II, C. Lindleyanum, C. Marchandi, C. Skopetzianum, C. Rodeckii, C. Reichenbachianum, C. Petschkaui, C. Lindleyanum, C. Ortgiesii, C. Thelemanni, C. Fenzlianum and C. Endlicherianum. Eight of these varieties are in Henry Nehrling's collection and are as pretty as some of our recent productions.

In the year 1860 Alfred Bleu of Paris, who was an enthusiastic plant lover, was struck with the idea of crossing some of the original species. He did not intend to make a business of this work, but the events of the war of 1870-1871 forced him to take up the culture for profit. All who are acquainted with the varieties of this beautiful genus know that he was most successful. In 1867 he exhibited a collection at the world's fair in Paris and through this collection he became universally known. Triomphe de l'Exposition, which is still considered one of the most exquisite varieties, was in this collection. Most of his productions are classed under the bicolor group. Up to the year 1902 Mr. Bleu raised hundreds of good varieties. Some of the best among these are: Gaspard Crayer, Le Hrubyanum, Candidum, Faust, L'Automne, Mme. Fritz Koechlin, Mme. Marjolin Scheffer, Mons. J. Linden, Onslow, Mme. de Vigier, Mr. d'Halloy, Rubens, Alfred Mame, Annibal, Clio, Auber, Beethoven, Diana, Edouard Moreau, Eucharis, Euterpe, Halevy, Gretry, Mme. Groult, Felicien David, L'Insolite, Gaze de Paris and Mme. Alfred Bleu Major. A few with exceptional merit and beauty, but rather difficult to propagate, are: C. Ibis Rose, Mrs. Harry Veitch, Michel Buchner, LaLorraine, Ville de Hambourg, Cardinale, B. S. Williams, Charlemagne, Maria Mitjina, Oriflamme, John Laing, Alice Flemming, Puvis de Chavannes, Souv. de Louis van Houtte.

BAUSE'S VARIETIES.

A few years later (1873) C. F. Bause, a German gardener at the Royal Horticultural Society of England's gardens at Chiswick, developed a number of beautiful varieties. Among these were a few yellow varieties, which were lost and up to the present time no one has been able to duplicate them. Some of his best varieties are: Golden Queen, Prince of Wales, Princess of Wales, Princess Royal and Princess Teck. In the early nineties Mr. Bause resumed his hybridization experiments. From 1895 to 1900 he distributed many beautiful and distinct hybrids through James Veitch & Sons of Chelsea, Eng. F. W. Moore, probably one of the finest red varieties ever produced, was among this assortment. Some of the others which are still found in almost every collection are: Ladas, Lord Derby, Silver Cloud, Sir William Broadbent, Sir Henry Irving, Lady Mosley, Mrs. Joicy, Mrs. Luther, Mrs. Bause, Mrs. Iceton, Pantia Ralli and Ellen Terry. Exquisite colors and medium growth are two characteristics of these English varieties, but their culture is rather difficult.

Arno H. Nehrling.

Another German gardener, Jacob Weiss, who was in the employ of the Duke of Pamela, Portugal, exhibited a collection of varieties which were entirely different from anything thus far mentioned. This was in 1879, and the exhibition was held at Oporto. These varieties represented a new type and were hybrids of C. erythræum. The leaves of this type are partly cordate, hastate and sagittate, and without appendages. In the Garden for 1879, page 65, eight of the varieties belonging to this type or group are illustrated and described.

Adolph Lietze, a highly educated German who settled at Petropolis near Rio de Janeiro in the year 1857, is the greatest of all the caladium hybridizers. In 1875 he began his cross fertilization experiments, and here it may be well to say that his productions excel anything elsewhere produced. Through his beautiful varieties, which soon spread all over the world, he became known as the caladium king. He has grown hundreds of new varieties, one excelling the other in beauty. His experiments were conducted on a scientific basis and every variety can be readily traced to its parentage. The catalogues which he published from time to time are extremely interesting. In these he divides his productions into 10 classes (from A to K), which is a very practical and systematic method. In 1893 about 100 of Mr. Lietze's varieties were on exhibition at the World's Columbian exposition in Chicago, and created a sensation. In recent years he has produced hundreds of new varieties, most of them outrivaling anything heretofore produced. Mr. Lietze also tried to use the pollen of several species of alocasia in his cross-fertilization experiments, but he only succeeded in crossing several caladiums with Alocasia plumbea. Caladium Bendego and C. Juripari-tata are two varieties which disclose the parentage of alocasia.

Mr. Lietze died in December, 1907. Among his older varieties the following might be mentioned as having exceptional merit: Arassuahy, Acary Bilontra, Hortulania, Adamastor, Mrs. John Laing, Dona Carmen de Macedo, Barao de Mamore, Dr. Augusto de Castro, Putomayo, Aymore, Freze de Maio, Mossoro, Diamantina, Periquito, Guararpema, Purus, Bendego, Roncodar, Timbyra, Imperatriz Thereza, Don Pedro de Alcantara, Benjamin Constant, Ouro Fino and many others. His newer productions are far superior in color to any of the varieties just mentioned. The following is a list of 25 of his finest new varieties: Anajutuba, Melgaco, Itapagibe, Tibirica, Camaragibe, Manricio de Nassau, Blumenau, Campos Salles, Bleu, Olivenca, Itaituba, Apehu, Mimosa, Ubatuba, Alvaro de Carvalho, Feliciano Coelho, Brusque, Amazonas, Aguas Claras, Faceiro, Maranhao, Angelica, Joao Fernandes Vieira, Mathias de Albuquerque, Votuverava. C. Bleu, Campos Salles and Maranhao may be mentioned as being the most beautiful; the last two mentioned are transparent and resemble cut glassware. Some of his beautiful red varieties will be described later on. Since the publication of his last catalogue in 1902 he produced several hundred varieties which he claimed surpass his older productions in color and beauty. All the varieties just mentioned are in Henry Nehrling's collection, where the writer studied them in the fall of 1907.

Richard Hoffmann of Streatham, Eng., is at present the greatest hybridizer in Europe. His first productions were distributed by James Klissing & Son in 1899. Since then he has added quite a number to the treasures we already possessed. He obtained excellent results by crossing Lietze's best Brazilian kinds with Messrs. Bleu and Bause's productions. The following are varieties for which Mr. Hoffmann has received awards of merit at English and international exhibitions: Valse Bleu, Frau Director Sie-

TYPES OF CALADIUMS.

C. Chantini (Bicolor Type). C. Humboldti (Humboldti Type). C. Belleymei (Picturatum Type).

bert, Admiral Togo, Dorothy Peto, Sanglant, Thos. Tomlinson, Firefly and Blue Danube.

In recent years some beautiful varieties have been produced in this country. Adolph Jaenicke, head gardener to John Lewis Childs, has produced some beautiful varieties. Mr. Jaenicke was formerly with Haage & Schmidt, Erfurt, Germany. Caladium Ivory, the only pure white variety thus far put on the market, was grown by him. Others are: White Flag, a creamy white variety; Torchlight, Emerald, Fascination and Adolph Jaenicke. The well known orchid hybridizer, Theo. L. Mead, of Lake Charm, Fla., must also be mentioned as one who has done considerable in developing new varieties in this country. He centered his efforts on the growing of certain types and in this he was highly successful. A great many of his varieties belong to the C. Albanense type or group, which will be taken up in detail a little later.

During the last few years Henry Nehrling of Gotha, Fla., has had excellent success in producing a number of exquisite new varieties. These varieties will be placed on the market as soon as sufficient stock has been grown. About five years ago Mr. Nehrling began his experiments with 40 or 50 of the older varieties, and at the present time he has one of the largest collections in the world. An idea of how he grows them will be given under the heading of "Culture in Florida."

An unknown hybridizer has produced a number of varieties, which, although they are pretty, cannot be compared with any of Lietze's sorts. The best among these are: Lælia Duplessus, Le Reve, Ile de la Reunion, Reine de Suede, Mme. Marie de Flacourt and Prince Sansparset. Most of these are of a rather weak constitution. It has since been learned that the above were the best productions of Alfred Bleu and were offered to the trade in 1902. The newer varieties, or in other words the best and most beautiful, do not multiply as rapidly as the older sorts. Just recently John Peed & Son, West Norwood, Eng., placed a very pretty assortment on the market. Among these are: Wm. Roupell, H. J. Chapman, John Peed, Henry Dickson and W. E. Gladstone. It would be a great help to caladium fanciers if some one would undertake to publish a complete record of all the varieties raised by the older hybridizers, like van Houtte and Bleu.

Bronx Park, New York.

The flower gardens and, in fact, the whole of the great reservation at Bronx park, has been in its finest condition the past week, the frequent showers and intermittent sunshine having put new life into the shrubbery and flowering plants. The outdoor beds never looked better, the lawns are a deep rich green and the ample foliage on the trees is at its best. In the large conservatory visitors have been surprised to see a large palm pushing through the glass roof. It was planted under the dome of the great house, where it had ample head room at the time, but this it has outgrown.

Many improvements have been made in the development of the grounds. Four new greenhouses have recently been completed, forming part of what is known as Public Conservatory range No. 2, in the eastern part of the park. This has entailed considerable alterations to driveways, approaches and paths, and much of the work is already completed. These greenhouses were opened to the public last week; they contain collections of tropical ferns, moved from houses 10 and 11, tree-ferns and dwarfer ferns filling two of the houses, and the small ferns a third one. The collections are now much better displayed than in their former quarters, where they were crowded and massed together; their delicate and graceful foliage makes a beautiful display, and a large number of species, from all parts of the tropics, both of the new world and the old, have been brought together, now forming a most complete and extensive collection.

Many of the smaller plants exhibited have been raised in the propagating houses of the garden from spores taken from herbarium specimens obtained during collecting expeditions in the West Indies and Central America. A number of the tree-ferns were also obtained during these trips. Many plants have been presented and secured through exchanges, with other institutions; none has been purchased. Additional tree ferns are now being collected in the mountains of Jamaica. In order to show the biological relationship between ferns and cycads (sago-palms), the fourth house of this new range has been mainly given to the latter, moved partly from the great palm house and partly from the propa-

gating houses. The collection of cycads is not yet so representative as that of the ferns, but it contains many rare species, among them an elegant plant of the new Dioon purpusi, just described by Dr. J. N. Rose of the United States National Museum, obtained in southern Mexico several years ago. The plant trunk, obtained in September, 1906, remained dormant in the propagating houses until last winter, when it put forth a splendid circle of leaves.

ORCHID NOTES.

GROW Cattleya gigas, C. aurea, C. Dowiana and C. superba in the lightest and warmest position in the house, if there is any choice in the matter.

WATER Odontoglossum citrosmum very liberally now to swell up the old bulbs that were shrivelled while waiting for the flower spikes to show and assist the young growth.

CATTLEYA LOBATA must not be confused with C. labiata, or great disappointment is due when the plants flower, if ever they do. The former is an orchid of many names: Cattleya lobata, C. Boothiana, Lælia Boothiana, etc., and one of the most shy flowering in existence.

Cattleya Mossiae Mariana.

The fine variety of Cattleya Mossiæ depicted in the accompanying illustration appeared in the collection of Dr. R. Schiffmann, St. Paul, Minn., some years ago. The flowers were eight inches across, the sepals three and a half inches long, the lip four inches long and two inches broad. The outer segments of this variety are white, the lip white in ground, the throat purple overlaid with light radiating lines or veins. C. Mossiæ is probably the most variable of the labiata cattleyas and certainly one of the most useful, either for cutting or for a display on the plants. White varieties of it are not common, especially the true albinos with no purple on the lips, but only a stain of yellow. All the forms are easily grown and flower most profusely, many growths or leads producing two sets of flowers in one year.

Summer Treatment of Orchids.

Growers of a general collection of orchids have to make the most of the summer weather in order to get good growth into the plants, to properly consolidate them, or ripen as it is usually termed, in order that they flower freely the coming season. But the ripening process is only one part of the treatment. There must be a good growth in the plants and they must be properly developed first and this can only be obtained by keeping up a properly moist and airy atmosphere all through the season. Many orchid growers are afraid to ventilate their houses freely at any time of the year. They keep them close and hot and the plants suffer for want of air. It is much better to throw the house wide open at this season and dampen all dry places such as benches, floors and walls continuously. Especially is this the case with cattleyas, oncidiums, dendrobiums and other tropical species which, in order to flower freely, must have their growth properly consolidated by light and air after it is developed.

ORCHIDS OUTDOORS.

There are many of the Mexican lælias and other orchids that do not flower freely unless they get at least a few weeks in the open air in summer. Especially is this true of L. majalis, which some growers say will not flower without this treatment, and all the popular kinds, such as L. anceps, L. autumnalis and L. albida, are much better for this treatment. Odontoglossum grande always finishes up a much finer growth and flowers more freely after a few weeks in the open air in summer. But open air treatment does not mean sudden exposure to the hot sun of July and August. This would be very detrimental to the foliage and, through this, to the health of the plant. From a very early experience in our orchid growing career we learned this mistake in connection with a valuable collection of anguloas. These were fine plants in the very best of health, with magnificent foliage and bulbs. They were taken somewhat suddenly from the house in which they had been grown to the open air and set in the full sun. In consequence, every leaf was burnt and although the plants flowered freely they were so weakened by the loss of foliage that they made a much poorer growth for several years and the specimens were much injured in appearance.

The ideal place for orchids outdoors in summer is in the shade of a tree, but where plenty of air can reach them from all sides. Frequent spraying during hot weather is desirable and care must be taken to water the roots regularly. We never had such fine plants of oncidiums of the macranthum section as when the plants were treated this way.

It is rather early yet to speak of ripening of deciduous dendrobiums, but the time will soon be here when these will be greatly benefited by a few weeks in the open air. In fact, if properly looked after by shading and spraying regularly there is no reason why such species as D. nobile and D. Wardianum may not be grown outside from the end of June to the middle of August or even later provided the weather keeps mild. But in any case all the deciduous kinds such as D. Wardianum and D. crassinode should be placed outside after the last leaf has appeared, this treatment ripening them and preparing them for their winter's rest. Other orchids such as Cœlogyne cristata, many of the miltonias and in short most of the pseudobulbous section are benefited by this treatment.

COOL ORCHIDS.

Cool orchids are not as much grown as they could be and Odontoglossums masdevallias and others may be kept growing and healthy by heavy shading and atmospheric moisture during the hot months. A constant moist atmosphere, shade at all times and ample supplies of air are what they need. If the house, on entering from the external air seems pleasantly cool all will be well, and this is much easier to manage than some growers would have us believe. It is no use to expect to keep the temperature down to any set figure. For instance, when the outside temperature is in the nineties in the shade, we cannot expect to keep a house of orchids at 60°. The point is to so manipulate the atmosphere, that there is never a harsh dry feeling in the air, and keep the sun from damaging the tender foliage. Overwatering at the root in summer is also a great injury to these plants; they are not growing very rapidly, their growing season coming later, and the sooner growers awake to this fact the better it will be for the plants under their control. No repotting or other interference with the roots should be done at this time of the year. Late August and September, when the plants begin to make new roots, is the proper time for this operation.

CATTLEYA MOSSIÆ MARIANA.

CATTLEYAS.

Referring again to the cattleyas, C. gigas and C. Gaskelliana will be the principal varieties of the labiata section now in flower. These flower upon the new growth and the former usually commences to grow again at once. This makes the present a good time for repotting and after repotting, the plants should be well looked after so that the new growth made will have ample time to develop again before winter. Very

often this growth will flower, but whether it does or not the treatment is the same. C. Mossiæ should be encouraged in every way to finish up a good growth before autumn. C. Trianæ, C. Mendelii and in fact the majority of this section are in full growth and must be encouraged in every way. Referring to overhead watering, a good wash with a syringe or hose is of great benefit to all these cattleyas, but this must not be done in damp or dull weather. C. labiata is rapidly approaching the flowering season and the double sheaths can be seen in the young growths. When spraying see that the water is kept away from these plants, but keep plenty of moisture about them in the atmosphere. C. aurea and C. superba need far more heat than any other cattleyas in cultivation and the warmest and lightest part of the house should be chosen for them.

COMMERCIAL.

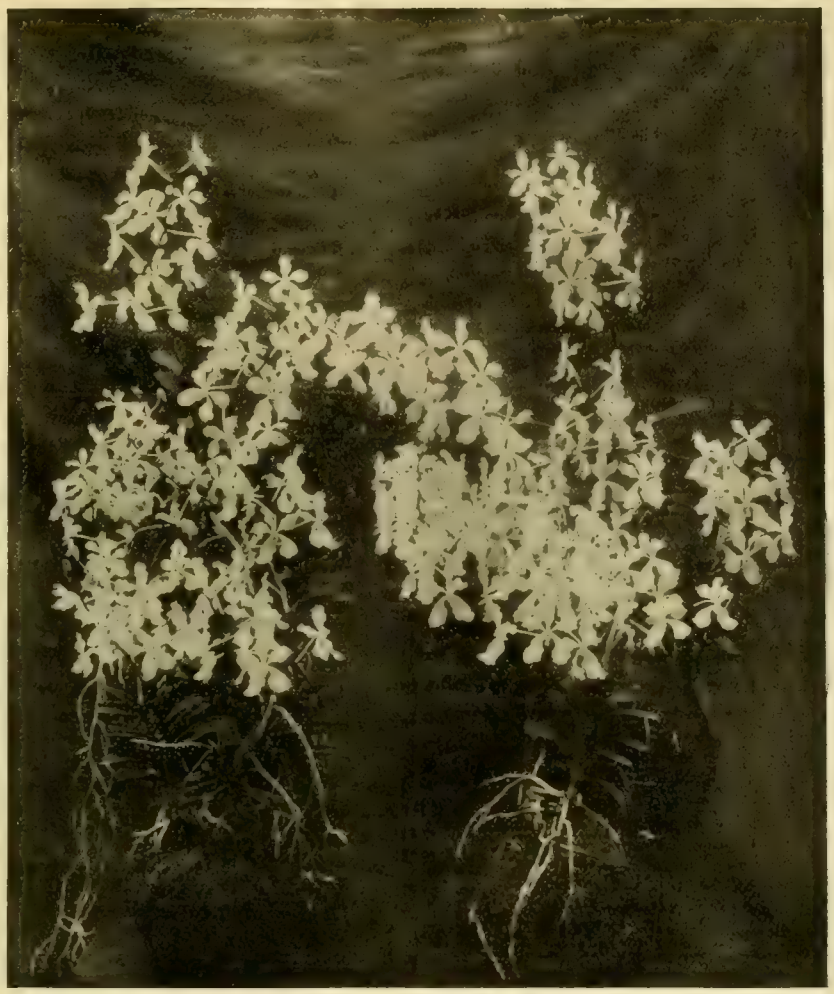
Vanda Coerulea.

Blue is a rare color in orchids and Vanda cœrulea is one of the best instances of this color. It is a fine species for cutting and one of the most popular of all for this purpose. There is considerable difference in the color of the varieties; some of them are very pale, almost white, while others are the true cerulean blue. Unfortunately the finest varieties are often those of the weakest growth while the poorer varieties will grow like weeds. V. cœrulea is an inhabitant of India, where it grows well up on the mountains and consequently in a low temperature. This suggests the kind of treatment required by it under cultivation. The house that reeks with moisture and is kept close at all times is the worst possible place for these air loving kinds. What they need is plenty of air around them at all times with shade only from the hottest sun and ample moisture in the atmosphere.

Unlike most vandas, that seem to delight in getting away from the center with their roots, Vanda cœrulea seems to delight in growing with its roots overrunning each other in a close mass and consequently very small baskets or pots are needed to grow it in. Nothing but clean sphagnum moss and charcoal or potsherds is needed for compost. The use of these small receptacles makes very liberal watering necessary at all times, but especially during summer, when the plants are growing freely. Like others of the single stemmed section this vanda has no positive period of rest and must not be dried off. While the growth is quiet, much less moisture is needed than in summer, when it is growing freely, but to withdraw the moisture altogether is wrong at any stage. COMMERCIAL.

MOUNT CLEMENS, MICH.—James Taylor, wholesale grower of carnations and violets for the Detroit market, opened a retail store in the Bath City July 1 and will hereafter dispose of most of his stock at retail.

BABYLON, N. Y.—The Howell Carnation Co. has been incorporated with the secretary of state, to deal in flower, etc., with a capital of $10,000. The directors are Frank A. Howell, Jamaica; Alex. D. Donnelly and Mary A. Verney of Brooklyn.



VANDA CŒRULEA.

WITH THE GROWERS

Lowe & Shawyer, Uxbridge, Eng.

A FAMOUS ENGLISH NURSERY.

In the western part of Middlesex, England, near the old town of Uxbridge, is a famous market nursery that is well worth a visit from any American growers who happen to be in England this season. [All greenhouse establishments are "nurseries" in England.—ED.] For many years the nursery has been in the hands of Joseph Lowe but it is now known under the title of Lowe & Shawyer, two big businesses having been united. The nursery near Uxbridge is about 70 acres in extent, but other portions in the neighborhood also run into several acres. One of the chief specialties is the culture of roses for market. Although thousands upon thousands of plants are raised every year, they are not for sale. The business consists of the production of the finest blossoms for Covent Garden and elsewhere early in the season when prices are ruling high.

An enormous amount of glass of course is necessary and the varieties grown are those best suited for market work, such as Chatenay, Catherine Mermet, Mrs. John Laing, Ulrich Brunner, Liberty, Frau Karl Druschki, Caroline Testout, Killarney and a few others, including the now famous Joseph Lowe, of which there are some thousands of plants grown. This variety originated in the nursery and is named after the senior partner. It has proved itself to be such a good market variety that it is being grown more and more each year and will probably displace some of the other varieties in time. At one time the rose plants were planted out in deep beds of good rich loam and were left for a few years before they were rooted up and replaced with younger stock. This system of planting has now been discarded and shallow beds 12 to 15 inches deep are made instead in the form of a bench raised from the ground a few inches. In this way sufficient soil is obtained for the roots and the labor of moving out old soil and replacing with fresh has been considerably lightened in consequence.

Apart from the greenhouses proper, there are hip-roofed skeleton structures which were at one time patented by Mr. Lowe. These resemble just the division rafters, uprights, etc., of an ordinary greenhouse. They are, however, so arranged that lights fit into the divisions on top and at the sides and a crop which has been growing in the open air for instance, during the whole of the summer, can be easily protected from the winter frosts simply by putting on the lights. This has been found an economical way of bringing a crop to perfection and some

hundreds of thousands of chrysanthemums are treated in this way as well as roses. Along the sides of these skeleton wooden structures run hot water pipes and temporary boilers are fitted to these in winter if necessary for any particular crop. The ends and sides of these structures are not glazed. They are simply covered with coarse canvas nailed on and kept in place by battens and it is astonishing how little warmth escapes from the houses thus fixed up. Besides roses and florists' chrysanthemums, other leading crops are early varieties of Chrysanthemum maximum, a magnificent strain of tall growing Iceland poppies, liliums, tulips, daffodils, etc., each in their proper season. Something like 500 hands are employed and every department of this large establishment bears obvious traces of the wonderful organizing abilities of its owners. Being entirely market growers it is rarely one learns of the firm of Lowe & Shawyer in the papers. There are few nurseries I know so interesting in many ways and so admirable in cultural methods.

W.

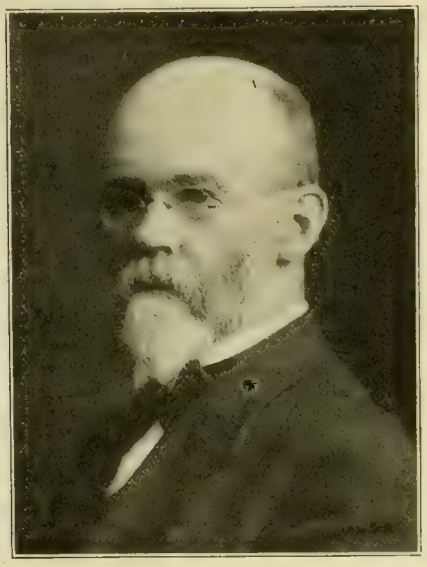
The Joseph Heacock Co., Wyncote, Pa.

Twenty-five years ago Joseph Heacock was a market gardener. Hotbed sash were a part of his equipment. These grew into greenhouses when bedding plants were added to vegetables as a part of the stock in trade. In course of the evolution the garden truck was lost to sight. Bedding plants became the factor and these in turn, with the erection of improved houses, gave way to cut flowers. The business grew, ranges of glass were added, each new addition being larger than the last until finally all the available ground was covered. Still the cry was for more greenhouse space. Partitions were removed, houses that had been built separately were joined together, until with the work just finished the whole establishment is virtually under one immense roof covering some 80,000 feet of ground surface.

Roses have long been a specialty, the aim being to grow the best and that this high ideal was realized is seen in the great number of prizes won in competition with the best growers of the country. American Beauty was for years a specialty, but gave way at last to Killarney, which Mr. Heacock says has paid him better than any other rose he ever grew. Carnations have always been grown, but never in large quantities until the past season, when Dorothy Gordon, a seedling (Lawson X Enchantress), was grown in quantity and which had the choice over all others of its color, rose pink, in this market during the past season. It is unquestionably the best pink carnation now in cultivation, being a larger flower with better stem, and more prolific than Enchantress, which is certainly a record hard to beat. It is to be sent out in the spring of 1910.

From garden truck to orchids there is a great span, but Mr. Heacock has made it and cattleyas are to be seen there in quantity; they were first given a trial two years ago and now the stock has grown to some 5,000 pots; these, together with a large house of cypripediums, will make the company a factor in the market for this class of flowers. The stock of established and recently imported plants is in fine condition, new growths being seen on all the clumps.

Palms have long been a specialty with Mr. Heacock, whose fine kentias are known the country over. The demand for room for this rapidly increasing branch of the business, which is likely soon to crowd out the roses and carnations, will necessitate the erection of an entirely new establishment to be devoted exclusively to cut flowers. Before another season this is likely to be well under way, as a number of locations have been looked into. The palms are, in fact, now the feature of the establishment; they are



Joseph Heacock, Wyncote, Pa.

all grown on the place from the seed up, nothing imported. Kentias Forsteriana and Belmoreana are seen in all sizes from 2-inch pots for fern dishes up to the large made-up stock in tubs worth $15 and $20 each. Cedar tubs of 7, 9 and 12 inches have largely taken the place of pots, being much more satisfactory. A block of well-grown arecas are also seen as well as cocos in quantity. Two benches 12 inches wide and 275 feet long each were arranged next the eaves of the large palm house; these contained seedling cocos in 2-inch pots. This space had never been utilized before, but has been found ideal, as it is out of the way and being over the steam pipes the seeds germinate quickly.

Throughout the ranges the palms are in the best condition, showing that dark green lustre that indicates perfect health. A small block of cibotiums are mounted on pedestals in the center of one of the houses. Mr. Heacock says this he finds to be much in demand and that next season the large sizes will be found wanting, as there is great scarcity of stock for growing on. One of the features of this establishment is that the visitor very rarely sees an empty bench space; no matter how fast the stock goes out those that are left are constantly pushing to the front. In one of the houses a stock of 75,000 young kentias in flats were waiting a chance to get into pots, while on a back bench 60,000 or more seeds had been sown to come along for next season. Tables are rapidly giving way to ground beds, on which the plants do better, the pots or tubs rest in coarse cinders. All borders of beds and walks are of cement. Taken all in all this is one of the model places of the country.

ROBERT KIFT.

THE RETAIL TRADE

Cross of Richmond Roses.

SEE SUPPLEMENT WITH THIS ISSUE.

Richmond roses used in any set form of design have a very fine effect and, although the solid form of cross does not appeal to the artistic sense of some patrons, yet there are many who will have it. Quite frequently, we are convinced, retailers do not get the price they ought to for this class of design. It is true that roses with short stems may be used and probably many of a second or even third grade may be worked off in this kind of design, but a great number have to be used in a cross, say six feet high, with arms in proportion and sometimes if retailers figured out what the roses cost, the time taken in wiring and making up together with the cost of the design frame, they would be surprised at the small amount of profit left even when they obtained a seemingly good price.

However, this is a matter for individual consideration. The closer and more solid the cross is made, the harder the lines, in short, the more need is their for a good, bold and well-executed base. Cycas leaves and fronds of Nephrolepis Whitmani stand out well and serve to show to the best advantage some finer and longer stemmed roses than are used in the body of the design. Other flowers are not always permissable, but when the customer does not stipulate otherwise a few lilies have a fine effect. Easter lilies, of course, always look well, but Lilium roseum and L. rubrum are also excellent in a case of this kind. Gladioli ,when they are in season with some of their own foilage and a few leucothoe sprays, are also good, in short, anything of a bold and striking character that will make a good contrast and stand out well from the stiff cross may be used.

Summer Flowers in the New York Stores.

There is no denying the fact that the summer dullness is here and that accelerated by the intense heat of June it arrived early and brought almost disastrous results to the cut flower trade. At a time when the great lines of transportation are taxed to their utmost capacity to carry that fortunate portion of the population that has the leisure and price to seek cooler climes, it can be readily understood that flowers are not in great demand. While the voyagers on the great Atlantic highway carried away many floral offerings from loving friends, which made some business, it is sadly recalled that many of these departures mark the loss, for several months, of good customers.

At this writing, July 3, there are prospects that for the next two days there will be a temporary exodus that will be literally a great outpouring of the masses. Unfortunately, at least

for the florists, though many suggestions have in the past been made as to a fitting and appropriate celebration of the "Glorious Fourth," none of them, so far as we are aware, have been applied along the lines of horticulture and floriculture. The nearest that we can get to it is that the dinners do to some extent help out our friends and coworkers of the strawberry and melon patches. The majority in the trade, with becoming philosophy, has settled down to accept the situation and make the best of it, which is better than worrying.

Though the foregoing is rather a dark picture, it does not follow that business is altogether at a standstill. There is a vast multitude, who, from business or other reasons, must remain in the city and possibly a few remain from inclination. To these people, for the next three months, the florists must look for enough business to tide them over the lean time. Even in very dull times, like the present, there are calls for fine stock, and it is satisfactory to note that there are but few of such orders that are not promptly filled. During the past week there have been a number of large funeral orders, filled largely with orchids, lilies and lily of the valley, a plentiful supply of all these stocks enabling the designers to turn out elaborate work on short notice.

The hot wave was very severe on roses and carnations. American Beauty, Killarney and Kaiserin Augusta Victoria are about the only roses now coming to market in quantities that are to be depended upon. There are a few fairly good Richmonds, enough to supply all demands for red roses. It may here be stated, however, that flowers that were formerly not considered suitable for funeral work are now freely used by leading designers. This includes both Richmond and American Beauty roses. The supply of American Beauties has been falling off considerably within the past week and the price for specials has advanced a few points. American Beauty is a good rose for every day in the year if it can be had, and, thanks to the enterprise of the growers, there are always some in this market. As already stated, the hot weather has put out many of the carnations and as a marketable crop we will soon see their finish for a time. Genevieve Lord is one pink that, though old, seems to stand the vicissitudes of weather better than some of the new and more noted varieties. A few asters have arrived and the indications are that the crop will be good, which will be welcome news to many of the retailers, as the aster fills a gap and no equal substitute has been found.

Sweet peas are very plentiful and not being expensive at the present they are certainly a boon to that large portion of the public that has highly developed taste for the beautiful but a slender pocketbook. It would be hard to get along without the sweet peas. Water lilies are now seen in considerable quantities and, if not great sellers, they are made very useful and attractive by some of the retailers, in improvised ponds in their show windows. In the window of a leading Broadway store, a lily pond, bordered with foliage plants, has been a great attraction for the past two weeks. A number of incubator goslings have been secured and are placed in the pond during the daytime, which adds realism to the scene.

There are a number of stocks on the market that, while not to be classed as "leading," find a place and sale. Lilium rubrum and L. auratum are now coming in and both are excellent for show window purposes or may also be used for funeral work and other purposes. There is a great amount of feverfew and it works in well in cheap bunches. The gardenia crop of this vicinity is about gone for the summer but a leading Pennsylvania grower is shipping in very good blooms and there is some demand for them. There is always, it may be stated, a limited demand for everything in this market, but the trouble is that we too frequently get a great surplus of some particular stock.

Many boxes of cut Crimson Rambler and Dorothy Perkins roses have recently been coming in but it cannot be said that they are much of an acquisition to the stock of the retailer. Many fine bunches of delphinium have recently been seen in show windows and for this purpose, if for no other, they work in very well, adding a pleasing contrast and variety. Were it not for the roof gardens and palm rooms of the big hotels and cafes, the plant trade would be practically dead. Your thrifty housewife is not buying plants to have them burned up when she goes for a day's outing. The window-box and veranda work is generally finished and so is bedding, so with the exceptions noted and possibly a few table ferns, we will hear little of trade in plants for the remainder of the summer.

MARION, IND.—Alfred Hacker will build a new greenhouse here shortly.

CUBS—*vs.*—HUGHES
Baseball

As each day goes by, it becomes more apparent that if any team is to beat those Cubs out of another World's Championship, it must be a team of Chicago boys. The Giants are down and out, and the Pirates can't steal and plunder from the Cubs any better than they could before Kling deserted us. So what's the use of expecting a contest unless it is between ourselves?

Just to show those ever-winning Cubs that they have got to fight this year, if they are going to be the Champs again, I have organized a "Hughes" team that is going to play a series with the Cubs for the real championship of the world. I have a team that will give them a run. My shortstop, Billy McGovern, you have never heard about, but it is said he has gone clear over behind second base and nailed a line drive right off Hans Wagner's bat and spiked speedy little Willie Keeler, trying to score from third, at the home plate, and my catcher works like Mike Kelly in his prime. You should see him nail Frank Chance trying to steal second.

Now, the series will be played in the window of my Flower Emporium, at 690 W. Van Buren St., and can be watched at close range any day or night that you happen to pass by. Of course, it is just a reproduction, but you will be surprised how lifelike and natural everything appears. There is the diamond, exactly reproduced from the west side park. Handsome Johnny Evers is making a run for home. You can see that steely glint in his eyes which shines there just before a great play. The ball is in the air, and great Schulte is at the plate, ready to drive in a run with his Big Betsy bat. Sheckard is sliding to second —not even Longboat could ever catch that speedy boy.

Every player is in his position, prepared to stop the scoring of the terrible Cubs; the cheering crowds in the grand-stand are shouting encouragement to both sides. You can look down over the field and pick out your favorite player. It is an inspiring spectacle to every fan, reproducing with such naturalness a great moment in a great game. Which side will win? I don't know. But I am a true baseball fan and if the Cubs beat "Hughes" team, it will be because they are the best team. If my team wins, "Hughes" will be World's Champion in baseball, just as he is Chicago's Champion Flower Man now.

If you are a real lover of the National Game, come and see this game. Bring your best girl along. She will enjoy it just as much as she does the other pretty things that can be seen in my windows at 690 West Van Buren Street, corner of Lincoln Street.

MORE OF THE HUGHES BRAND OF ADVERTISING.

Hughes' Baseball Advertising.

We reproduce on this page the front and reverse of a card sent out by H. R. Hughes, West Van Buren street, Chicago, as an advertisement. The baseball scorecard is used at the games played by his team and the whole forms one of his advertising stunts for which the people on the west side are always on the lookout. This strikes us as one of the most original things of the long series Mr. Hughes has sent out and about 50,000 have been distributed.

Handling Flowers While in Use.

ED. AMERICAN FLORIST:—

Is it better to put roses and carnations in and out of icebox every 15 minutes or leave them out while using them during summer weather?

AN OLD SUBSCRIBER.

Leave them in the icebox as long as possible and return them at once as they are done with.

Temperature for Cut Roses and Carnations.

ED. AMERICAN FLORIST:—

What is the proper temperature to keep cut roses and carnations?

AN OLD SUBSCRIBER.

If the icebox can be kept at 45° or even a few degrees lower they will be all right. But not every icebox can be kept as low.

Keeping Roses and Sweet Peas in Icebox.

ED. AMERICAN FLORIST:—

Do roses or sweet peas keep better in pans out of water in icebox than in vases in icebox?

AN OLD SUBSCRIBER.

All flowers keep best in water.

Peonies at Sarcoxie, Mo.

The illustration herewith shows a fine block of two-year-old plants of that popular peony, Queen Victoria, growing in the field of Gilbert H. Wild, Sarcoxie, Mo. The photograph from which the cut was prepared was not as clear as we would have liked, but it is quite apparent that the plants are good and have made great progress, considering their age. Mr. Wild has had a long experience with peonies, having been in the business for many years. He has 15 acres devoted entirely to their culture.

PEONIES AT GILBERT H. WILD'S, SARCOXIE, MO.

Two Year-old Queen Victoria.

Root Crops.

A paper read by C. A. Zavitz of the Ontario Agricultural College, Guelph, at the convention of the American Seed Trade Association, Niagara Falls, Ont., June 23.

The growing of roots as a feed for farm stock has received much attention in many of the European countries. The root crop, however, has never been developed to the same extent in America, owing, no doubt, to the large areas devoted to corn in certain sections, and to the adaptability of the soil to grain crops throughout a considerable part of both the United States and Canada. In the northeastern states and in Ontario, Quebec and the maritime provinces, however, the field roots occupy an important place in agricultural production. In some sections of the country, the area devoted to the root crop is increasing from year to year. In order to illustrate this point, I would draw your attention to the increase in the area devoted to the mangel crop in the province of Ontario. This increase can be observed from a study of the number of acres used for mangels in each of a number of the past years, as follows: 1882, 15,791; 1887, 17,924; 1892, 22,026; 1897, 41,175; 1901, 61,095; 1908, 67,937. During the same period of 26 years, the area devoted to turnips increased from 78,823 in 1882 to 120,920 acres in 1908. Within the last few years, however, the area used for turnips has been decreasing, and that for mangels increasing to a considerable extent, owing, no doubt, to the greater development of the dairy industry, in connection with which the mangels prove more serviceable than the turnips.

Root crops may properly include a large number of vegetables, as well as those crops which are usually grown for farm purposes. This article will be confined entirely to that class usually known as field roots, and more particularly to the mangels, sugar beets and Swede turnips. I take it for granted that the members of the American Seed Trade Association are already in possession of a large amount of general information, and in many cases of detailed information regarding the production of field roots as a farm crop, as it relates to the seed trade. I will, therefore, confine my remarks almost entirely to certain experiments and investigations which we have conducted at the agricultural college at Guelph.

CANADIAN GROWN ROOT SEED.

Nearly all the seed of field roots which is used in Ontario is grown in Europe. From certain preliminary experiments and observations which we made previous to the year 1905, we obtained the impression that root seed produced in this country was likely to give very satisfactory crops. During the last three years, we have carried on systematic work in the production of seed of mangels, Swede turnips and carrots, and have been testing the seed so produced with seed of similar varieties which has been imported. In the autumn of each of the past four years, roots were selected and stored during the winter and were replanted in the spring. Some of each class of roots were pitted in the fall, some were stored in piles in the root cellar, and some were placed in sand. We have, however, found it difficult to pit a small quantity of roots and have the roots under the same conditions as those which have been pitted in large quantities. In the other methods of storing, we found we could obtain practically as good results when the roots were stored in loose piles in a cool cellar as when they were packed in sand, but there was less mould and sprout in the early spring from the latter than from the former method.

Professer C. A. Zavitz.

Of the Ontario Agricultural College, Guelph.

During the past few years, we have obtained some very good results indeed from home grown root seed. On the whole, the home grown seed proved to be a little higher in germination and seemed more productive of roots than the seed which was imported. The Ontario grown mangel seed surpassed the imported seed in yield of roots per acre by 8.3 per cent. in 1907, and by 12.4 per cent. in 1908. In the autumn of 1907 the mangel seed did not ripen as evenly as in the year previous, some of the plants producing but little ripened seed. In the fall of 1908, however, all kinds of root seed matured very well, and the germination of the home grown mangel seed, in particular, is decidedly better than that of any of 30 varieties of imported seed which were sown this spring. We are at the present time extending our experiments in the growing of root seeds considerably, and hope to secure additional knowledge along this line of work from year to year.

SELECTION OF SEED.

Within the past few years, a large amount of experimental work has been done to determine the influence of different selections of seed upon the resulting crop. From the numerous experiments which have been conducted at our college on seed selection, only those bearing directly on the size of the seeds of field roots which were sown, are here presented. Four tests were made annually with the different selections of seed of the field roots. Duplicate experiments were conducted, in which the seeds of the different selections were planted separately, and duplicate experiments were also conducted by planting three large, five medium and eight small seeds at each place where it was desirable for a root to grow. The plants were afterwards thinned, leaving one plant in place and having the plants of the different selection of each class at an equal distance apart. When the roots were harvested, the yields of the duplicate tests of each method were averaged. The following table gives the average results of the duplicate tests made by means of each of two methods of comparison, in order to ascertain the amount of the influence of the size of root seeds on the size of the roots produced.

	Roots	Number of years of tests	Yield of Crop per Acre: Large seed (tons)	Medium seed (tons)	Small seed (tons)
Plots in which equal numbers of seeds were planted separately.	Mangels	5	31.19	27.02	18.57
	Sugar beets	5	23.25	21.32	13.48
	Swede turnips	5	15.35	12.63	7.03
	Fall turnips	4	25.27	20.78	12.90
	Field carrots	5	22.32	19.31	13.59
Plots in which equal numbers of plants were left when thinning.	Mangels	5	35.17	32.23	24.47
	Sugar beets	5	22.54	22.37	15.05
	Swede turnips	5	18.77	17.85	10.40
	Fall turnips	3	22.98	22.23	22.48
	Field carrots	5	26.62	25.13	18.87

Note.—In the case of mangels and sugar beets the seed clusters instead of the separate seeds were used.

In the foregoing table, there are no less than 94 distinct experiments conducted with large, medium sized, and small sized seeds of five distinct classes of roots. In fully 85 per cent. of the separate tests the larger seeds yielded more heavily than the smaller seeds.

For several years in succession, we planted root seeds to the depth of one-half inch, one inch, one and one-half inches, two inches, three inches and four inches, in order to ascertain the depth at which we might expect to obtain the best results throughout a series of years. The experiments were conducted on comparatively low land, and also on land of considerable elevation. The soil was what might be termed an average clay loam, and in no instance was it very light or very heavy. Level cultivation was used throughout. In each instance the experiment was conducted in duplicate for each of five years with mangels and sugar beets, and for each of four years with Swede turnips and carrots. The average results show that with each class of roots the best yields were obtained from sowing the seed at a depth of one-half inch below the surface. The following are the average results of the 10 tests made in the five years with mangels, and represent the yield of roots per acre from each depth of planting: one-half inch, 23.6 tons; one inch, 19.8 tons; one and one-half inches, 19.3 tons; two inches, 17.9 tons; three inches, 13.8 tons; and four inches, 6.3 tons.

In each of five years, an experiment was conducted in duplicate by thinning mangels, fall turnips and Swede turnips 4, 8, 12, 16 and 20 inches apart in the rows; and carrots 2, 4, 6, 8 and 10 inches apart in the rows. The rows were 3 1-3 links or 26 2-5 inches apart in all cases. The average results of the experiments show that in almost every instance as the distances between the roots in the rows were increased, there was an increase in the average size of the roots, but a decrease in the dry matter in the roots and also in the yield of roots per acre.

An experiment was conducted in duplicate in each of five years by sowing sugar beet seed in rows which were made at different distances apart. Seven rows were sown in each plot. The outside rows were discarded and only the five inner rows were taken into consideration when determining the yield of the plots. The roots were thinned to a distance of seven inches apart in the rows. The Kleinwanzlebener variety of sugar beet was used throughout. Not only were the yields per acre determined, but the roots were also analyzed in the chemical laboratory at the college, and the quantity and the quality of sugar was thus ascertained. The following table gives the average of the five years' results of the percentage of sugar, the purity of juice, the average weight per root, and the yield of roots per acre for each of the different distances allowed between the rows.

Inches between rows	Percentage of sugar	Purity of juice	Average weight per root (lbs.)	Yield of roots per acre (tons)
12	17.1	85.7	.62	20.5
14	17.2	87.2	.65	20.2
16	16.8	86.4	.73	19.3
18	16.9	87.8	.80	18.9
20	17.0	86.3	.87	18.7
22	16.4	85.2	.94	18.4
24	16.9	87.3	.99	18.1
26	16.9	88.8	1.04	17.7
28	16.8	86.8	1.11	17.0

In Germany, where the sugar beet is used very extensively for factory purposes, the rows are made rather close together, being only 18 to 20 inches apart in many instances. By having the rows fairly close together and the plants quite near to each other in the rows, it is claimed that the largest percentage of sugar is obtained from the beets. Our results tend to show that in this country, however, the composition of the roots, grown in rows at different distances apart, show but slight variations either in the percentage of sugar or in the purity of the juice

THINNING AT DIFFERENT STAGES.

In thinning sugar beets at four different stages of growth in each of five years, it was found that the greatest average yield per acre was obtained when thinning the plants when about 2 inches in height. There was an average increase of 1.3 tons per acre when the roots were thinned at a height of 2 inches as compared with those which were thinned at a height of 8 inches.

Numerous other experiments with field roots have been conducted at the college, but as the results are of interest more particularly to those who are engaged in practical agriculture than to those connected with the seed trade, their presentation is omitted from this paper. From the results of the experiments here presented regarding the source of the growth of the seed, the selection of the seed itself, and the influence on the resulting crop from sowing at different depths, from thinning to different distances apart and at different stages of growth should, I think, form a good basis for a profitable discussion and for further investigation.

THE AMERICAN FLORIST desires the names of members who have been very regular in attendance at the recent annual conventions. It desires to compile a list of those who have attended the most meetings, and will be glad to receive records from its subscribers who have been constant in their attendance at the S. A. F. conventions.

Plant to Name.

ED. AMERICAN FLORIST:

Enclosed you will find leaf of a plant. Please let us know, through the columns of the AMERICAN FLORIST, the correct botanical name. L. C.

The specimen sent was much too small, besides being withered, to determine what it was.

THE senate voted, June 18, to raise the duty on print paper above that paid by the house bill.

A MEETING of the Illinois florists' advisory committee is called for Tuesday, July, 13, at Champaign.

EDWARD VALENTINE HALLOCK is remembered, with portrait, by a memorial page in the New York Florists' Club souvenir outing book.

AND it's going to be a warm reception at the S. A. F. convention. Still if those Cincinnati people put their money for decorations into electric fans there seems to be no reason for anyone becoming unduly heated about it.

THE preliminary premium list of the St. Louis Horticultural Society's third fall exhibition is out and may be obtained of Otto G. Koenig, 6473 Florissant avenue, St. Louis. The show will be held in November, but the date has not yet been fixed.

THE premium list of the plants, flowers and fruit section of the seventy-eighth fair of the American Institute, New York, to be held at the Berkeley lyceum, September 21-23 is out and contains a long and varied selection of prizes in all these classes of produce. Correspondence should be addressed, W. A. Eagleson, Secretary Board of Managers, American Institute, 19-21 West Forty-fourth street, New York.

Society of American Florists.

TRANSPORTATION TO THE CONVENTION.

It seems to be settled that no special rates will be granted for the convention, the traffic associations pointing out that the regular rates now quite generally charged, namely, two cents per mile or four cents for the round trip, are precisely the same as the special rate of a fare and a third which the society used to have under the old three cents a mile system, and they claim that nothing beyond this can be allowed. The fact is pointed out, however, that tourist rates are in effect from a great many points in the country to all the larger cities, and that by a little inquiry most of the members of the society can obtain a very low rate to some large city like St. Louis, Chicago or Buffalo, and from there join the local club and get advantage of any special arrangements which they are able to make.

This being the twenty-fifth annual meeting of the society and Cincinnati being such a central point, such great exertions being made by the Cincinnati people to make the reception and entertainment something out of the ordinary, all seem to insure a large attendance at the convention. Reports from all points indicate great interest in the convention and that an unusually large number have signified their intention of attending.

Superintendent Murphy reports an extraordinary demand for space, both in the number of applicants and in the large spaces required, which seems to insure a phenomenally good exhibition. The hall set aside for the trade exhibition is perhaps the best which the society has ever had and the meeting hall, both in size, comfort and convenience and also in its easy access to the trade exhibition, seems to be nearly ideal. In the meeting hall is a magnificent pipe organ, and Vice-President Gillett has secured the services of one of the leading organists in Cincinnati for organ recitals previous to the opening of each session.

The preliminary programme for the convention will be issued shortly and mailed to all members. Copies will be cheerfully sent to all others on application.

DELEGATE TO SWEET PEA SOCIETY.

Pursuant to a request of Secretary Bunyard of the National Sweet Pea Society, President Valentine appointed F. H. Traendly to represent the S. A. F. at the meeting of this society, July 7-8.

July 2, 1909. W. N. RUDD.

Louisiana Red Cypress.

ED. AMERICAN FLORIST:—

It has been called to the writer's attention that there is being offered for sale pecky cypress which comes from the middle states, and which has not the lasting qualities of the Louisiana red or gulf pecky cypress. As to the lasting qualities of the Louisiana red or gulf cypress there is no question. Such concerns as Bassett & Washburn, Hinsdale, Ill.; Poehlmann Bros., Morton Grove, Ill.; Emil Buettner, Park Ridge, Ill.; Peter Reinberg, Chicago; J. F. Wilcox, Council Bluffs, Ia.; A. Graham & Sons, Cleveland, O.; J. Breitmeyer's Sons, Mt. Clemens, Mich.; Wm. L. Rock Floral Co., Kansas City, Mo.; Griswold Greenhouse Co., Ashtabula, O.; Geo. F. Hartung, Sandusky, O., and hundreds of others too numerous to mention, have used Louisiana cypress for years and can attest to its lasting qualities. Some of the above named have used it for 10 years or more. Others possibly for less time.

George F. Hartung, Sandusky, O., made a statement at the gardeners' convention in Cleveland last year, that after having been in use in his benches five years, he turned over Louisiana red pecky cypress which we had shipped him, and found that it had not started to rot anywhere, even at the cross supports.

Within the past week florists have advised us that when they departed from using Louisiana red pecky and bought that which was offered by others at a little less money, in some cases even not at a less price, they got a very inferior article which did not last, and it would be a great injustice to any florist to invest his money in lumber for benches, to find that instead of lasting 10 or 15 years, it would only last two or three. Experience has taught that Louisiana red pecky is the stock that lasts. Can you beat it? If so, we want to know what is better, as the best is none too good to offer to our friends. We believe that florists in buying pecky cypress, should insist on getting a guarantee that it is the genuine or refuse to buy it. There is nothing cheaper on the market today, considering the lasting quality of the wood, than Louisiana red pecky cypress, so why use a cheap substitute that will not last half as long? No matter who you buy it from, insist on having Louisiana red gulf stock. There are plenty of people to buy it from, and gulf red stock is practically free of sap. Sap will rot out in a very few years, while heart red lasts many years.

THE FOLEY MANUFACTURING CO.

National Sweet Pea Society.

FIRST EXHIBITION (by wire).

The National Sweet Pea Society is now an accomplished fact, having been organized, officers elected and the first exhibition held July 7-8. The exhibition was held in the museum of natural history, Seventy-seventh street and Columbus avenue, New York, John Craig acting as temporary chairman and delivering an address. The following are the officers elected:

Harry Turner, president.
H. W. Waite, vice president.
Harry Bunyard, secretary.
Wm. Duckham, treasurer.

The exhibits by the leading growers were of excellent quality and the first show will go on record as a great success. We give below the first prize winners in each class:

The Arthur T. Boddington cup; for the largest collection of sweet peas, number of varieties to count.—Howard Gould.

The W. Atlee Burpee cup; for the largest collection of sweet peas, the number of varieties to count.—Wm. Duckham.

The Peter Henderson & Co. cup, or its value; for the best 25 vases of sweet peas, distinct varieties.—W. W. Rawson & Co., Boston, Mass.

The W. W. Rawson silver medal; for the best 12 vases of sweet peas, distinct varieties.—Chas. R. Hedden, Madison, N. J.

The Stumpp & Walter prize, $10 in gold; for the best six vases of sweet peas, distinct varieties.—Seth Low.

The Henry A. Dreer prize, $10 in gold; for the best 10 vases of sweet peas, Spencer or Unwin flowered, in 10 varieties.—Seth Low.

The Morris County Gardeners' and Florists' Society's prize; for the best six vases sweet peas, six varieties, 20 stems to a vase.—Wm. Duckham.

The C. C. Morse & Co.'s cup; for the largest collection of sweet peas, number of varieties to count. Open to the trade only.—A. T. Boddington.

The J. M. Thorburn & Co.'s prize; for the best 15 vases sweet peas, 15 varieties.—Seth Low.

The W. Atlee Burpee prize; for the best vase of waved or Spencer type sweet peas introduced in 1909.—W. W. Rawson & Co.

The Watkins & Simpson prize (London, Eng.); for the best three vases of sweet peas disseminated in 1909.—Wm. Duckham.

The Henry F. Michell prize; for the largest and best vase mixed sweet peas.—F. S. Orminston, Bernardsville, N. J.

The F. R. Pierson & Co. prize; for the best three vases of sweet peas, three distinct colors.—Seth Low.

The John Young prize; for the best vase of sweet peas, crimson, one variety only.—Seth Low.

The Jerome B. Rice prize; for the best vase of sweet peas, white, one variety only.—Seth Low.

The Harry Turner prize; for the best vase of sweet peas, light pink, one variety only.—F. S. Orminston.

The Frank H. Traendly prize; for the best vase of orange shades sweet peas, one variety only.—W. W. Rawson & Co.

The Chas. H. Totty prize; for the best vase of yellow, one variety.—W. W. Rawson & Co.

The A. T. Boddington prize; for the best vase of bicolor, one variety.—W. W. Rawson & Co.

The judges were W.... Sim, Cliftondale, Mass.; A. C. Zvolanek, Boundbrook, N. J., and G. W. Kerr.

Canadian-Pacific Turns Gardener.

The Canadian Pacific railroad has gone into gardening. It has established on land it owns near Winnipeg a model garden of 20 acres and has started in to raise flowers and vegetables. The railroad is not going into the business for profit except indirectly. It has been in the hotel business for years, owning and operating many hotels on its line across Canada. This garden at Winnipeg will supply flowers and vegetables for the hotel at Winnipeg, and probably for others to which quick shipments are possible. Greenhouses are to be erected before next winter, so that vegetables and flowers may be raised the year round. Bulbs and plants will be propagated for the beautification of the grounds around the company's hotels and stations all along the line.

Fancy and Dagger FERNS $1.25 per 1000

TRADE FALLING OFF.

There was a decided falling off of business the past week. The weather was exceedingly warm, which told on the quality of stock that came in. Roses are getting scarce and the same may be said of carnations. Sweet peas were not quite as plentiful as the previous week, while Lilium. longiflorum were to be had in quantity every day. Shipping trade was a feature; several good-sized funeral orders from out of town relieved this market of quite a lot of stock.

S. A. F. MATTERS.

The time for respite and recreation has arrived and in the different trade journals we read of this and that party taking a vacation. However, very few of the local craft are figuring on vacations at present as the majority are getting things in shape for the convention next month. We realize that it is quite a task to be the hosts of from 1,500 to 2,000 guests and have them leave our city well satisfied, returning to their homes with the impression that the time and money was well spent.

There was a meeting of the local Ladies' S. A. F. at Lou Kyrk's wholesale house last Friday afternoon to map out a programme for entertaining the Ladies' S, A. F. next month. There were so many different ideas advanced that it was deemed necessary to think the matter over and decide upon something definite at the next meeting. Miss Edith Kyrk reported eight new members and she will notify the members by letter where the next meeting will be held.

The Florists' Society will hold its next regular monthly meeting at the zoological gardens on Saturday, July 10 at 4 p. m. This is second last regular meeting previous to the S. A. F. convention and we want all the members who can possibly attend to do so. Tickets of admission will be mailed by the secretary and if any member who has not received his ticket will notify Albert Sunderbruch he will leave one at the gate for you.

Secretary Rudd was a caller last Friday, having come down from Chicago to consult with the local advisory board of the S. A. F. They were in session until 11 o'clock Friday night and a whole lot of work was accomplished.

C. C. Murphy is the first carnation grower to purchase an automobile. Christ says he is getting too old to risk driving thoroughbreds, having been spilled twice in the last six months.

M. Shattls, representing Lion & Co., New York, was a caller the past week, making arrangements with Will Murphy for space and you can bet he picked a dandy spot.

FLORISTS' SUPPLIES and Cut Flowers

1203 Sutter St., SAN FRANCISCO, CAL.

San Francisco.

Albert O. Stein, of the firm of Stein & Levin, left this city on June 26 for an eastern trip through the principal cities of the Atlantic coast. Mr. Stein is eastward bound to make purchases of goods for the coming decorative season. This is only a small part of the progressiveness of this firm and the first time we have learned wherein a florist of this city has sent east to buy direct from the wholesale houses. Messrs. Stein and Levin are to be congratulated on their success since the fire which threw them both out of employment; without any means or assistance other than their ability they have been able to work and build up a business that is probably unequaled by that of any other florist in this city.

THE SERE AND YELLOW LEAF.

While the glorious Fourth is a holiday, and spread itself over two days this year, the only effect it had on the market was to make things more quiet —if that be possible. Everything is in the sere and yellow leaf with the exception of a few of the summer roses that are given undue prominence because everything else is so poor. Killarney and Kaiserin are the two flowers that stand forth in the limelight and prices held up fairly well on these, but the demand was even less than last week, when (if the bull will be forgiven) there was no demand at all.

The peony situation shows little change. A little stock has been taken out of cold storage, but thousands of dozens still remain and it is an open question as to what will become of the great bulk of them. None of the interested parties are willing to go on record as to the final outcome and, like Micawber, are waiting for something to turn up. While the peony crop this year has been more prolific than in any previous season, and more peonies have been sold, prices have not been as good as last season. This may be accounted for by the fact that while some of the choice varieties were very fine and brought good prices, there was so much poor stock and so much that was almost unsaleable, that the average price was lowered.

Carnations have ceased to be a factor and in fact a great many of the growers are already throwing them out and getting ready for their new planting. There are some fairly good ones on the market that bring from a cent and a half to two cents, but most of them are of very poor quality that sell for almost any offer. Indoor sweet peas, gladioli and Easter lilies are things of the past but there is still a fair supply of the Shasta and yellow daisies. Outdoor flowers are in immense supply with low prices and small demand. A few asters are seen, but not enough to make their presence felt and several growers of this flower state that there will not be such a large supply this year as in former seasons.

Fancy ferns are in great profusion and have a ready sale. Adiantum is the only other green for which there is any call. Taken as a whole the business for the first six months of the year shows a very healthy increase over the first period of 1908 and there seems to be a general feeling that the second half of the year will show a corresponding increase, though this is conjecture, based to a large extent on hope.

NOTES.

Bids for the reconstruction of the greenhouses at Garfield park were opened on Wednesday evening, June 30, at the office of the West Park commissioners and for some reason, not made public, were thrown out and it was intimated that new bids under different specifications would be called for. Lord & Burnham Co., and Hitchings & Co. were the only bidders and there seemed to be some slight feeling of disappointment that no local builders had entered the lists. It is understood that the new specifications will contain a change in the size of the glass used which will increase the expense with no appreciable increase in the efficiency of the houses. No action has yet been taken by the attorney for the board relative to the bringing of suit against the C. E. Carson Contracting Co., who, it is claimed, is responsible for the alleged defects that necessitate the present contemplated reconstruction.

The premium list for the third annual show of the Horticultural Society of Lake Forest, is now out. Many good prizes are offered for all classes of horticultural produce and include a gold medal from the Lord & Burnham Co., New York and Chicago, and special prizes from A. T. Boddington and Harry Bunyard, New York and Vaughan's Seed Store, Chicago. The date of the show is July 21.

Eight new members of the school board having been appointed by the mayor, and several of the reactionaries dropped, it behooves the florists to get busy and see what can be done with the new board relative to having the ban on flowers at school exercises removed.

Ernest Oechslin, who was accidentally shot by the discharge of a rifle that was not loaded in the hands of his nephew last spring, is on the high road to complete recovery and contemplates the building of several new houses next year for the growing of pot plants.

John Thorpe continues in a serious condition. Some heart weakness developed Tuesday of this week, but he had rallied to some extent from this on Wednesday. He is at home, cared for by his three daughters, Margaret, Hattie and Annie, the latter having arrived this week from New York.

The eight new houses at Peter Reinberg's range are nearing completion. The cement bench posts are all in and the glazing is now being finished. These houses will be devoted exclusively to carnations and will almost double the output from this grower.

The attendance at the annual picnic of the Florists' Club should break all records this year as practically all of the retailers, following the lead of the wholesale houses, have agreed to close their places of business at noon on July 22.

Adrian Vanderpoel and wife announce the marriage of their daughter, Henrietta, to John S. Stemper on June 30. Mr. and Mrs. Stemper will make their home at 1813 Springfield avenue after July 15.

John Fuhrmann is remodeling and enlarging his store at 1651 North Clark street. During operations business is going on in temporary quarters a few doors south.

Henry Strail, of A. Lange's, left Friday last for a three months' vacation in Michigan. Mr. Lange will leave July 10 to spend six weeks in the west.

Mount Olson, salesman for the Poehlmann Bros. Co., has the sympathy of the trade in the loss of his son last week by drowning.

Wietor Bros. are not growing any asters this year owing to the fact that all the life has been taken out of the soil and it will be given a rest for a year.

John Smely of Aurora, who met with a painful accident last week, is getting along very satisfactorily and expects to be about again in a few days.

Charlie McKellar, with his wife and a party of friends, took a trip to Milwaukee in his new car last Sunday, making the distance in record time.

Carl E. Taube, manager of the Muskogee Carnation Co., Muskogee, Okla., passed through the city last week enroute to Europe.

John Zech spent a few days this week fishing at Twin Lakes, Wis. Look out for the big fellows on his return.

E. H. Hunt reports that the new Chicago sprayer is meeting with a ready sale and giving general satisfaction.

Bassett & Washburn are showing some very choice Kaiserin roses. Their crop this year is especially fine.

The J. B. Deamud Co. is receiving a fine selection of Japanese iris that show very large flowers.

A. L. Randall is summering at his farm near St. Joseph, Mich.

The Lake Geneva midsummer fair will not occur this season.

Visitors:—Frank Riley of the Iowa Seed Co., Des Moines, Ia.; I. O. Kemble, Jr., and wife, Marshalltown, Ia.; Carl E. Taube, Mgr., Muskogee Carnation Co., Muskogee, Okla.; Ralph Tuttle, Momence; John Karsten, Chattanooga, Tenn.; R. A. Smythe, Benton Harbor, Mich.

* Chicago Florists' Club meeting report will be found on page 1230.

New York.

LESS EVIDENCE OF GLUT.

The business of the past week was light but there was less evidence of glut and congestion than during the week before. The wholesale district has settled down to accept the situation and little grumbling is heard. Much poor stock in roses and carnations is coming in, an inevitable result of hot weather. A few asters are on the market but scarcely enough as yet to class them as factors in the trade. Notwithstanding the great exodus from the city on Saturday, considerable stock moved, but at low prices. The speculators and peddlers as a rule are now crying their wares at the nearby summer resorts and it cannot be denied that the push and enterprise of these men sell a lot of stock that would otherwise be lost.

July 5.—Arrivals are light, likewise the demand. But few good American Beauty roses are coming in and the price has gone a little higher. On account of the Fourth being celebrated today no business of any account is expected, peddlers being about the only customers in the wholesale district. The weather continues very cool and comfortable. A few asters are coming in but not in sufficient quantity or of a quality that warrants quotations of prices.

NOTES.

Geo. Vladios and wife, who conduct a retail store at Eighty-sixth street and Columbus avenue, sailed last week for a visit to Europe. George first saw the light of day somewhere near old Athens, while Mrs. Vladios was born on John Bull's island. Both countries will be visited, and they will return in time for the fall business.

Charles H. Brown, a well known retailer of 412 Columbus avenue, will, about October 1, open another store in the Belnord apartments building, Eighty-sixth street and Broadway. This is said to be the largest apartment house in the world. The Columbus avenue store will be carried on as formerly.

C. A. Ladiges, who has two retail stores on Amsterdam avenue, sailed July 1 on the North German Lloyd steamer, George Washington, for an extended visit to the "Vaderland." He will attend a family reunion in Hamburg, where his aged parents reside and expects to thoroughly enjoy himself.

The summary dismissal from the office of police commissioner by Mayor McClellan, of General Theodore Bingham, has caused great indignation. General Bingham in his capacity as an army officer was formerly superintendent of buildings and grounds (parks) at Washington, D. C.

A number of the Brooklyn retailers attended the Florists' Club outing at Whitestone park, noteworthy being D. Y. Mellis, S. Masur, Albert Laretz and A. Hanig. The Dailledouze brothers, Louis Schmitz, Sr., David McKenzie and others, represented the growers.

It seems that early closing and Sunday closing are bound to come. Several wholesale stores are now closing at 4 p. m. on week days. On Sunday, July 4, the stores of Traendly & Schenck, A. H. Langjahr and Wm. S. Allen were not open for business.

Young & Nugent of Twenty-eighth street had an immense amount of high class work for the funeral of John R. Considine, former proprietor of the Hotel Metropole, who died on June 26.

Paul and Henry Dailledouze sailed on July 3 for an excursion to the maritime provinces. They will visit Halifax, St. John and other points of interest. All wish them a happy voyage.

One of the finest pieces of bedding work to be seen about this city was recently executed by W. E. Nilsson of Two Hundred and Thirty-third street for Woodlawn cemetery.

A. L. Barnett, after an absence of almost two years spent in the west, has returned to this city and will continue to represent Reed & Keller.

A full account of the Florists' Club outing is given in Our Pastimes department on page 1252.

Baltimore.

NO GOOD STOCK.

The "rare days" of June with us were of rare torrid heat; there was nothing else rare or underdone about them. Yet there was also a torrential rainfall. The total rainfall for the month was 4.38 inches, which is .60 of an inch above the average for the month for 39 years. There were only four clear days in the month, and seven thunderstorms. There was hail on two occasions, but not heavy enough to cause any damage so far as reported. The highest temperature was 99°, but the humidity was markedly great, and the weather people say the cloudy and partially cloudy days prevented a still higher range of the mercury. In time for the Fourth of July holidays there was a sudden change and Saturday, Sunday and Monday were cool and clear, with bright skies and invigorating breezes. The parks and country resorts were crowded consequently with thousands of visitors. Under such weather conditions trade has not proved very satisfactory. A good many flowers are coming in, but in some cases it would be as well to relegate them to the dump, that being their final disposition, their quality, both roses and carnations, being far from good. Indeed, practically, it has been difficult to get first class blooms of any sort. Considering the unpropitious meteorological conditions, the demand has been fairly maintained.

A movement is on foot to promote the retiring in the city of the unsightly board fences which at present enclose most residential lots and the substitution of green hedges. A good many advantages are claimed in favor of the innovation—such as the more sanitary conditions which the absence of fences would encourage, better facilities for police protection, the riddance of the abominable and expensive rat nuisance, the refreshing views from back windows of the houses of the green shrubbery instead of the forbidding aspect of bare fences or even when whitewashed. This innovation would lead also to the planting in the yards of more shrubbery and flowers, it is thought, and gradually transform the present unkempt condition of the majority of city backyards. The effect upon travelers, whose railway view of a city is almost always of their backdoors, alleys and fences, would be to give more favorable impressions of one so treated. A number of property holders, and especially the women who are property holders, approve the plan with enthusiasm. Some ladies who own property on Bolton street have substituted green hedges for the lateral fences which divided four city lots and these are pointed to as examples of the happy results obtainable. Privet, which is of rapid growth, makes a dense and glossy barrier and is very reasonable in price, is recommended for the object in view.

Richard A. Vincent, vice-president for Maryland of the Society of American Florists, has issued an appeal to the craft to make a large and representative turnout at the annual convention in Cincinnati, August 17-20, in view of the prominence in horticulture which the state has acquired in the past few years. It is impossible at this early day to ascertain who are likely to attend. S. B.

THE ROSE SHOW.

The exhibition hall in the Auditorium proved none too large for the Minnesota Rose Society's annual flower show which opened there June 25. There were 227 entries, some of which comprised many vases and jars of flowers, while others were limited to a single blossom. Most of the exhibitors declared that the exhibition anticipated by a few days the height of the rose season. But the peonies were still in their first flush of beauty and so many fine specimens have probably never been assembled here before. The display of perennials of all current varieties was large and interesting, comprising some beautiful pyrethrum from A. H. Stem's Dellwood garden. Iceland poppies and a large display of Siberian and Spanish iris from Miss Helen Bun's garden, Rocky Mountain columbine from the garden of Mrs. T. L. Wann at Dellwood, and smaller exhibits from the city gardens. There were in all 35 exhibitors, all of them members of either the Minnesota State Rose Society or the Institute Gardening Club.

Meriden, Conn.

Geo. E. Butler reports that in spite of the hard times business has been very fair. Good bedding stock has sold better than ordinarily.

J. A. Greenbacker has started a new 90-foot modern house.

HARRISONBURG, VA.—J. E. Plecker, formerly of Staunton, is building greenhouses here and will soon be ready to start the growing of cut flowers and pot plants.

ST. CATHERINES, ONT.—The annual rose show of the Horticultural Society was opened in the Armory June 25. The display of flowers was larger than at any previous show held by the society. J. Horace McFarland, who has made himself conspicuous in Canada and the United States by his lectures on "Save Niagara Falls," and as president of the American Civic Association, was in attendance as the guest of William B. Burgoyne, president of the society.

HAMILTON, O.—Wm. Lodder, of Lodder & Son, has just celebrated the anniversary of his birthday.

FREEPORT, N. Y.—Three boys, all about 15 years of age, were arrested for breaking into Clarence Anker's retail store June 25.

Philadelphia.

SUMMER DULLNESS.

The usual summer dullness prevails. A little doing in the stores in the morning for the funerals or the steamship and seashore trade and a little shipping for the night expresses winds up the business for the day. There is plenty of stock but the quality is poor the extreme hot weather of the latter part of June being particularly hard on roses. My Maryland is in good shape and there are a few American Beauties of the local stock that are passable but Bridesmaid and Killarney are hardly worth offering. White roses of any kind have been very scarce the past week, the Carnot coming in being eagerly grabbed up. Carnations are fairly plentiful but are getting small and much off color. There are plenty of gladioli and asters are coming along nicely, a few very fine flowers being seen. Sweet peas are in demand but are getting low in quality. Lily of the valley is scarce, the growers apparently working off their weak pips during the dull season. The feature of the past week was the large demand of flowers for the Durham funeral. "Dry" Durham, as he was called, was the great boss politician of the city and when he died all the large and small political lights felt it incumbent on them to send flowers. According to Wm. Graham, of the Habermehl staff, who arranged the pieces, there were 143 separate designs and clusters. These ranged in price from $5 to as high as $300, one large orchid and lily of the valley wreath being valued at the latter figure. Many of the designs were elaborate and well made, while others were far from being a credit to the trade. There were ladders of life, clocks, vacant chairs, gates ajar, broken columns, urns, setting suns, wreaths flat, standing, and on easels. One standing wreath was so large that it had to remain in the back yard, as they could not get it through the door. There were many very beautiful wreaths and elaborate clusters. Orchids were largely used, as were American Beauty roses. The total value was estimated to run between $4,000 and $5,000. After the funeral many of the designs were sent to the hospitals. Such disposition of funeral flowers is past our understanding. Crosses and wreaths, gates ajar, broken columns and the like do not carry a very cheerful message to the sick. "Better wait until I am gone" would be the words of the sick man who would have one of these placed near his cot. When funeral flowers have filled their mission at the house of the deceased they should either proceed or follow the body to the cemetery and there finish their short life of usefulness.

FLORISTS' CLUB MEETING.

The feature of the July meeting of the Florists' Club, July 6, was the paper prepared and read by Edwin Lonsdale on "The Adornment of the Lawn," for which he received the thanks of the club. This was a very interesting essay, full of suggestions and up-to-date ideas. It will appear in the next issue of the AMERICAN FLORIST. Convention matters were taken up and there bids fair to be large delegations from this city. Bowling teams of ladies and gentlemen to represent the club in the various tournaments are working up enthusiasm and hope to make a good showing at Cincinnati. Hotel and pool room committees were appointed and directed to make reports at the August meeting.

NOTES.

Robert Crawford, Jr., 235 South Eleventh street, will open a branch in October at Fifty-second and Market, in one of the stores which Jacob Becker is erecting to take the place of his greenhouses. Mr. Becker was entirely surrounded by stores and they being in such demand he has torn down the greenhouses and will erect stores in their stead. Mr. Crawford's is to be a fine, modern, up-to-date store with a greenhouse 80 feet long in the rear. He expects to open in October with his son William in charge. He is also remodeling his store on Eleventh street, which, when completed, will give him additional room.

John E. Andre of Doylestown has concluded to continue the business of his father, recently deceased. It was first offered for sale but will now be continued and run as before except that the houses are now all planted with Killarney roses. It is an up-to-date place in every respect, the flowers being handled by the Leo Niessen Co. K.

Boston.

VACATIONS IN ORDER.

The local markets and shops show summer quietude and vacations seem to interest everybody more than anything else. Funeral work is coming in slowly and outside of this there is absolutely nothing doing. Stock is in poor condition and anything that is really first class is quickly sold. Roses are about the poorest proposition. Kaiserin is in grand shape, easily eclipsing anything in the way of colored roses. American Beauty is practically out of the market, also Richmond, while Killarney is not much better. A lot of good carnations are being received but $1 per 100 is the best price. Thousands of ordinary quality are disposed of at prices from $2.50 to $5 per 1,000. Sweet peas are poor.

BOUND FOR EUROPE.

P. N. Carbone, accompanied by Mrs. Carbone, sailed on the steamship Romanic July 2, for a summer trip to Europe which will be one of business and pleasure. Mr. Carbone has leased an attractive store at 342 Boylston street, one block from his present location, which will be occupied September 1, after extensive alterations now being attended to are completed. This is one of the best locations in the city and should be a successful step for this firm.

Martin Tuohy, the mayor of South Boston, and incidentally the leading florist of the district, sailed during the week for an extended trip to Europe. From there he has planned a hunting expedition through Africa, returning late in the fall. Martin was given a royal send-off by his numerous friends, many of whom gathered at the dock to say a last good bye.

A. Leuthy, the plant specialist, is booked for his regular trip to Europe and will sail the coming week.

David Welch, of the wholesale house of Welch Bros., has the European fever and will sail this month.

NOTES.

The public spiritedness of our citizens was again exemplified when, through the generosity of Larz Anderson and wife of Brooklyn, the public was invited to inspect the wonderful estate created and maintained by this couple, and upon which they spend their summers. For two days the grounds were visited by thousands of interested sightseers. The chief centers of interest were the Italian and Japanese gardens, the duplicates of which are unknown in this part of the country, the models being secured abroad and erected upon the estate at an enormous expense.

The annual exhibition of the North Shore Horticultural Society was held on the grounds of the Essex county club, Salem, June 30 and July 1. The exhibition was the most successful ever undertaken and the displays possessed unusual merit. B.

Chicago Florists' Club Meeting.

There was an exceptionally large attendance at the Florists' Club meeting July 1, for a hot summer evening. President Asmus was in the chair and some 30 members made themselves comfortable about the room, President Asmus graciously permitting coats off. One of the matters of chief interest was the election of a secretary, the recently adopted rules providing a single secretary in place of the old recording and financial secretaries. Louis Winterson and Frank Johnson were the nominees. As both gentlemen had expressed their disinclination of assuming the role both are to be congratulated, the former at having his wish gratified and latter at being given the job. A new board of three trustees was elected to succeed the old board of five; Leonard Kill, F. F. Benthey and H. N. Bruns were chosen. Chairman P. J. Foley of the transportation committee made a humorous report, the gist of which was that the Monon route was the one decided upon for transportation of the party going from this city to the S. A. F. convention at Cincinnati and that this party would be royally entertained all the way with special music and other features, most of which were left to a well whetted imagination. The hour of leaving after some discussion was left entirely to the committee. W. N. Rudd spoke in favor of a night trip with an evening's entertainment in the city for the out-of-town delegates. He said there would be a party of 15 from Denver with a nice delegation from the northwest, including Omaha and Milwaukee.

Chairman Ed Enders of the Good of the Club committee reported concerning the arrangements under way for a picnic July 22 to be given in the grove adjoining Riverview park. From the glowing report made it would appear that this picnic would eclipse all former ones and its easy accessibility from the heart of the city and the fact that all of the wholesale dealers and most of the retailers have indicated their intention of closing their stores at noon on that date ought, with good weather and the many agreeable features planned, to guarantee a large attendance and a royal time.

Secretary Rudd of the S. A. F. was called upon to speak of the coming Cincinnati convention. He urged a large local delegation and spoke of the prospect of an unusually interesting gathering. He said that the exhibition hall would be the largest any S. A. F. convention has yet had. The well arranged programme, the hotel accommodations of the convention city, as well as the fine bowling team promised by the club, he urged, should induce every member to go.

President Asmus spoke of the sad accident to Joseph Smely, of Aurora, mentioned in our last issue, and T. E. Waters was appointed a committee of one to convey to Mr. Smely a basket of fruit voted him by the club. Two new members were elected: M. D. Neely, 144 Milwaukee avenue, and F. C. Morris of Hinsdale. The following were proposed for membership: James Curran, 2909 Archer avenue; August Dressel, 75 Southport avenue; T. C. Yarnall, representative of the AMERICAN FLORIST, and Frank E. Benthey, W. F. Hoerber and Fred Hoerber of Des Plaines. In accordance with a motion made at the last meeting, President Asmus appointed a committee to print the revised by-laws, together with the names of former presidents, the present roll of members, etc., this committee consisting of Frank Johnson, of the A. L. Randall Co.; Frank Pasternik, of the Ernst Wienhoeber Co., and H. C. Lenington, of THE AMERICAN FLORIST.

ABSOLUTELY THE BEST POSSIBLE SERVICE.

Business Hours 7 a.m. to 6 p.m. 1619-1621 Ranstead St., PHILADELPHIA, PA.

Worcester, Mass.

Business continues good for this time of the year, consisting of funeral work and small wedding decorations. The larger part of the growers are busy planting both in and outdoors; this has been an exceptionally good year for bedding plant sales, nearly all of the plants being sold. Carnations are doing better this year in the field than usual, very few plants being lost from stem rot, probably on account of the dry weather we have had for the past four weeks.

While outdoor crops are good in most cases, due largely to the cold late spring, if there is not some rain in the next few days quite a lot of stock will suffer from the effects of the prolonged drought as well as insect enemies, which are quite numerous this year.

H. F. A. Lange is doing some extensive repairing this season on some of his oldest houses.

The rose show of the Worcester county Horticultural Society held June 24 was exceptionally good. The roses were very good, the campanulas, foxgloves and dianthus were in excellent condition. The feature of the exhibition was a display of peonies by T. C. Thurlow of West Newbury, there being between 60 and 70 varieties in the group. Other exhibitors of peonies were: Mrs. J. F. Record, James Edwin Draper, Mrs. Edward Warren, Mrs. S. E. Fisher. The exhibit of strawberries was the best ever shown in the hall, both in quantity and quality. The hall was open from 3 to 9 and there was a large crowd present from the time the door opened until it closed. The awards were as follows:

Roses 12 blooms.—W. A. L. Bazeley, first; M. J. Whittall, second; Addison L. Bemis, third; Charles R. Fish, fourth.

Roses 6 blooms.—Mrs. J. C. Wheeler, first; W. A. L. Bazeley, second; M. J. Whittall, third; A. L. Bemis, fourth.

Twenty vases hardy plants.—M. J. Whittall, first; Mrs. J. C. Whitin, second; W. A. L. Bazeley, third.

Vase rose, one color.—M. J. Whittall, first; Mrs. J. C. Whitin, second; Clifford H. Wilson, third.

Mixed.—M. J. Whittall, first; Mrs. J. C. Whitin, second; Mrs. F. W. Hixon, third.

Campanula Media.—Charles R. Fish, first; L. C. Midgley, second; Addison L. Bemis, third.

Dianthus barbatus.—C. R. Fish, first; Mrs. S. E. Fisher, second; W. A. L. Bazeley, third; Mrs. Percy G. Forbes, fourth.

Foxglove.—C. R. Fish, first; W. A. L. Bazeley, second; Harriott B. Andrews, third; J. E. Draper, fourth.

Gratuities.—Delphinium, A. L. Bemis, C. R. Fish, Mrs. A. E. Underwood. Peonies, J. P. Porter, Mrs. E. Warren, J. E. Draper, Mrs. J. Frank Record. Hardy perennials, C. R. Fish. Hardy pinks, Mrs. E. J. Whitney.

FUNERAL WORK PLENTIFUL.

Trade was considerably quieter last week; the schools are all closed and most people gone to the country or seaside. The wedding decorations are still the most important part of the business. There has been some very elaborate ones lately, notably the one at the Rawlings wedding; the decorations were furnished by Harris & Hopton. This was the biggest of the season, immense quantities of laurel and white lilacs being used with great skill. The demand for funeral work has been quite active lately; automobile accidents and drownings seem to stand on the order of the day amongst the wealthy. Roses under glass perhaps will be less grown than last year. There is an increased demand for pot plants during the winter months, especially at the holidays and it is pretty difficult to produce them as good as the western specialists.

JUNE FLOWER SHOW.

The June show of the Gardeners' and Florists' Club came off very successfully. The prize winners were as follows:

Twelve pansies.—S. Vril, first; J. Pidduck, second; J. Luck, third.

Twenty-five pansies.—J. Luck, first; G. Miles, second; Hall & Robinson, third.

Six peonies.—J. Pidduck, first; S. Vril, second; Hall & Robinson, third.

Six iris.—J. Luck, first; W. S. Watts, second; G. Miles, third.

Twenty-five peas.—Hall & Robinson, first.

Six roses, red.—Hall & Robinson, first.

Six roses, pink.—Hall & Robinson, first.

Six carnations, pink.—J. Luck, first.

Vase iris.—R. Burrows, special prize.

Vase peonies.—R. Burrows, special prize.

Vase double nasturtium.—J. Luck, special prize.

One Gloxinia.—G. Miles, first.

The judges were John Walsh and Charles Eddy.

L. J. Forget Ste. Anne de Belleuve is building a U Bar greenhouse, and Sir William Van Horne builds two conservatories of the same make.

The Seed Trade.

American Seed Trade Association.

I. C. Robinson, Waterloo, Neb., Pres.; M. H. Durvea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D. C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, June, 1910.

CALLA bulbs are a short crop in California.

EARLY shipments of French bulbs are now traveling on the water.

THE A. C. Kendel Seed Co.'s store in Cleveland, O., is being remodeled and rebuilt.

ONION SETS at Chicago seem to be doing very well and at date promise a good crop.

W. ATLEE BURPEE and his son, David Burpee, returned to Philadelphia June 28 and report a terribly hot trip across the desert.

OKLAHOMA CITY, OKLA.—The Western Seed Co.'s bankrupt stock will be sold, July 12, in this city. There is a fresh stock of seed and a complete line of florists' supplies, with large refrigerators.

THE Detroit Free Press of July 1, referring to $800,000 capitalization of the D. M. Ferry & Co., says that $25 shares are estimated to be worth $250 each and says there is strong sentiment for larger capitalization.

COLUMBUS, O.—The Livingston Seed Co., in order to meet the demand for larger quarters, has closed a long-time lease for a new four-story brick building in East Chestnut street. The company will occupy the entire building with its seed and mail order departments.

Maurice Denaiffe.

The accompanyng portrait is of Maurice Denaiffe, the junior member of the firm of Denaiffe & Son, Carignan, France, which was established in 1810. He is at present making a tour of the eastern section of the United States, this being his first visit to this country. His house stands high in France as growers on contract. It also does an extensive mail order seed business, issuing 1,000,000 catalogues by mail annually and is one of the largest grass seed houses in France. Mr. Denaiffe's grandfather, who is still living, and his father, have both been decorated with the Legion of Honor for their meritorious work in agriculture and horticulture in their native land.

Braslan Seed Growers' Co.

Lettuce Onion, Sweet Peas.

Growers For the Wholesale Trade Only.

SAN JOSE, CALIF.

Government Seed Contract for Distribution Spring of 1910.

BY BURNET LANDRETH.

If the National Department of Agriculture is determined to give out a so-called seed-growing contract, I would just as soon see my respected acquaintance, A. J. Pieters, get it as any person, yet why should anyone get a growing contract when the seeds later on could be purchased in the open market and their absorption be a benefit to the seed business? It will not do to allege that without an advance contract varieties cannot be obtained, and that consequently they must be grown expressly, because the

Maurice Denaiffe.

Of Denaiffe & Son, Carignan, France.

sorts actually ordered are not new introductions, only common seeds of hackneyed varieties, obtainable at any period of the year and from many sources.

A brief review of the so-called growing contract may be interesting as indicating what families of vegetables, in the opinion of the wise heads of the Bureau of Agriculture, at Washington, are the things most wanted by the hungry farmers of the United States, men who are eager for Brussels sprouts, endive and kohl rabi, men who dream about Brussels sprouts, endive, kohl-rabi, almost with the same burning impulse as politicians cry out for an appropriation and the flag. The following is the list of seeds appearing as wanted on the list of the Department of Agriculture, dated February 1, 1909:

	Bushels.
Dwarf beans	594
Pole beans	628
Lima beans, dwarf and pole	800
Corn	2,006
Peas	1,314
	Pounds.
Beet	6,053
Carrot	11,819
Collards	1,360

No sane seedsman will believe for an instant that these seeds will all be of crop 1909. The peas, beans and corn probably will be, although not all necessarily so, but of the small seeds it is not likely one-tenth will be new crop, 1909, whether American or imported. Considerable portions of everything no doubt will be imported, and most imported seeds may be of old crop seed which could be bought in midsummer or autumn just as well as they could be engaged last spring before any appropriation was made by congress for the distribution of spring 1910, or, if the particular varieties named could not have been procured, other sorts as good, or better, could have been, but no doubt many of these seeds were on hand, and no doubt there will be cheap substitutes enough to please the band.

It is really interesting to read the items governing the bid. Take item 6, for example, where in the language of the circular: "The department's representatives shall at all times inspect the growing crop, wherever it may be." The reader will notice that several representatives are thus mandatorily provided with "joy rides," even as far as California, for does it not state "wherever the crop may be." Oh, what a good time!

In article 7 is the stipulation that "the contractor, may upon written order from the department, substitute any other variety of seed in place of the variety contracted." This looks like a big opportunity—the contract is mush—just mush to be juggled with.

Article 3 states in the choice English of the circular: "Bids to be made upon the total quantity of seed, and not upon 'individual' items." This provision cuts off many reputable seed growers who might be bidders on specific items. More than this, it is rumored that only eight or nine parties were favored with being asked to make bids, and it would be interesting to know who were the chosen seedsmen.

Is it not time that the American seed trade should in some way adopt measures to put a stoppage to this most ridiculous distribution of free seeds? On the one hand a restraint of trade, and on the other hand a parody on national management, a practice which brings the Department of Agriculture into disrepute and satire, and which would be deeply humiliating to any secretary of agriculture possessing the attributes of those other men who occupy like positions

Joseph Heacock Co., Wyncote, Pa.

under any dignified department of government.

Our national post office department looked at in a commercial way is not profitable and surely this department would be relieved of great expense if it had not to transport a great many tons of garden seed packages all over the United States. Surely, here is a great chance for President Taft to reduce expenses for the national government.

[The valuable and unusual provision in the contract referred to, allowing the bidder to substitute certain other varieties of one family of seeds if the bidder is short of the one called for, is a new one.—ED.]

Imports.

During the week ending July 3 imports were received at New York as follows:

Julius Roehrs Co., 71 pkgs. plants.

Maltus & Ware, four cases plants, two cases bulbs.

Yokohama Nursery Co., 1 basket plants.

T. W. Wood & Sons, 55 bags seed.

To others, 14 cases plants, 903 bags, 101 cases seed, 9 pkgs. bulbs, 6 cases orchids.

Thought Millionaire in Need.

Jerome B. Rice, a millionaire seedsman of Rochester, an invalid who travels in a wheel chair, was waiting with a lapful of papers at Detroit for a boat. "Here, I don't want any papers," said a ragged-looking dock rat, mistaking him for a needy newsdealer, "but you can put these in your kick." He left two pennies.—New York Herald.

Cleveland.

STOCK TOO PLENTIFUL.

Business the past week continued slow. Carnations, although not quite so plentiful, are still overabundant, and many are being sold in job lots; still others go to the dump. The quality is not as good as it might be, either in size or lasting. Sweet peas are coming in by the wagon load; every commercial grower and some who are not, are sending the outdoor peas in in immense quantities, with the result that they are being sold at very low prices even for the best grades. A fine lot of Japanese and Harrisii lilies are now in but the call is limited. Water lilies have a good call and the quality is exceptionally good. Smilax and asparagus have been poor sellers the past week. Dagger ferns are getting cheaper.

NOTES.

The A. C. Kendel Seed Co. has moved its store up stairs next door to the old place, while contractors are rebuilding and remodeling the old store. Yollis Bros., who conducted a flower and postal picture card stand in front of this place will have to move to some new location.

William G. Nauman, Doan street, and his cousin, will leave for an extended trip through Germany and France about July 14. They expect to be gone about two months, and will combine business with pleasure.

Fifteen florists and floral concerns of this city have agreed to co-operate with Supervisor Bloomberg of the city playgrounds in carrying out a plan that will bring a day of flowers once each week to the children of the crowded city districts. Friday, July 2, was the first flower day. Flowers have been donated by the florists for distribution among the children of east side playgrounds. C. B.

St. Louis.

LITTLE DOING.

We have had during the past week a spell of extremely hot weather, the humidity making it most uncomfortable for every one. There is little doing, an occasional wedding or funeral causing the only outlet for flowers. The intense heat has told on the sweet peas and they will soon be a thing of the past. The Florists' Club meeting next week, the picnic, and then the dull summer season. The growers, however, will be kept busy cleaning, painting and renovating their houses.

Carnations and roses of good quality are eagerly sought after. Light colored gladioli are in demand. Fancy ferns are now quoted at $2 per 1,000.

The Missouri State Board of Agriculture met Tuesday for three days' session at the Woman's Magazine building. Mayor Lewis presided on the first day. E. W. Allen, of the University of Missouri, spoke on "Picking, Packing and Marketing of Fruit." Professor Irish spoke on "Model Farms for the City." A banquet by the mayor, also a banquet at Shaw's Garden was given by Director Trelease. Many members of the Florists' Club attended.

The wholesale houses are now closing at 5 o'clock in the evening and 12 o'clock on Saturdays. This is much enjoyed by the employes. The retailers are not so fortunate.

Mrs. George Angermueller will leave on a visit to her folks at Buffalo. George, however, has to be satisfied with a 10-day local fishing excursion.

F. C. Weber's window was decorated with a large American flag on the Fourth. F. C. Weber, Jr., has full charge in the absence of his father.

Kahr's Floral Co. will remain open all summer with reduced help.

W. F.

Kentias, Arecas, Asparagus.

Kentia Belmoreana.

The above cut shows the plant in 8-in. pot, at $6.00 each.

Kentia Belmoreana

The following lis of **Kentias** shows an exceptionally fine lot of perfect plants, sure to give satisfaction:

					Each
3-in. pot,	4 leaves,	height	10-12	.....	$2 00 per doz.

GEO. WITTBOLD CO., 1657 Buckingham Place, Chicago.

Albany, N. Y.

SCHOOL FLOWERS AGAIN.

Thirty-eight members, besides guests, attended the July meeting of the Florists' Club, held at the establishment of President Frederick Goldring, Slingerlands. The principal subject discussed was brought up by Fred A. Danker, who called the attention of the members to the recent ruling of the school board of the city prohibiting the delivery of flowers at the halls in which the commencement exercises of the public schools are held. Mr. Danker called attention to the successful efforts of the AMERICAN FLORIST and the Florists' Club of Chicago against the action of the school boafd who had promulgated a similar edict. The speaker said that the matter has come up in several cities in the country and is of sufficient importance to be taken up at the annual convention of the S. A. F. in August, where it is expected that the matter will be thoroughly discussed. The board did yield to the extent of waiving the enforcement of the ruling until 1910 but the local florists are anxious that the board leave the matter as it has been for years in this city. It was finally decided to leave the matter to a committee of 10 to investigate and to report as to ways and means. The committee named by President Goldring is composed of: Fred A. Danker, H. G. Eyres, Edward F. Meaney, W. C. King, Alfred E. Whittle, Louis Menand, Patrick Hyde, Fred Henkes, Herbert E. Whittle and W. C. Gloeckner.

The subject of closing Saturday afternoons during July and August and at 5:30 p. m. on week days was referred to a committee composed of Thomas F. Tracey, John J. Butts and A. D. Wemple. Two proposals for membership were submitted: Arthur J. Smith and Fred Keller. Mr. Keller a short time ago purchased the establishment of Reinhold W. Zebel on the Troy road. Among the visitors who greatly enjoyed the meeting and the social features was R. J. Irwin of the Skidelsky & Irwin Co., of Philadelphia, who was in this section calling upon the trade at the time. Following the meeting, refreshments were served by the host and after an informal social time the members went home to meet again at the establishment of Fred A. Danker on Thursday, August 5. The flower show committee, of which Fred A. Danker is chairman, has distributed among the school children of the city 200 chrysanthemum plants which the owners are to grow for the show to be held in the state armory in November. The club has stimulated interest by offering gold prizes for the best plants in bloom, $5 for the best specimen and $2.50 for the second. R. D.

Rose Leaf Hopper.

At this season of the year when the roses are in bloom, the damaging effects of the leaf-hoppers or white bugs under the rose leaves, are most noticeable, because everybody is attracted to the beautiful blooms, and then confronted with the spectacle of bleached and withering leaves and bushes being denuded of foliage.

The rose hopper is most active in its operations about the middle of June. Professor H. A. Surface, the state zoologist, Harrisburg, Pa., says: "It has a piercing or suctorial mouth, and consequently does not eat away the tissue of the plant, but injects a poison and sucks the juices. Owing to their immense numbers they cause considerable damage. The eggs are laid on the underside of the leaves. The young are hatched there, and first look like small white plant lice, but are active and run quickly. The white castoff skins remain on the under sides of the leaves. The young insects have no wings and, therefore, do not fly, and cannot escape the insecticides applied as sprays. When full grown they are light in color and winged, and jump and fly quickly, and may escape the spray. Where the hoppers are at work the upper sides of the leaves will present a grayish appearance along the midribs. The whitened leaf denotes their presence.

"Spray the under sides of the leaves with a solution made by dissolving one pound of whale-oil soap in six gallons of water, or with a very strong tobacco decoction, or eight per cent kerosene emulsion, or with a strong solution of any kind of soap. Being sucking insects, they cannot be killed by the arsenical poisons, which are used effectively against the chewing insects. If the insects hop to the ground they can be killed by spraying the ground with a stronger solution which will not there do any injury to the plants."—Pittsburg Dispatch.

ASTER PLANTS

Semple's, Vick's and **Queen of the Market,** fine plants, grown from the best seed, three colors: $2.50 per 1000: $10.00 per 5000.

GERANIUMS, 4-in., in bloom, $4 00 per 100: 2½-in., $1.50 per 100; best varieties.

CABBAGE PLANTS, all kinds, from the field, $1 00 per 1000: 5000 for $4.00.

CAULIFLOWER, and **PEPPERS,** $2.50 per $1000.

TOMATOES, all kinds, $1 50 per 1000.

J. C. SCHMIDT, Bristol, Pa.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

CONSUL HARRY A. CONANT, of Windsor, writes that a branch Canadian factory is being erected at Leamington, near there, by a Pittsburg pickle concern, and will start operations during June.

CHARLES FEIRSTEIN, a prosperous truck farmer of Hyattsville, Md., met his death under peculiar circumstances June 26. He was driving his cows home and one of them, it is thought, in fighting a fly drove her horn through Mr. Feirstein's leg. Bleeding profusely he fell or lay down and was found later having bled to death.

Up-To-Date Manuring.

It is now recognized that mixed manures—manures, that is, which consist of more than one constituent—are more valuable than those which only give one kind of plant food, such as nitrate of soda. This is well seen in the fact that though nitrogenous manures alone are very useful for cereal crops, they do much more good when mixed with other mineral fertilizers. Where this is the case a lot more corn is grown, as the Woburn and Rothamsted experiments have clearly brought out, and another point worth mentioning is that quality does not seem to suffer in the way that it does, judging by the weight per bushel, when nitrogenous manures are used alone. The latter do not give corn of the highest value, as the experiments of recent years have proved, and nitrate especially has consistently been responsible for some of the lowest bushel weights as compared with mixed manures.

Lime, again, is best used in conjunction with a manure, and experiments point to improved quality and early ripening, as well as a sometimes noticeable increase in weight per bushel. The old adage, "Lime and lime without manure will make the farm and farmer poor," may be recalled, dating, doubtless, from a time when the value of a good complete natural manure was perhaps more appreciated than it is now. Farmyard manure is, of course, the best of these, and except for its bulk and rather slow action it has everything in its favor. Where artificials continuously used are apt to fall off in their results after a term of years, farmyard manure comes out strong in continuous merit, as 30 years of experiment at Woburn prove, the last 10 years' average showing but little falling off from that of the previous 20. The same cannot be said of the plots manured with artificials, which show a considerable shrinkage as the years roll on, although the complete manuring—nitrogen, potash and phosphates—still goes on giving a markedly good result in the corn grown, more especially in the wheat than in the barley of recent years. Indeed, experiments of all kinds have often shown the economy and wisdom of not limiting the manure to one constituent, though this, of course, may be done if the others are known to be present in the soil in sufficient quantity; but this is a point which must often be merely guesswork.

In this case nitrate as a top dressing for roots or corn, or phosphates, may be more cheaply and simply used than a mixture, some of the constituents of which would not be required. They should not be used in excess, however, in any case, as the residium left in the soil is less likely to be useful than that of a mixed manure; and much waste has been incurred at Rothamsted, it is found, by using very heavy dressings—that gave, in fact, no better return than about half the quantity used. Nitrate was noticeable in this way. There are natural limits, it has been found, to what a plant will take up in the way of food even on a poor soil, and it is wasteful to go beyond these, as a rule, because the balance left in the ground may be deteriorated in character or washed out of the land.—Journal of Horticulture.

Lilium Harrisii, Now Ready for Delivery :: ::

Our first consignments have just reached us, and we are now filling early orders. **Easter comes very early next year, March 27th,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to purity and freedom from disease, and not the late type now so often furnished.

6- 7-in. bulbs, 350 to the case.....$ 6.00 per 100; $ 55.00 per 1000
7- 9-in. bulbs, 200 to the case..... 9.00 per 100; 85.00 per 1000
9-11-in. bulbs, 100 to the case..... 20.00 per 100; 180.00 per 1000

Full case lots at thousand rate.

Large Specimen Hydrangeas

In tubs and half-barrels. For July and August flowering.

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season; flowers are just beginning to show color. Extra fine plants in tubs, $3.00 each; very large specimens in half barrels, $5.00 and $7.50 each.

The Nursery Trade

American Association of Nurserymen.

C. J. Brown, Rochester, N. Y., President; C. M. Hobbs, Bridgeport, Ind., Vice-President; Geo. C. Seagar, Rochester, N. Y., Sec'y.

Thirty fifth annual convention to be held at St. Louis or Denver, June 1910.

VERY elaborate precautions are being taken in Maine to locate incipient forest fires and prevent their spreading.

TRENTON, N. J.—D. A. Marshall has purchased the nursery recently owned by Geo. Wainwright and will continue to run the place.

THE Denver Convention League is offering strong inducements in a letter sent out June 26 to secure the convention of the American Association of Nurserymen there in June, 1910.

LEE'S SUMMIT, N. J.—M. Butterfield & Son of the Lee's Summit Star Nurseries have dissolved partnership. M. Butterfield, the senior partner, has retired. His son, J. S. Butterfield, will continue the business.

ROCHESTER, N. Y.—The rose grounds at Ellwanger & Barry's nurseries have been thrown open to the public the last two weeks and there has been a splendid display all over the 10 acres or so given up to the culture of hardy roses.

MONTCLAIR, N. J.—Henry E. Wrensch, Sr., a landscape architect and a member of the Montclair Shade Tree Commission, is at his home, 51 Portland place, suffering from the effects of a shot wound in the forehead. The shot has been removed. It struck a bone of the skull just over the right eye and flattened out. Had it hit one inch lower Mr. Wrensch would probably have lost the sight of his right eye. No serious consequences are feared, although the injured man is suffering great pain. It is thought the shot was fired by boys who were using an air rifle in the vicinity.

Trees and Shrubs at Rochester, N. Y.

Deutzia Sieboldiana, a neat compact shrub not over two feet, with numerous slender racemes of small white flowers, with prominent yellow disks, was in bloom on June 25. D. Vilmoriana is still flowering. D. myriantha has corymbose clusters of showy white blossoms nearly one inch in diameter and came into flower June 24. D. scabra (crenata of nurseries) has a number of interesting forms of which the earliest to bloom is Pride of Rochester, which opened its first flowers June 22. Other varieties now in bloom are Plena, Wellsii, Watereri and Purpurea Plena, and they are all variously showy.

The mock oranges are now conspicuous features with their showy white blossoms. They hybridize easily and there are a great many in cultivation under specific names so that it is difficult to say what they are. About the first to bloom is Philadelphus grandiflorus, with flowers two inches in diameter and this was in bloom on June 17. P. Satsumi has loose racemes of smallish flowers and follows the former in blooming in two or three days. P. coronarius flowers about the same time as the last, and has dense clusters of fragrant creamy white blossoms. P. tomentosus has seven to nine white flowered clusters and flowers with the two last. P. Falconeri has very distinct narrow petaled blossoms that have a star-like appearance and was in full flower on June 25. P. latifolius, a very tall coarse growing species, and P. laxus, with a somewhat drooping habit, are now coming in bloom. P. microphyllus, an interesting small-leaved species which forms a neat compact bush, with smallish neat clusters of white flowers, is now coming in bloom. This species has proven valuable as one of the chief hybridizing factors in producing the numerous and highly valuable hybrids that have lately been raised and disseminated in France. These are splendid garden plants, but there are so many of them that we will only mention a few of the best, namely, Bouquet Blanc, Gerbe de Neige, Boule d'Argent, Mont Blanc, Candelabra, Erectus, Avalanche, Voi Lactee and Mer de Glace. These are all in bloom at present and they are important acquisitions in the decoration of gardens.

The European privet (Ligustrum vulgare) in several varieties are now in full flower, with small white flower clusters. L. Ibota and L. citrata are now coming in flower. Hydrangea Bretschneideri, with its prominent, showy, white cymes is now in good bloom and what a beautiful garden shrub it is. Itea Virginica, with its spikes of white flowers, is now in bloom. Styrax Japonica was in full flower June 21. The pendulous white flowers are very pretty. Fontanesia Fortunei, with its greenish white flower clusters, was in bloom June 17.

The hybrid rhododendrons are now past. About the last to bloom here was Memoir, with blush white flowers and prominent yellow spots on the upper segments, and with a dense compact truss. It was in full flower from June 17 to June 20. This has bloomed for the first time, and we hope it will prove hardy. Delicatissimum is a hybrid between R. maximum and R. Catawbiense, with delicate blush flowers, and was in good bloom about June 20. R. maximum is now coming in flower. Amongst the dwarf kinds, R. arbutifolium, with deep pink blossoms, has been in bloom since June 25. R. ovatum, with pale pink blossoms, has about passed out of flower. R. myrtifolium, with attractive pink flowers, is now in good order. R. hirsutum, with rosy red flowers, is now coming in bloom. R. Goveniamum, a curious form, said to be a hybrid between Azalea nudiflorum and R. Catawbiense and R. ponticum, is now in bloom. The small clusters of dark lavender blossoms are mostly hidden amongst the leaves. The leaves are semi-persistent. This has been here for 17 years.

Amongst some Ghent azaleas in good bloom on June 17 were Prince Henri des Pays Bas, blood red; Alice Bauman, a pretty combination of pink, white and yellow; Madame Joseph Bauman, salmon striped with white and orange; Imperator, a suffusion of yellow and rosy pink; Maria Dorothea, blush white with deep orange yellow spots; Bouquet de Flore, salmon rose with white stripes. There are some individuals of A. calendulacea still in good bloom. A. arborescens, a most beautiful species from the Allegheny mountains southward, is now in full flower, with blossoms varying on different individuals from white to rosy pink.

Zenobia (andromeda) speciosa was in full flower June 25. The beautiful bell-shaped white blossoms produced on last year's branchlets in five to six flowered, drooping clusters from the lower sides of the branchlets, are indeed very attractive. It is somewhat tender here. Pieris (andromeda) Mariana, with campanulate white nodding blossoms, has just passed out of flower, with the exception of a few belated flowers. The cross-leaved heath

HYDRANGEA BRETSCHNEIDERI.

Vaughan's Seed Store,

CHICAGO. NEW YORK.

(Erica tetralix), with dense clusters of delicate blush white blossoms at the ends of the branches, is now in bloom. E. cinerea, a low growing species with small terminal blush white flowers tinged with rose, is now coming in bloom.

Viburnum cassinoides, with its handsome white cymes, was in full bloom on June 19. V. dentatum, with much smaller clusters than the last, came in flower on June 19. The Amoor lilac (Syringa Amurensis) was in full flower June 22, and the Pekin lilac (S. Pekinensis) is just now, June 26, at its best. The Japanese lilac (S. Japonica) will be in bloom in about two days. These lilacs have variously disposed large loose clusters of white flowers.

The yellow locust (Robinia pseudacacia), with its showy drooping white clusters, was in full bloom June 14, and the clammy locust (R. viscosa), with its dense clusters of blush white flowers, came in bloom about June 21. The Spanish broom (Spartium junceum) was in good bloom June 24, and is now very showy. The clear yellow fragrant flowers produced along the glaucous terete branchlets, and which are about seven-eighths of an inch wide and one and a half inches long, are beautiful. This is not quite hardy here and is the first time it has flowered freely. There are still some belated blossoms on the Scotch broom (Cytisus scoparius). Cytisus hirsutus has been in flower since June 24. C. leucanthus var. Schipkaensis, a compact low prostrate shrub with whitish flowers, has been in bloom since June 24.

JOHN DUNBAR.

ANNOUNCEMENT

BUSH HILL PARK, ENFIELD, MIDD'X, JUNE 1909.

Dear Sir:—

RE HUGH LOW & CO., (Dissolved)

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the **Royal Nurseries,** with the greater part of the stock. These nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business.

The staff which is transferred, practically intact, includes such well-known men as my representatives: Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook, Mr. Edward Tack as Orchid specialist and grower, Mr. M. C. Allwood, the enthusiastic Carnation man, Messrs. Moore, Reid and Meades, amongst the roses and fruit trees, and Mr. Phillips in the General Department.

I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and enquiries. Believe me to be always at your service as heretofore.

Obediently yours,
STUART H. LOW.

Please address all communications to **STUART LOW & CO., Bush Hill Park, Enfield, Midd'x.**

GEO. REINBERG, 35 Randolph St., Chicago.

Memphis, Tenn.

Trade this spring has been good on account of the long-protracted cool weather in April and May and well into June, also on account of the Confederate reunion which was one of the red letter days here. Over 200,000 strangers came to the city, but they were not flower buyers, and did not do the florists any good to speak of. Replanting rose houses is the order of the day and some carnations are being lifted and put in their winter quarters. Such a proceeding 10 years ago in this locality would have stamped the florist fit only for the foolish house, but it is the only way to make carnations profitable here. Matter for the fall catalogues is being prepared and hot work it is with the thermometer at 92°.

Otto Buseck severs his connection with the Pearson-McCarthy Co. July 1 and is out with a prospectus soliciting subscriptions to a stock company to be called the Buseck Floral Co. The capital stock will be $25,000, non-assessable, fully paid in. The shares are to be sold in small lots if possible to interest as many different people directly interested in the business. It is proposed to erect seven 27x150 foot greenhouses at a cost of $8,000. How that can be done is not explained in the propectus. A store will be opened on "one of our principal streets and magnificent floral displays will be made under the supervision of Mr. Otto Buseck, whose work in this line has made him famous all over the country." The location has not been decided upon. It is refreshing to read this prospectus and inspires one with hope for the future of the craft in this section of the United States.

Rumors of changes in several of the stores here are heard among the trade. As yet nothing definite has developed.

Otto Wolrath, of the Otto Schill Co., is on a trip to Austria, his native country and will return in August. H.

Chrysanthemum Novelties my specialty.

What Shall I Fill My Empty Houses with Now?

WHAT WILL PAY THE BEST?

Is the cry all over. Use good judgment. I tell you what. ☞ Listen to me. You will never go wrong by devoting a reasonable space to **Araucaria Excelsa, Robusta Compacta** and **Excelsa Glauca, Kentias, Palms,** etc., while they are cheap. They will grow into money for you while you are asleep. Every florist knows **the Araucaria King, GODFREY ASCHMANN, of Philadelphia.** Look at what bargains he offers you in this advertisement:

THE ARAUCARIAS.

We are the largest importers of these so well known beautiful evergreen decorative plants **Araucaria Robusta Compacta, Glauca** and **Excelsa.** ☞ Florists, bear in mind there is no garden lawn or porch, etc., in the summer that is complete without the Araucarias; therefore if you want to make money. ☞ Recommend your customers to buy an Araucaria. Any variety will do to introduce this so valuable plant to your customer friends. ☞ Look! We make you special prices:

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50, $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3-4-5 year old 5-6-7 tiers, 6-in. pots, 20-25 30-35 in. high 75c, $1.00, $1.25, $1.50 each. Smallest size, new importation 2 to 3 years old, 5½ to 6 in. pots, 40c, 50c, 60c and 75c. Can meet all applications.

Araucaria Robusta Compacta and **Excelsa Glauca,** April, 1909 importation, 6-in. pots, 2-3-4 tiers, 3 years old, 12 to 20 in. high, $1 00, $1.25, $1.50 each.

Kentia Forsteriana, made up 8-in. pots one large, 45 to 48 in. high, in center, three smaller ones around, $4.00; single 6-7 in. pots, from 20 to 48 in. high, 75c, $1.00, 1.25, $1.50, $2.00, $2.50 to $3 00 each.

Kentia Belmoreana, 6-in. pots, 25 to 30 in. high, 5 6 good leaves, 3 to 4 years old, 75c, $1.00, $1.25 to $1.50; 4-in. pots, 18 to 20 in. high, 25c to 30c.

Begonia Gloire de Lorraine. Our special strains introduced last Christmas, are well known in the florist trade. We have both the deep pink and the light pink varieties, 4-in. pots, 30c.

Sago Palms or Cycas Revoluta, 5, 6, 7 and 8 in. pots, 5 to 20 leaves to a pot. Price, 10c per leaf.

Ficus Elastica, or Rubbers, 5¼-5½-6 in. pots, 25c, 35c to 50c.

Adiantum Hybridum, large plants, fit for 7-8 in pots, suitable for cutting, 35c, 40c and 50c.

Areca Lutescens, 4-in., made up of three plants, 20c.

Cocos Weddelliana, 3-in., 15c to 18c; 3½-in., 20c to 25c.

Ferns for Dishes, a good assortment, 2½-in., $3.00 per 100.

Asparagus Plumosus, 2½ in., $25.00 per 1000, $3.00 per 100; 3-in. $4.00 per 100.

Cosmos, four best early varieties, made up three plants in a pot, $4.00 per 100.

Asters, Victoria, German, 5 best sorts, $3.00 per 100.

Jerusalem Cherries or Solanum Multiflorum, the new improved varieties, with large berries, 2½-in. pots, $5.00 per 100.

Zinnia Elegans, 2½-in. pots, in bloom, mostly white, valuable for cut flowers, $5.00 per 100.

Cannas, all sorts, and **Scarlet Sage,** 4-in., $5.00 per 100.

Please state if in or out of pots.
All goods must travel at purchaser's risk only. Cash with order, please.

GODFREY ASCHMANN, 1012 W. Ontario St., **Philadelphia, Pa.**
Importer, Wholesale Grower and Shipper of Pot Plants.
Mention the American Florist when writing

GERANIUMS Are a Specialty With Us.

We have an immense stock ready for shipment from 3-in. pots, in a splendid assortment, at $3 00 per 100, $25 00 per 1000. We will send 1000, in 20 good kinds, our selection, for $25.00; good stocky plants from 3-in. pots.

Mrs. Lawrence is an exceptionally fine variety. Our Geranium catalogue describes it as follows: This is without exception, the finest Geranium in its color that we have ever seen; clear, healthy foliage, splendid dwarf, compact habit of growth; wonderfully free in flowering; indispensable as a pot plant, being strongly recommended for winter blooming. Unsurpassed as a bedder. The color is an artistic shade of bright satiny salmon pink, slightly tinged white. We are satisfied its distinct and graceful form will place it in the front rank of its race. From 2-in. pots, $3.00 per 100; 3-in. pots, $4.00 per 100.

R. VINCENT, Jr. & SONS CO., White Marsh, Md.
Mention the American Florist when writing

GERANIUMS..

BYER BROS., **Chambersburg, Pa.**

Pittsburg.

NO GOOD STOCK.

The lack of good stock results in a very quiet market. What carnations still come in are mostly unfit for shipping and until asters come in there is nothing to take their place. Lilies of fine quality are plentiful. American Beauty roses, while in poor form, have good call. Kaiserin and Killarney clean up nicely.

NOTES.

Last week we made mention of the marriage of Louis Biehl but did not know of an accident which befell him the same evening, and unwilling to postpone the ceremony, he was married while propped up in bed with a broken shoulder, the result of his horse running away and spilling him on his way to take flowers to his bride.

The Florists' and Gardeners' Club will hold its annual outing and basket picnic at Keystone Park, a few miles north of the city on the B. & O. There will be several trains both ways during the day and the round trip fare is 40 cents. Every one who goes is sure to have a nice time, so don't miss it.

W. Q. Potter is spending a week in Green county preparatory to going north.

Visitors: Norval Kiger and wife, Marietta, O.

J.

ALTOONA, PA.—W. T. Shields will start a greenhouse on Fourteenth avenue.

WHITE PLAINS, N. Y.—Victor Abel, manager for H. Bowman is away on a vacation.

Foley ventilating apparatus, unexcelled. Send for circulars and estimates. The Foley Mfg. Co., Western and 26th St., Chicago.

IT IS NOT...

what you pay for the advertisement but what the advertisement pays you. It pays to advertise in the **American Florist.**

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

OUR genial Secretary Willis N. Rudd, succeeds fairly well in keeping up with the fashion. He now wears his hair a la pompadour.

"THE cigar that made George Watson famous" is advertised in the New York Florists' Club outing book by a Philadelphia firm.

New York Florists' Club Outing.

The ninth annual outing of the New York Florists' Club took place, as announced, at Duer's Whitestone park on July 1. A large company of "stately dames, faire damsels, gallante gentlemen and joyous cherubes" were carried to the park from the foot of Thirty-first street on the East river greyhound, "Ye good ship Ysabelle." A number arrived by other routes, swelling the crowd to a grand total of 501. Not a sea serpent was seen on the voyage down the sound, and there was no seasickness, so everybody was ready for the elaborate breakfast which Mine Host Duer had prepared. At breakfast there was an appropriate allusion to the late lamented president of the club, E. V. Hallock, while the whole company remained standing. A group photograph was taken on disembarking.

After breakfast the fun began in earnest and was kept up without intermission throughout the remainder of the day. The only drawback was that there was so much good sport going on at the same time in different parts of the park, that it was hard for one person to see it all. The games and races were well managed and came on schedule time. We can recall no local gathering so well attended by all branches of the trade and allied trades as was this outing and Chairman Bunyard and his committee are herewith tendered sincere congratulations.

NOTES.

The most popular innovation of this year was the serving of two meals instead of one as formerly. Racing, playing ball, bowling and dancing are all conducive to hunger and the good dinner served just before the boat started on the homeward trip was just what was needed to put everybody in the best of humor.

There was plenty of good music and an interesting and entertaining personality was the Highland piper in kilts and plaid. In this connection, the dancing of the young folks, clad in similar costume, to the music of the bagpipes, was a real treat.

It was interesting to note that both old and young of both sexes entered thoroughly into the spirit of the games and races; in fact, had it not been for so many gray hairs a casual observer might have supposed that it was a company of young folks.

Dards, Wadley & Smythe, Young & Nugent, Bogart and other leading retailers, sent large delegations from their stores. Myer and Robert Kuhne were there in person.

Madison, N. J., was well represented, as it was bound to be when Charles H. Totty and Robert M. Schultz were present, and there were others.

Ex-president Traendly won the fat men's race as he always does. The only way to beat him will be to get him into a marathon race.

SNAPSHOTS AT THE NEW YORK FLORISTS' CLUB OUTING BY ALEX. J. GUTTMANN.

(1) A Lot of Juveniles. (2) A. H. Langjahr to Right; Mrs. Langjahr to Left. (3) A Well Known Supply Man Who Claims to Be a Bachelor. (4) Another Group. The Tall Man Is a Buyer for a Retail Firm Who Has a Grouch Against Wholesalers. (5) Evidently Going Somewhere.

President Turner, Secretary John Young and Treasurer Rickards of the club were all beaming with joy at the success of the affair.

The Barclay, Vesey and Cortlandt street seedsmen did nobly, Patrick O'Mara being the dean.

F. R. Pierson, Benjamin Hammond and Robt. Simpson were all there and evidently enjoyed it.

SOME OF THE EVENTS.

Gentlemen's bowling, three frames.—The first prize ($10) given by John I. Raynor, was won by Andrew Wilson. The second prize, (Revero Hose value $9) given by E. W. Holt of Cut Flower Exchange, was won by Rassback. The third prize ($5) by W. B. Rickards, was won by Meconi. The fourth prize, (bowling ball), given by N. C. Schreiner, was won by Meisem. The fifth prize given by Louis Schmutz, was won by Fenrich. The sixth prize, given by Louis Schmutz, was won by Kessler.

The baseball game, (Benedicts vs. Bachelors.)—Host Duer's prizes (10 bottles wine and a box of cigars) was won as usual by the bachelors. The players were (Bachelors) Messrs. Manda, Reichers, Wuestman, Krekler, Reigo, Golbert, Cantillon, Tierney and Fred Krekeler, against Messrs. Hildebrandt, Handel, Hornecker, Bogart, Phillips, Reunison, Meyer, Waibel and Allen, with Wm. Kessler, umpire. Score 7 to 0.

The tug of war, Seedsmen vs. Florists; ($10) for the winners. Prize given by Henry & Lee was won by the Florists. W. A. Manda, (anchor); Messrs. Hornecker, Wagenfohr, Weissman, McMullen, Lorenz, J. Manda. Seedsmen, Robt. Clucus, (anchor); Messrs. Breen, Gayner, Low, Gayner, O'Mara, Hughes, Van Sypveld, Adams, Rickards and Wheeler. This was one of the grandest contests of the day.

Ladies' race over 20.—Prizes by P. O'Mara ($10), Alex. Guttman, ($5) and M. A. Bowe, ($5) were won by Agnes Birnie, first; Margery Birnie, second; Emma Golsner, third, and Anna Secker, fourth.

The mile race.—Prizes by Alex. McConnell, ($5); Charles Millang, ($5). Paul Rigo, first; Al. Rigo, second; Chas. Bogert, third. A great race, winner four minutes one second.

Married men's race.—Prizes by Young & Nugent, ($5); Ford Bros., ($5). A. H. Donaldson, first; Phil. Kessler, second; Henry Weissman, third.

Young ladies' race 12 to 16. The Jno. A. Scollay prizes ($10)—Anna Miesen, first; Jeannie Birnie, second; Freda Schenck, third.

Quarter-mile race.—Prizes by Yokohama Nursery Co., ($10). P. H. Kingston, first; S. Gilbert, second; A. W. Sperling, third.

Boy's race, 5 to 8 years.—The Bobbink & Atkins' prizes ($5). Ira Freeberg, and Jos. Walter dead heat; George Walter, third.

Boy's race, 8 to 12.—Prizes by F. H. Traendly ($5). George Harvey, first; Robert Burnett, second; W. Manda, third.

Throwing the ball longest distance.—Prizes by Lager & Hurrell, ($5). Phil. Kessler, first; Iler, second.

At Chicago.

But 15 games more remain to be rolled in the competitive bowling now in progress at the Bensinger alleys that will decide the team that will represent the local Florists' Club at the S. A. F. convention. Of the 10 leading pin getters, Frank Ayres and Victor Bergman were the only ones to improve their standing last Friday evening. John Zech still retains the lead with an average for 12 games of 178 7/12. A. Zech and Geo. Asmus are close up with 172 2/15 and 172 1/12 respectively, and are followed in the order named by V. Bergman, 165 8/15; T. Graff, 156 4/9; W. Wolf, 155 4/6; F. Ayres, 152 2/15; E. Winterson, 149; T. C. Yarnall, 148 12/15; F. Pasternik, 147 14/15. Last week's score follows:

F. Ayres	142	164	158
A. J. Eckert	117	128	141
R. Tuttle	98	109	150
T. C. Yarnall	160	113	116
F. Pasternik	124	168	161
Craig	122	109	146
A. Zech	171	212	126
V. Bergman	177	178	157
J. Zech	162	178	190
O. Goerisch	184	139	137
J. Degnan	160	115	108
G. Asmus	154	164	197

Otto Goerisch won first prize in the handicap bowling match Friday evening. John Zech, at scratch, taking down second money.

The retail florists have fallen in line with the wholesalers and have agreed to close their places of business at noon on July 22, the day set for the Florists' Club picnic.

Anyone wishing to play on either of the baseball teams at the picnic of the Florists' Club should send in their names, with the position they can play, to A. Zech, 51 Wabash avenue.

At Pittsburg.

FLORISTS' PICNIC.

The picnic committee of the Florists' and Gardeners' Club has arranged for the club picnic on Thursday, July 15, at Keystone park, Elfenwild station. There will be music, dancing and refreshments. Trains leave B. & O. R. R. Allegheny depot at 11:10 a. m., 3:25 p. m., 5:20 p. m., 6:15 p. m., returning 4:53 p. m. and 6:48 p. m. Fare, 40 cents round trip. You are requested to notify the committee at once if you will attend and the number with you. Address: The Committee, 222 Oliver avenue, Pittsburg, Pa.

WIZARD BRAND MANURES

TRADE MARK

Dried, screened and packed in bags of 100 lbs. each

HITCHINGS BOILER POINTS

Deep fire channels mean deep waterways, giving a large, direct heating surface. We have turned our Sectional Boiler on its side to show just what we mean. All the "hottest" fire is first caught in the horizontal channels running clear across the boiler, then goes through the side flues, and into the system of triple flues running entire length of the boiler. All this means that the heat is used on water surfaces—not on the chimney.

Hitchings & Company Elizabeth, N. J.

THE
Advance Machine

Pleases our customers or we could not sell 68 machines to one florist; 38, 37, 34, 32, 25, 24, 17, 16 machines to as many other florists. We give them better service than anything they had before. All we need is a trial order to convince you that we have the best machine on the market. Our prices are in plain figures. Free estimates for the asking.

PIERSON U-BAR COMPANY
1 MADISON AVE. NEW YORK

Send for catalog.

Syracuse, N. Y.

June was a busy month here. There were, in addition to the large number of June weddings with their great demand for cut flowers and potted plants, a large amount of funeral work and considerable call for plants for flower beds. One man reported to the police this week that after he had worked far into the night putting plants in his front lawn he arose in the morning to find that all had been stolen.

The local trade took considerable interest in an exhibition of rare ferns under the auspices of the Onondaga historical association at the association's building, the rooms of the lower floor of which are filled with rare species of ferns, coming from all over the world and presented by the local botanical club. Nearly every state in the Union was represented and there were ferns from the Hawaiian islands, New Zealand and Australia. The gold and silver ferns from California attracted considerable attention. Notwithstanding the vast area covered central New York ferns could not be outdone for rarity or beauty, including the walking fern, indigenous to this county. The end of each leaf sprouts into the ground and sends forth a new fern and as many as five continuous growths have been found unbroken.

James Barton, a New York Central railroad passenger conductor, is showing a moss rose unlike the average. He brought a bouquet of the roses from his garden at Parish and they were generally admired for their beauty and rarity. The blossom is perfectly round and solid. It is surrounded by a heavy border of moss resembling to some extent ground pine. Mr. Barton sent specimens to a number of experts and all declared they had never seen a more perfect moss rose nor one of the same sort of development.

Picking lilacs in the city's parks has proved to be an unprofitable business for a number of men. One man with two sprigs which he said he picked for his wife's grave was fined $5. Two other men were similarly dealt with. The police captain's office was fragrant with blossoms for several days, but the captain didn't seem to mind how many flowers were stolen so long as the offenders were arrested. There has been unusual vigilance on the part of special park police and the city patrolmen to protect the park flower beds.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity of your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.

Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler Heating Material or Building line. **Write for price list on Iron Pipe.**

A Few Special Boiler Bargains.

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old; 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.

4-250 horse power **Heibe** water tube boilers with Oliver patent grates; 100 lbs. pressure.

1-125 horse power **Morrison** corrugated furnace, internally fired boiler 125 lbs. pressure.

1-48x21 locomotive fire box boiler. 60 horse power 100 lbs. pressure

24-Horizontal tubular boilers, triple riveted: ½-in. shell ⅝ heads; with Murphy Furnace and stokers on all boilers: also coal and ash handling apparatus for these boilers.

Greenhouse Boilers

A complete line of locomotive, fire box boilers. Kroeschell Greenhouse boilers. Return tubular boilers. Cast Iron Sectional boilers, etc.; some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.

Good for 60 lbs. pressure. Free from patches, bulges or blisters.

Complete with all fittings.

We want to move this boiler quick and quote a special price of..... **$500.**

Boiler Flues! Fitted with special threads and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted; 50 4½-in. tubes. 110 lbs. pressure.

4-72x18 Horizontal tubular boilers. 100 lbs. pressure.

4-72x16 Horizontal tubular boilers, 95 lbs. pressure.

2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.

8-60x16 Horizontal tubular boilers, 100 lbs. pressure.

2-54x16 Horizontal tubular boilers, triple riveted, butt strapped. 125 lbs. pressure.

2-48x14 Horizontal return tubular boilers, butt strapped, double riveted; 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

BOILER TUBES. 20 carloads of 4 in. Boiler tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers Other sizes can be furnished at specially low prices. Write for complete list

5 carloads of Boiler tubes, 2 to 6 inches inclusive also tubes with threaded ends. Get our prices on pipe valves and fittings; we can save you money. Greenhouse fittings at half price.

TRADE FAIR.

Business conditions were fair the past week. Roses can be had in good quantities and find a fair demand, the quality being good. Carnations are getting very poor but have a satisfactory demand. The very hot weather is finishing up the sweet peas, which have had a very good demand this season. Other stock can be had in satisfactory quantities and finds some demand.

NOTES.

The Kentucky Society of Florists will hold its annual picnic at Stower's grove July 22 and a good time is looked for. All the leading stores will close at least a half day. The committee is working hard to make it the banner picnic.

Jacob Schulz had one of the best windows seen for the Shriners' convention. Mr. and Mrs. Schulz will leave July 3 for a long trip to California and other interesting points.

The Florists' bowling club has disbanded for the summer. F. L. S.

EVERETT, MASS.—The board of aldermen has passed an order for the borrowing of $1,500 for the repairing of Glenwood cemetery greenhouses.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Early Forcing Bulbs.

Procrastination, we are told, is the thief of time, and delay in ordering the bulbs for early forcing will mean more than time lost; it will probably mean the loss of good hard cash for the florist who loses the early market for Roman hyacinths, Paper White narcissi and similar stock. The grower who has figured on his wants for the coming season should get his order in for the bulbs at once. He will get a better selection of bulbs than if he waits longer and the earlier they are in and planted the more root they will make before being needed for forcing. As soon as they are received have the flats and soil ready and plant the bulbs. There is not much time for resting them, but they should go into a cool, shady place for a week or two before going into the forcing house. Any ordinarily good light soil will suit them. The Paper White narcissi can be planted fairly thickly, as the bulbs are large, while two inches apart either way is close enough for the hyacinths. Give one good soaking of water before putting the flats under the benches or wherever they are to go and little more will probably be needed before they are wanted for forcing.

Peonies.

Some growers appear to think that when the flowers are cut from peonies the work of the season is over. But if good flowers are looked for another year, especially from the older plants, the growing season is only half over in July. The foliage may have attained almost its full proportions and not much more growth will be apparent, but the roots are actively searching food that the leaves are elaborating and supplying to the forming crowns underground. Anything that can be done, then, in the way of cultivating, mulching or supplying liquid manure will not by any means be wasted. Very often the ground between the rows gets trodden down hard when gathering the flowers, and, if rain has fallen during that time, the July sun bakes the surface hard like bricks. It will be time well spent to go over this and lightly prick it up with a fork, thus letting in the air and insuring the roots the full advantage from any rains that fall. In doing this care is needed not to touch or disturb the roots, but there is little fear of this if ordinary care is taken, as it is not necessary to go very near the stems of the plants.

Gardenias.

The gardenias are fairly reveling in the great heat and no better weather could happen for these heat loving plants. Bright sunshine, tempered with any amount of atmospheric moisture, the roots well fed and the tops sprayed regularly. This is the simple regime for gardenias to enjoy life under. But the moisture must not be allowed to slack or the foliage will be ruined, either by sun or by insects, so keep the hose going under the benches, on the walks and on every dry spot in the house continually. The roots by now have taken a good hold of the soil and are looking for more food than is contained in it. Soot water is an excellent stimulant for these plants, keeping the foliage deep colored and healthy and causing a fine growth. Used alternately with manure water and nitrate of soda it is a fine aid to the gardenia grower. The shoots must be kept regularly pinched and not allowed to produce flower buds. By this means and the stimulating heat and moisture young stock from cuttings will soon make splendid bushes, while old stock cut back will be rejuvenated and give plenty of flowers later.

Mulching Outdoor Flowers.

Much of the time spent in watering outdoor stock at this time of year may be saved by simply placing a mulch of semi-decayed manure over the surface soil. A weekly watering of stock protected by such a mulch will do more good and produce better results than a daily watering without it. It keeps the sun from the surface and prevents rapid evaporation and loss of moisture, while the moisture rising from it, both by night and day, is a great help to the plants, keeping them healthy and clean. Only a few inches of light material is needed. Heavy dressings of rich and strong manure do more harm than good. Once get the soil thoroughly

moist under a mulch of the above description and the plants will thrive no matter how hot the weather.

Asparagus Sprengeri.

Cut flower growers always have a call for this useful green and as there are plenty of other greens now it is a good time to go over the benches and clean the plants. Careless cutting of the sprays often leads to stubby shoots being left and these make a thick mass in the center of the plant that is useless for cutting or for any other purpose. These should now be cut clean out as well as any older stems that are damaged and unfit for sale. A top dressing of rich soil is a great help after the cleaning has been done, but first make sure that the bench is wet right to the bottom or it will be difficult to get water down to it afterwards. This asparagus is a thirsty subject when well established and rooting freely. Besides water a thorough soaking of liquid manure every week is helpful. Be careful in applying this not to let any be spilled on the foliage or it will burn when the sun strikes it and make the sprays unfit for sale. A bench should be planted now with young seedling stock, about a foot between the rows being a good distance. Shade for a few days and spray freely, but avoid overwatering the roots until they are again running freely in the new soil.

Young Stock Outdoors.

Violets, forgetmenots, pansies, wallflowers and all such stock should not be neglected now. Cultivation between the rows of violets and the removal of all side shoots as they form is the chief work among them. Forgetmenots must be made over where any have missed and a good watering given if they are dry. Spraying regularly and a light shade during the hottest part of the day is a great help to these plants and helps to keeps mildew in check. The wallflowers will stand plenty of sun and should be in the most open and airy position at command. Young plants of campanulas should be pricked out and watered regularly until they have taken hold while it is not too late to make another sowing of these and Alyssum saxatile, one of the best of yellow flowers for early spring cutting. Seedling pyrethrums should be planted out now in a position where they can be protected during winter, a plant protector, if it can be spared, or a warm border. Many other herbaceous and biennial subjects may be sown now, delphiniums, Canterbury bells, gaillardias and doronicums, while cuttings may be inserted of any shrubby stock such as Hydrangea paniculata, weigelas and many others. Half ripened shoots about four inches long with the lower leaves removed and the shoots cut straight across are the best cuttings and these should be inserted in frames where they can be kept moist and lightly shaded until roots have formed. Any time that can be spared for the herbaceous border may be spent in removing flower seed pods, mulching any plants that need it and supporting flowering plants and none of this will be wasted or unproductive.

AT THE WASHINGTON AUTOMOBILE PARADE JULY 5

AT THE WASHINGTON AUTOMOBILE PARADE JULY 5.

Winner of $100 First Prize by Gude Bros.

THE RETAIL TRADE

O. J. FRIEDMAN, of Chicago, has pushed the steamer idea a little further by placing one in water in his window. Some magnificent Japanese irises were also shown in his window during the early part of the present week.

Basket of Single Dahlias.

SEE SUPPLEMENT WITH THIS ISSUE.

The double dahlia though a fine garden flower, is too heavy in appearance for much of the decorative work which a retailer is called upon to do. Skilful men, it is true, use it with excellent effect and turn out fine work, but the double fancy or show forms have a lumpy effect in the hands of unskilful men. This charge cannot be brought against the single forms. Borne on long, slender stems and of bright and effective color, they are very beautiful in all classes of decorative work and in none are they better than in baskets. Dahlia foliage is not always attractive, but a little of the fresh green used with the flowers is an aid, especially if combined with a few buds and half opened flowers.

The colors of the single dahlias have been greatly improved of late years and among them are delightful soft tints that harmonize well with any other flowers, also deep scarlet and almost black forms that are striking and effective alone. Then there are yellows with shadings of red or purple and many tints almost indescribable. The old Paragon forms, too, with dark,

AT THE WASHINGTON AUTOMOBILE PARADE, JULY 5.
Z. D. Blackistone's Special Delivery Car.

nearly black lines, running over a lighter background are good for this class of work. The single dahlia may be described as a thirsty subject and must be kept in water up to the last minute before being used, while, if possible, some wet moss should be used around the stems to keep them fresh as long as possible.

Prize Automobiles at Washington.

The procession of automobiles at the Fourth of July parade at Washington, D. C., was a gorgeous spectacle, some 200 cars, all more or less profusely decorated, taking part. Gude Bros. were very successful, as out of four machines decorated by this famous firm three received first prizes. Two of these were silver cups valued at $100 each, the other a silver loving cup for the "Old Glory" prize. We reproduce two of the winning cars and the other two were equally beautiful, all so good that we found great difficulty in deciding between them. This the judges at the parade also found a difficult task, needing "long, careful and serious deliberation," according to the Washington Post. But it is due Gude Bros. to say that the notes of the judges proved to agree in every particular. We congratulate the firm on its splendid success, as well as on the artistic ability shown in the work of decorating the cars. Wm. F. Gude of this firm read the declaration of independence on this occasion.

Z. D. Blackistone was also very successful, winning the $500 sweepstake prize for the elegant car shown as drawn by a swan. Several other splendid cars were decorated by this noted florist and further particulars are given below of these and other successful exhibitors. So good in fact were many of these that we can only reiterate our regret that we have not space to figure any more. The Blackistone cars were elegant in the extreme and helped to round out a magnificent spectacle that will long be remembered in the capital city. Congratulations, Mr. Blackistone.

The Washington Automobile Parade.

GRAND INDEPENDENCE DAY SPECTACLE.

Never before have the citizens of Washington showed such great interest in patriotic exercises as on July 5 of this year, on which day the floral auto parade took place. Almost the entire city seemed to be crowded into Pennsylvania avenue to view the floral bedecked cars, which were transformed into floats, motor boats, steam launches, yachts, and many other appropriate conveyances. The idea was born in the columns of the Washington Post, and met with such great success, that no doubt it will hereafter become an annual occurrence. Although somewhat handicapped by the shortage of natural flowers the florists managed to pull through by combining the artificial with the real and the spectators no doubt had a difficult time distinguishing one from the other. The parade started in front of the Post building, making a tour around the capitol, back to White House, then to the speedway where the judges were seated.

Wm. F. Matteson captured the sweepstake prize, a $300 cup; the car was transformed into a gondola, drawn by a swan made of crumpled white satin; the idea originated from an old legend, that in days gone by, this sort of craft was led down the Rhine by a swan, according to the opera Lohengrin. A child held the reins of white ribbon which guided the swan on its journey. The car was decorated by Z. D. Blackistone. Another sweepstake prize of a $200 diamond ring was won by Mrs. Matteson. This car was of the electric style and was transformed into a large basket filled with pink roses. A wistaria arbor, captured second prize. In class B, electrics, Z. D. Blackistone won first prize, a $100 silver cup, for Mrs. Lester D. Moore. This machine was made to represent a shell effect in pink and white; the third prize was awarded to Hahn Shoe Co., for its floral airship.

A blue ribbon was awarded to the decorator of the cars winning the sweepstakes, which Z. D. Blackistone had the honor of winning. In class A, Gude Bros. won the first prize for Arthur D. Moses, with canopied car decorated in pink roses, the owner received a $100 silver loving cup. Third prize was won by Geo. C. Shaffer for John A. Lutz. The Defender a floral effect achieved after much labor and

AT THE WASHINGTON AUTOMOBILE PARADE, JULY 5.
Shell Car of Pink and White, Winner of Loving Cup, Value $100, By Z. D. Blackistone.

expense and one almost impossible to accomplish with an automobile, was a yacht equipped with real canvas sails towering high in the air; it was built along the identical lines of a vessel built for water sailing; $25 in gold was awarded the owner. The Merrimac, another creation of Geo. C. Shaffer, a somber, ominous looking craft equipped with cannon, and with fire shooting from her smokestack, together with her decorations of red roses, and morning glory, succeeded in capturing first prize, $100 cash, for most unique entry in the parade.

In class B, the second prize was won by Shaffer, for Mrs. Spence. This auto was decorated with red white and blue, and a parasol was arranged over the lady at the wheel. In the front of the car was arranged a shield of immortelles which was surmounted by a baldheaded eagle, the prize value $50. Another second prize of $15 was awarded for motorcycle decoration by Shaffer. In the commercial class Gude Bros. captured first prize, $100 silver cup, for delivery wagon trimmed in white and green cloth and natural roses. This firm also secured first prize, $100 loving cup, for the most beautiful display of the American flag. This was known as the Old Glory prize.

Marche & Co. captured $5 in gold for decorations of miniature auto operated by a boy about 12 years of age. The artistic taste was displayed however on the Taxicab Co.'s car which received second prize. This car was apparently drawn by a flock of doves, which were so arranged as to protrude far in advance of the car. Aucubas, red and white hollyhocks, Asparagus Sprengeri and ribbon grass were used extensively, and the monogram "T. T. Co." in red immortelle letters, adorned the top of the car.

Many other beautifully decorated autos were in the parade, one of them a patriotic setting, consisting of Liberty bell with its huge crack, Columbia holding the American flag and protecting the bell, and Second Colonial soldiers operating the car completed this float; no prize was issued for certain reasons, known best to the judges. An airship modeled after Zeppelin won second prize in the grotesque class.

Sweepstake Winner of $300 Loving Cup by Z. D. Blackistone.

THE CARNATION.

WINSOR is still the best flower in its color though Winona is quite its equal, if not its superior, as a producer. There is room for both.

Around the Carnation Houses.

Where only field stock is grown and where the flowers are not cared for much after Decoration day the carnation houses for the past few weeks have not been particularly interesting places to visit. But the Fourth of July fireworks are the signal that the short resting season will soon be over and the carnation men wake up to the fact that another season is upon them. Throwing out the old plants and filling the benches will be the order of the day now. It is well to be sure that all benches are in good shape and any repairs necessary should be carried out immediately before bringing in the new soil. With concrete benches this does not apply, but carnation growers have not, as far as our experience shows, gone in so heavily for concrete as the rose men.

The depth of soil on the carnation benches is a debatable point. Possibly the majority of growers would give five inches as the best depth, and this certainly has custom in its favor. During hot dry weather the full five inches is an advantage rather than not, but there comes a time in winter, say in dull or wet weather, when the benches have been well watered, that this depth of soil takes a very long time to dry out. Now every carnation grower, every grower of any experience, in fact, in any line, knows that it is not good for the plants to be in a moist condition for a long time. The more rapidly in reason the benches dry out and the oftener they have to be watered the better. Each watering carries down with it a certain amount of fresh air to the roots, and of this they are always in need. Plants with their roots constantly in close wet soil cannot thrive for the very reason that air does not reach them in sufficient quantity. This certainly makes a thinner layer of soil desirable, and although we do not wish to be dogmatic about it, we are convinced that from 3½ to four inches is ample if the plants are well fed when they need it.

Many growers have their favorite varieties and stick to them year by year on the principle that when a good thing is found it is best to hang on to it. And so it is until a better one can be found, but new kinds should be tried with a view to finding out which are real improvements and which are not. Among the novelties in reds this year probably no other will be so generally planted as O. P. Bassett. Although new to the trade generally, this has been so well tried out at the raisers' place and has made such a name for itself on the Chicago and other markets that its planting is not looked on as a gamble, as so frequently happens with novelties. It has already a secured position and will be very largely grown. Then we have those excellent stand-bys Victory and Beacon. Some growers prefer one, some the other. Beacon is a stronger grower than Victory and needs more room, but is a most remarkable producer. Victory also is an excellent producer and has, we think, slightly the advantage over Beacon in color. In whites White Enchantress is a splendid variety and it is hard to see how it can be improved upon. White Perfection is a magnificent show carnation but possibly not quite as free as the last named. Mrs. J. C. Vaughan is well spoken of as a free bloomer and very constant all through the season. White Lawson is losing favor and although this and Boston Market will still be grown there appears to be no doubt that their race as first class varieties is run. In pinks Enchantress still holds sway; it is unassailable in its class. Mrs. Lawson is still grown largely and many growers have still great faith in it as a good winter bloomer and shipper. Aristocrat, notwithstanding its past popularity, still gains ground. It is a grand carnation and will be doubtless grown for many years. Those two beautiful pinks, Winsor and Winona, shall close our list, a list not intended to be complete but certainly containing the cream of well tried sorts. Winona is a lovely color and a fine producer, while the flowers of Winsor are a little larger; both are grand varieties that no up-to-date carnation man will think of leaving out of his list of pinks.

Stopping Carnations.

ED. AMERICAN FLORIST:—

How many shoots would you leave on a carnation plant before finishing stopping? When is the latest you would advise stopping or topping shoots and how many leaves and joints up would you leave as last topping to shoots? I am about to plant on bench from bench inside. Should I top at once again, or wait till plants are rooted? J. B.

It is impossible to have too many shoots to a carnation plant. Go on stopping until about two months before the flowers are needed at their best. It is better not to top at the same time the roots are being disturbed and the plants should not all be stopped at the same time. G.

THE ROSE.

LITTLE and often is the way to water young stock now.

CROWDED growths and heavy syringing now means black spot on American Beauty foliage later.

MY MARYLAND, now that the plants are not being cut back for propagating, is producing splendid flowers in great quantity.

Care of the Young Stock.

If the planting has been carried out as described in our last notes the next step will be to keep the weeds in check; also to have the plants tied as soon as possible. The young stock can then be readily cultivated. The best method of tying is to construct a frame at each end of the bench or beds, of 1-inch pipe; the pipe used need not be new, as pieces with small splits or dents can be used for this. At the same time new pipe will make a much better job and will have a neater appearance. The uprights can be placed a foot in the ground opposite or on a line with the outside rows. This will set them back out of the way. Place an elbow on the ends of the uprights and connect a cross pipe to these. This cross bar should be about 30 inches from the surface of the beds and four feet six inch galvanized stakes should be used. This will give one a chance to tie and work around the plants with ease.

For the running wires, use No. 18 galvanized. Stretch them directly over the rows, giving the ends several turns around the cross pipe on the frames. Draw the wires quite tight and support them about every 50 feet with a light wooden frame constructed similar to the pipe frames and with the cross pieces, the same height. If there are any posts in the beds a cross bar lashed firmly to these will be sufficient. After stretching the wires they can be fastened to the cross pieces, using small staples. These will keep the wires the same distance apart the full length of the bed. Now we are ready to stake and tie; if there are four rows on the bench stake the two center ones first, placing the stakes about one and one-half inches to one side of the plant stem to avoid bruising the strong roots. In fastening the stakes to the running wires make two wraps of the twine around the wire, then around the stake, then one turn around the wire and tie in front of the stake. This will keep the stakes from slipping out of place and, with a little practice, the tie can be made rapidly. Now tie the two center rows and train the heaviest wood in the plant nearest the stake. Tie them so they will look to be growing naturally and not squeezed right up to the stakes.

AMERICAN BEAUTY.

In staking American Beauty a little different method should be followed. Many people prefer the single stake, owing perhaps to the extra cost of double staking the plants. But we think the extra cost of using two stakes to each plant is very much overcome by the results obtained. We all know that American Beauty is most susceptible to black spot, and in order to allow the air to circulate freely through the foliage the plants should not be tied too closely. By placing a stake on each side of the plants about three inches from the center they can be tied to a much better advantage and a 6-foot stake, supported three feet from the ground and again at the top of the stake, makes an excellent trellis for this tall growing variety.

We find when it comes to weeding that it is far better to let the first crop of weeds get about three inches high; they can then be easily pulled and, what is better, there will be very few weeds show up after this first crop, as there will be very few broken off. After weeding, cultivate around each plant where the saucer has been left for watering first, as the soil has been tramped around the plants firmly and this should be loosened up on the surface. Before putting the comparatively loose soil in and around them the whole bed should be cultivated and leveled nicely. The plants from now on will take a general watering, care being taken not to give them any more than will last them safely until the next day, as it seems to suit the young stock to be watered frequently rather than to water them so that they will go several days without water. By syringing twice a day during bright and extremely hot weather and by going over the dry spots first the plants will be kept moving properly and when they are making wood rapidly and of good color the grower may know they are getting the proper amount of water. If the foliage should become streaked or weak looking this is usually a sign of overwatering.

WATERING.

Avoid extreme dryness of the soil at any time, especially with own-root stock, as this frequently is the cause of eel worm, and once the roots are infected with this pest causing club root there is nothing that we know of that can save the plant. The plants should be syringed with considerable force at all times in order to keep red spider in check, and if there are any signs of spider on any of the old foliage the leaves should be removed. Dust a little sulphur or grape dust over the plants about once a week, as it is easier to prevent mildew than to cure it. Air slaked lime dusted around under the tables and in the walks will have a tendency to keep the air pure and sweet and will be of great assistance in warding off black spot. If one intends to carry over old stock for another season it is best to give these plants a rest. This can be best accomplished by reducing the

ROSE SILVER MOON ON PLANTS IN THEIR THIRD YEAR.

amount of water very gradually and keeping up the syringing. After the wood ripens up nicely, which should require from three to four weeks, the plants should be pruned carefully and either tied down or left standing. There is not much difference in the resulting growth, but by bending them over they naturally will have much more headroom and for this reason they are usually handled this way. Further directions for handling the old plants will follow in due season, but for a good seasonable start they should have their resting period between July 15 and August 15, earlier than this if one desires a crop of flowers for the latter part of October.

E.

Two New Climbing Roses.

Peter Henderson & Co., New York, write as follows, also sending the photographs from which the accompanying illustrations were prepared: "We have pleasure in sending you under separate cover photos of our new climbing roses, Dr. W. Van Fleet and Silver Moon. These varieties will, we believe, mark an epoch in hardy climbing roses. The first is now in its ninth year and has stood the winters at Little Silver, N. J., without injury. The second is in its fourth year and has also stood the winters there perfectly.

"Dr. W. Van Fleet (Souv. de Pres. Carnot x Rosa Wichuraiana).—The open flowers run four inches and over in diameter, center built high, petals beautifully undulated and cupped. The color is a remarkably delicate shade of flesh pink on the outer surface, deepening to rosy flesh in the center. Flowers full and double, buds pointed, stems 12 to 18 inches and fine for cutting, delicate perfume. The foliage is a peculiar shade of bronze green, large and glossy; spines a bright bronze red; a vigorous grower and immune from mildew.

"Silver Moon Rosa Wichuraiana x Rosa Sinica 'Cherokee Rose.'—This is a most interesting cross. The flowers run four and one-half inches and over in diameter, clear silvery white in color, petals of great substance and beautifully cupped. The center is filled with bright yellow stamens, a very attractive feature. It is very floriferous, the plants literally covering themselves with the great clematis-like flowers. They are borne on strong stems, 12 to 18 inches long, and are delicately fragrant. The foliage is large and abundant, a pleasing shade of bronze-green, and glossy; vigorous grower and immune from mildew.

"Both these roses were awarded a silver medal at the rose show in New York, 1908, by the Horticultural Society of New York, and were pronounced the greatest novelties in roses by all who saw them."

WILKESBARRE, PA.—Edward Salyer has leased for a term of years the Harvey greenhouses at Plains, consisting of about 10,000 square feet of glass, where he expects to conduct a general florists' business, giving special attention to chrysanthemums and violets. His business address will remain Wilkesbarre, Pa., where he has had his home the past dozen years.

CHRYSANTHEMUMS

FINISH up all planting without delay.

VIRGINIA POEHLMANN will be very largely grown this year for early work.

DO not allow the plants for growing in pots to become too hard before giving a shift.

LOOK out for the first break on the early planted stock. Pinch out the bud and upper shoot.

Hints on Culture.

Where everything has gone right, where the plants have been kept growing freely up to the time of planting and carefully set out, they will go right ahead with very little trouble. But occasionally the young stock will have been neglected, owing possibly to having been kept too long in the pots or in a poor light and these will have to be watched and treated carefully until they have obtained a good hold of the new soil. There is just this difference between good and poor stock. One of the results of ill treatment will be noted in the appearance in the points of the shoots of green or black fly, these insects always selecting sickly or unhealthy plants for their attention in preference to vigorous, healthy stock.

As long as the weather keeps bright spraying with clear cold water should keep these insects in check, but if they gain ground then spray with some preparation of nicotine used moderately strong. It is also a good plan, especially if the weather is damp or dull, to sprinkle a little good tobacco powder over the tops of the plants whether insects are present or not. It will make the foliage distasteful to them and prevent attacks, as well as killing the young ones. But see that the powder used is good.

Supporting or tying the plants in some way must be early attended to. A wire to each row close to the soil and another at about four or five feet above, according to the height of house and variety, will form a good support for strings. Before placing the strings wooden strips should be fastened every 10 feet or so across the benches. In concrete benches a staple is often cast into the upper edge to take these, while on wooden benches they are either nailed down for each crop or fastened with wires according to convenience. The upper wires are supported by suspending wires from the rafters at every 10 feet. The string should be cut the right lengths and fastened to the top wire first, then the bottom, and when a little practice has been had the work can be very rapidly done. The young plants will then be tied at the bottom with raffia, twine or wire ties, whichever are used. The soft wire ties are certainly the easiest to handle. They can be slipped on in a second with one hand and when it comes to cutting the flowers it is only necessary to draw the stem away from the string and the wire falls off.

Stirring the surface soil regularly has the double effect of keeping down weeds and assisting the growth of the plants. With a small, fine-toothed rake go over the beds every few days and in this way the weeds will never have a start, thus keeping the soil between the plants clean until the latter get tall enough to shade the soil so that weeds have no chance to grow. Watering needs considerable care, on the one hand to see that the plants have sufficient to keep going, on the other that the soil is not saturated so that root action is checked. Avoid, at any rate for a time, wetting the whole of the soil and be careful in spraying not to have a lot of water falling on the surface. The careful use of the hose is one of the first things to learn, for a man who is careless in this respect can make the greenhouse an unpleasant place to be in.

COMMERCIAL.

ROSES DR. W. VAN FLEET AND MAY QUEEN GROWING TOGETHER.

OELWEIN, MICH.—Chas. Hancock will erect a greenhouse, 30x60 feet, at his place at South Oelwein.

BOSTON, MASS.—W. W. Rawson & Co. have had an interesting display in the windows of Thos. F. Galvin, Tremont street, for some time. President Taft's home at Beverly is reproduced in miniature, the trees and shrubs of the garden as well as the house itself being faithfully imitated and it should prove a valuable advertisement for this well-known firm.

The Modern Sweet Pea.—IV.

The sweet pea flowering season is upon us here in California. On May 17 I started for the Morse ranches at Gilroy, once more to revel in the extensive trials and the sweet pea "workshop" where the new crossings are made and planted almost ad libitum. The trial grounds are at the Ray ranch just beyond Gilroy, and the "workshop" is at the Martin ranch just this side of Gilroy. I spent three days on that visit and took notes on 400 trial rows, leaving another 100, of later importation, till my visit in June. At the Martin ranch the new seedlings from crossings made there cover 12 to 15 acres. And here is where the professional sweet pea man feasts his eye till he can stand it no longer. I wish that a thousand papers that reach the American public might copy what I want to say about this visit and I wish the editor would drop his blue pencil in the wastebasket and forget where it is when he receives this article. I do not see how any other flower in all the world can make such a showing as the new sweet pea now does at Gilroy.

The art of crossing is now so thoroughly mastered there, and the opportunity so unlimited that this is now the place to go and see the most advanced work on this flower. No amount of space is begrudged for planting all the stock that has any new crossed blood in it. And the expense of doing this work is almost a free gift, for in the close ruling of market prices for seed no allowance is made for this special work. A sweet pea expert has been doing this work for 15 years, until now that the Spencer type is coming in his "workshop" is literally a paradisal profusion of seedling stock and a quality and variety of color representing the very top notch of advance in this flower.

ENGLISH VARIETIES.

The first point of interest is the novelties recently imported from England. These consist of the Unwin class and the Spencer, that have been named in England, with a few that I call large Grandifloras. The Unwin type is free from the hood and approximates to the Spencer form. I noted A. J. Cook in this class, a pale lavender; also Nora Unwin, white; Gladys Unwin, like Prima Donna in color; Pink, Pearl, a little deeper rose pink; Phyllis Unwin, medium bright rose; Lorna Doone, a pale Countess of Spencer Unwin; Millie Maslin, rose scarlet; Prince of Asturias, dark maroon, a little reddish; Chrissie Unwin, a remarkably bright cerise, and Mrs. Alfred Watkins, pale.

Of the Spencers I counted, in both the trial grounds and the "workshop," 57. There are very few duplicates among them. Florence Morse Spencer is the English Mrs. Hardcastle Sykes. And Paradise and Enchantress are so nearly like Countess Spencer as to be hardly distinguishable. Countess Spencer and Mrs. Routzahn each head a separate class of Spencers, that, in their picotee edge and border, shade more or less deeply. The Countess Spencer class have a white ground or throat, while the Routzahn class have a primrose, straw or cream ground or throat. I listed 10 or more of these that run from a soft edge or border to a deeper and brighter edge or border. Taking the white grounds they run from the broader border of Countess

Rose Silver Moon.
Rather More Than One-Third Natural Size.

Spencer to the delicate edge of Princess Victoria, which the Princess herself requested might be named for her. But some of the newest ones run much deeper in color than the original Countess Spencer. And Audrey Crier has a softer picotee edge than Princess Victoria.

SPENCER SELFS.

Leaving these I ought to note the Spencer selfs. Almost everything bright and beautiful now come in Spencer form, like Queen Alexandra and King Edward the VII, which were Eckford's supposed scarlets. Coccinea is one and there is another lighter shade of cerise also. Of the orange Spencers, Helen Lewis has been recovered and Henry Eckford also has come beautifully to this form. Two lighter shades of Henry Eckford have come in, one of which has both wings and standard of bright orange cream. Of the very dark varieties Othello takes immense Spencer form, and Black Knight also comes a Spencer. Another immense dark one is Blackbird, a giant Grandiflora. And Midnight is a black maroon that outclasses all in darkness, but is not a Spencer. Senator takes large Spencer form. Of pink Spencers there is a soft salmon pink, a very light buff pink, a soft rose pink, a soft rose salmon pink, and a royal rose shade showing salmon and primrose. Of lavender Spencers there is a Balfour Spencer, a Dorothy Tennant Spencer, a Fascination Spencer and an Emily Eckford Spencer. Of primrose and cream the former has come into fine Spencer form and Queen Victoria cream and Lottie Hutchins, cream and soft rose flaked, both have come into Spencer form.

Rose Dr. W. Van Fleet.
Rather More Than One-Third Natural Size.

Both black and white seeded whites have taken the Spencer form. And of the striped sorts, Aurora is a giant Spencer, Ramona also, and America has come to it, and the rose stripes such as Gaiety are now Spencers. Two very interesting developments are a godetia sweet pea, a polypetaled form almost like a rose, and another new seedling that is a great advance towards scarlet, more scarlet than Scarlet Gem. By working in orange and cerise on the old brightest reds a splendid brilliancy of color is showing up. Let me call attention to a few sorts that I specially noticed. Mrs. Geo. Lewis is a good white with lots of substance and about the size of Blanche Burpee. Mrs. Collier is a fine grandiflora primrose cream. Agnes Eckford is a soft pink corresponding to Dorothy Eckford in size. Bolton's Pink is a bold light salmon pink and does not hood. Jessie Cuthbertson is a striking rose stripe. Helen Pierce is to anyone not familiar with it very interesting in marbled blue on white. Lord Nelson is a beautiful dark blue. Mrs. C. W. Breadmore and Evelyn Hemus are grand picotee edge sorts.

W. T. HUTCHINS.

The Lath House.

Surely plant growers as a rule do not comprehend the value, one might almost say the absolute necessity, of a lath house. Where there is plenty of ground it should be made as large as possible for from all points it is one of the most useful structures on any place. In spring plants that are not sufficiently hardy to stand frost may be placed in it to harden off before being planted out. In winter even bulb flats may be placed in it and covered for a few days before going under glass. But it is during the heat of summer when the sun outside is too much for the ordinary plant that the lath house is so useful. A batch of araucarias purchased early in the season and placed in such a structure will grow into money during the summer and make splendid stock for Christmas sales. Japanese maples, conifers and similar semi-hardy stock can be kept there practically all the year round and

there is really no single month in the whole year when the plant grower cannot use the lath house for some purpose or another. Not much money need be spent upon it. Make it just high enough to walk in without stooping and have doors at every 10 feet or so throughout. Make it as big as the pocket book will stand, for it will be all useful. COMMERCIAL.

Lawn Decoration.

A paper read by Edwin Lonsdale before the Florists' Club of Philadelphia, July 6.

When your committee invited your humble servant by letter to write something about the latest in outdoor flower bedding, I hesitated so long before replying that the chairman of the committee, Robert Kift, paid a personal visit, and his pleading was so effective and irresistible that all I can now say is "Here I am."

A WIDE FIELD.

Lawn adornment opens up a very wide field, altogether too wide to be considered at all satisfactorily in the brief space that may be allotted to its consideration this evening so that the best that can be done with so important a subject under existing conditions is to give same a "touch and go" treatment.

The first thing that naturally suggests itself when considering the embellishments to a lawn is to produce an inviting and restful effect, and the very best material to make use of is shrubbery and shade trees judiciously planted. Of equal importance is a seat here and there. Let these be as informal or as rustic, yet as comfortable for the purpose intended as it is possible to have them. Let shrubs, both the deciduous flowering and the ornamental evergreens, be disposed as nearly with natural effects as it is possible to do. Many of the strong growing grasses add a grace to any plantation that nothing else can give.

REGULAR DOTS NOT WANTED.

Do not dot plants on a lawn unless same is made to appear to have naturally escaped from a nearby group. I once saw a lawn planted with such regularity that in the distance the bushes had the appearance of cocks of hay. Let the shrubs occupy spaces on the extreme outsides of the lawn, avoiding straight lines in the planting in all cases, allowing sufficient space between each plant for the future development, and, for the first few years after planting, what may seem too much room may be occupied with such flowering annuals as may suggest themselves to those who have the work in charge, and the more lasting hardy perennials could be interspersed between to advantage. But great care must be exercised in the association of the vari-colored annuals and the perennial flowering plants to avoid clashes in coloring.

CONTRASTS OF COLOR.

It is far easier to avoid color clashes in the tender bedding plant combinations than it is with the hardy outdoor flowering plants, although too often we do see the scarlet zonal pelargoniums and the majenta-pink colored varieties of the same, in too close proximity to be harmonious. Vases judiciously placed, which means never in the center of a plot or lawn, and where water is of easy access so as to give in abundance when requisite, which is generally once a day and frequently twice, are oftentimes very effective, especially in this case on the edge of a pond or lake, but by all means refrain from planting purple petunias in the same vase with scarlet geraniums or any other colors with which they may produce discord.

Many of my hearers will remember that strong paper read at a convention in the early history of the Society of American Florists, held in Buffalo, N. Y., in which the essayist advocated the omission of all flowering plants from lawns and pleasure grounds, to have nothing but grass, trees and shrubbery, and you will also remember what an uproar went up all over the country in vigorous protest. And only last summer a lady visitor at Girard College, on entering the lodge gate, stood, and in no unmistakable terms declared, "What a pity to cut up the lawn and plant thereon those horrid geraniums," and so it goes. It is impossible to please everyone. The cactus bed which we have in Girard College grounds attracts more attention than all the croton, geranium or miscellaneous beds combined.

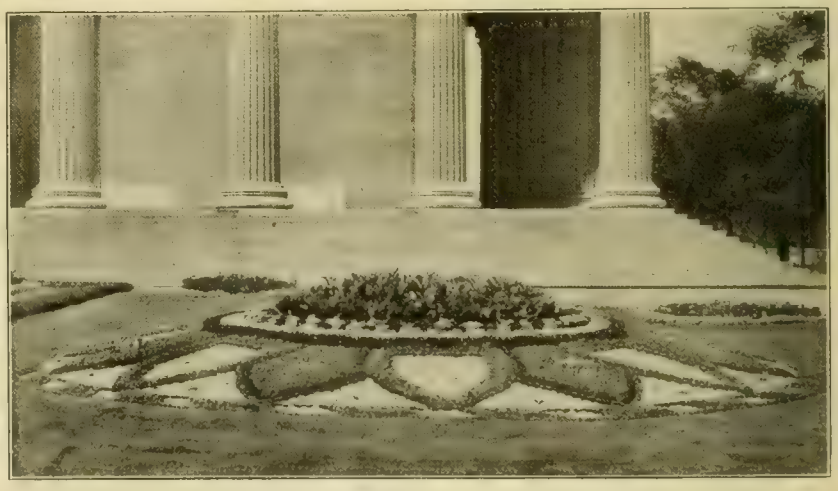
The president of Girard College only a short time ago said with much apparent gratification that the "front" never looked better. While the too plentiful use of the scarlet geranium (zonal pelargonium) may not be considered in the very best of taste, as we have it this year, I believe its very brilliancy in coloring in the past has attracted many persons' attention to gardening, and when once a person's interest has become aroused in gardening, the rest is easy. The end has justified the means. It has acted as a means to an end, and has acted as a primer, as it were, or rather the kinder-garten to aid floriculture. In a public, as well as any other garden, the geranium appeals to the popular fancy, and for that purpose I believe it will hold its own for a very long time to come.

Personally, I have no use for the pink varieties, for the most part, because they do not harmonize with the brighter reds or scarlets. At one time I did not like the salmon tinted varieties of geranium, but now I welcome them, because they harmonize with the brighter reds and scarlets. There is no color clash with these brighter colors, provided the blue combination is kept in due subjection.

PIN OAKS ON THE LAWN.

It should be understood in this connection that the landscape gardener has completed his work, though one suggestion I will venture to propose, and that is, when space admits, I would advise that a triangular tree plantation be made not too far away from the residence, and that these trees be the pin oak (Quercus palustris) where said trees render a good account of themselves or, when some better tree for a given locality suggests itself, let the same be planted at least 16 feet apart, in triangular form. Those of my hearers who contemplate such a planting will be surprised how amenable they will be to the proscribed landscape effects, and what is of equal importance, after they have had a few years' growth they may be brought into requisition as hammock supports. Three trees properly disposed will support, or rather furnish supports for three hammocks, which will undoubtedly furnish another point in the restful effect so much desired in all lawn adornments.

The planting of flower and foliage beds in lawn adornment is considered to be worthy of our best thoughts; especially does this apply in public and semi-public gardens connected with our popular institutions. In the Girard College grounds, with which yours truly is connected, the idea is to make as much display with the plants we have on hand as is possible and we proceed as follows: In the spring time we plant pansies, forgetmenots, Alyssum saxatile and Arabis alpina between and associated with tulips, hyacinths, etc., which had been planted during the late October and early in the November previous. This combination, for spring flowering, is very effective. Wallflowers are also found to make good for spring bedding when planted as above indicated between bulbs of last fall's planting, or for in-



CARPET BEDDING AT GIRARD COLLEGE, PHILADELPHIA.

dependent planting in spaces unoccupied. Wallflowers sown late in June or early in July, if taken care of as to transplanting once or twice, will make effective planting for spring work.

For summer blooming there is nothing superior to geraniums, and when we desire foliage plants nothing is comparable to crotons. The surprise

SUBTROPICAL BED AT LINCOLN PARK, CHICAGO.

is, judging from how well these showy leaved plants cover themselves with glory in and around Philadelphia, that more of them are not used elsewhere. The canna, as a large flowering plant for distant effect, is most satisfactory, and as edging plants nothing is superior to Abutilon Savitzi, which gives a white line more effectively than any other plant that I know. Echeveria and alternanthera are much used where formal designs are desired, but these are being used less and less as truly artistic instincts are developed, and the time is not far distant when the formal flower bed will be a thing of the past.

National Sweet Pea Society of America.

At the opening meeting held on the afternoon of July 7, in addition to the election of officers noted in issue of last week, a committee was appointed to prepare rules. It was composed as follows: Prof. John Craig, Cornell University; Frank Traendly, New York; Wm. Duckham, Madison, N. J.; Harry Turner, Port Washington, N. Y., and Harry Bunyard, New York. An executive committee was also appointed, as follows: Wm. Sim, Cliftondale, Mass., for one year; A. C. Zvolanek, Bound Brook, N. J., two years; W. Atlee Burpee, Philadelphia, three years. Prof. Craig read his paper on the "Purposes of Trial Grounds," which was well received.

In the evening there was a very enjoyable banquet at Kennelly's, Columbus avenue and Eighty-third street. After the wants of the inner man were well satisfied President Turner rapped for order and Prof. Craig was installed as toastmaster. Brief remarks were made by a number present and there was general enthusiasm over the successful inauguration of the sweet pea society, in which Harry Bunyard came in for a poetic tribute for his good work in this connection.

Among the speakers were G. W. Kerr, representing the Burpee farms; Wm. Sim, A. T. Boddington, Maurice Fuld, representing W. W. Rawson & Co.; Chas. Hewson, Buffalo, N. Y.; A. C. Zvolanek, Harry Bunyard and others. Wm. Duckham and Chas. H. Totty, to the regret of all present, were compelled to leave before the oratory began to flow, in order to catch a train for their homes in Madison, N. J.

The meeting on the evening of July 8 was not well attended on account of most of the out-of-town delegates having departed for their homes. Papers by Rev. W. T. Hutchins and A. C. Zvolanek were filed and made part of the record. Resolutions of thanks to the directors and managers of the American Museum of Natural History for the courtesies extended were adopted. Before the final adjournment there were many words of appreciation for Secretary Bunyard's good work.

The exhibit from Fordhook Farm (W. Atlee Burpee) was a very fine one, but it was not entered for competition. We understand that Judges Sim and Zvolanek recommended it for a special award. The following exhibits received special mention:

Joseph A. Manda, West Orange, N. J., orchids.

Julius Roehrs Co., Rutherford, N. J., orchids and collection of foliage plants.

John Lewis Childs, Floral Park, N. Y., callas, Mrs. Roosevelt and Elliottiana and iris.

The Rosary Flower Co., New York, dinner table decoration.

Howard Gould, Port Washington, N. Y. (Harry Turner, gardener) flowering plant of Acalypha Sanderiana.

Honorable Mentions.

Lager & Hurrell, Summit, N. J., orchids.

Peter Henderson Co., New York, collection of sweet peas, over 100 varieties.

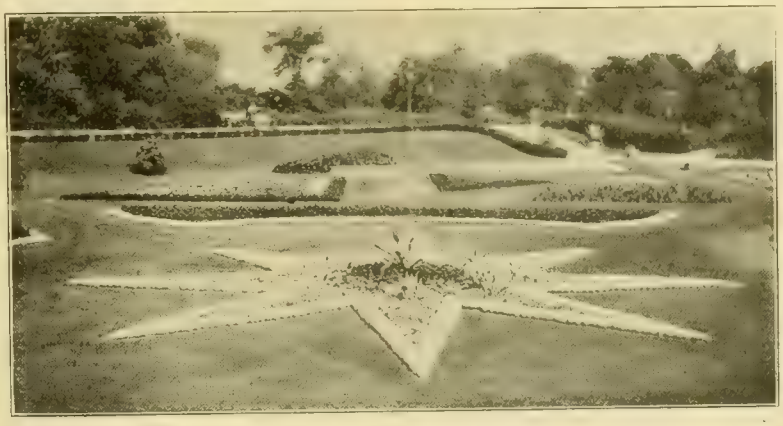
In addition to awards noted last week special mention was given to Chas. R. Hedden, Madison, N. J. (Alex. Michael, gardener).; also to Wm. Duckham, and a certificate of merit to W. W. Rawson & Co.

Chinese Primulas.

Of the many plants grown for decorative purposes during the winter, few, if any, are more valuable than Chinese primulas, which, although not difficult to manage if a certain course of treatment is pursued, are rarely seen in first class condition. This arises, says the Journal of Horticulture, in a great measure from growing them in unsuitable soil and in houses or pits where they are at times subjected to too much shade by having thick mats or similar material thrown over them, or get exposed to strong blinks of sunshine, which sudden transition, acting on their nimsy foliage, has a most injurious effect on their health.

Although they will not endure the full solar rays without prejudice, they require plenty of light to keep their leaf-stalks short and stout and the plants wholly sturdy and strong, and in no way can this better be effected than by affording them a frame or low pit to themselves, stood, or in such position as to be readily shaded from hot sun by means of tiffany or other light screening material drawn over the lights as occasions require. The shade of a tree or wall is not advisable, as the screening by these means is too dense and continuous, yet liable to fluctuations both as regards dryness and moisture. Not only is it highly important that they be favored in the above manner, but it is equally so that a regular supply of atmospheric and root moisture should be afforded them, and above all an essential point is that of a cool bottom to stand on, together with its imperviousness to slugs and worms, which otherwise find their way in and do irreparable damage.

The first thing to set about, therefore, is to scatter some rough ashes where the frame is to stand, or, as a better conductor of moisture, refuse lime left from sifting may be used, treading down to an even surface, and in the rough bottom thus formed place in three inches depth of coal ashes, making the surface even by rolling or beating with the back of the spade. In the case of a cold pit ashes should be used in a similar way, and so as to leave space of 15 to 18 inches from the surface of the coal ashes to the glass. So made it will be secure against intrusion from below, and by the drainage from the pots, together with the bedewing overhead or sprinkling between the pots in dry, hot weather, the floor will become so saturated as to be always cool and moist, and an atmosphere generated conducive to a clean growth. Thus the conditions for growth are more congenial than in a house or other situation where the air is arid and in which the plants are stunted and as-



MIXED BEDDING AT WASHINGTON PARK, CHICAGO.

sailed by red spider, whereas these pests cannot thrive or exist under circumstances favorable to and necessary for the welfare of the plants.

Not one of our greenhouse plants has received more attention in the matter of improvements than the Chinese primula. As originally received in this country from China in 1820 the flower was insignificant and the color poor. Now we have single and double flowers of many superb colors, and the individual blooms of several varieties are imposing in size. The foliage also has been developed into ornamental forms, so that the plants are admirable decorative subjects before a flower is visible. There are several strains, and to obtain the most satisfactory results it is necessary to obtain the most up-to-date varieties. For general purposes the Superb Fringed Red and Superb Fringed White meet all requirements. The plants are of strong growth, bearing flowers well above the foliage. The flowers are large, finely formed, of good substance, elegantly fringed, and (in the case of the first named) of a rich purplish red color, with a small yellow eye, having the advantage of standing the sun without changing color better than any other primula. The other is the perfection of white primulas for general cultivation.

What more does anybody want? Variety! In this respect there is the greatest scope for indulgence. Crimson King, deep crimson flowers, and small yellow eye encircled by a nearly black band. Snowflake, with fern-like foliage, fringed snow-white flowers with a well defined small yellow eye. Favorite, delicate pink, each petal edged with bright carmine rose. Blue, large flowers of a rich blue color and elegant form. Crimson, velvety violet-crimson, fine form, great substance and exquisitely fringed. Rose, flowers of a charming bright rose-pink shade. Salmon, a most beautiful and distinct salmon color. Scarlet, brilliant and intense rich scarlet-crimson flowers of medium size, fine form, and elegantly fringed. Brilliant King, finely fringed dark velvet crimson, blooms of fine form and great substance. His Majesty, robust in plant, with dark red stems and gigantic art-shade crimson blooms of massive substance, lovely velvety surface and beautifully fringed. The Duchess, pure white flowers and clear yellow eye, surrounded by a band of deep rosy carmine. Orange King, medium sized flowers of a bright orange color, bright rose when fully developed, overlaid with a deeper shade and edged with orange salmon. Then there are the giants, vigorous in growth of plant, with fringed foliage:—Gigantic Red, rich purplish red; Gigantic Rose, carmine-rose, with a well defined eye, very effective; Gigantic Scarlet, strong growing, enormous trusses of extra large flowers, intensely rich, deep scarlet-crimson, gorgeous and effective; Gigantic White, fern-leaved, of strong growth and enormous size of flowers; the Queen, and hybrids, flowers of enormous size, massive substance and elegant form of flowers, which are white, tinted rose.

Double primulas come last, not least, for in a cut state they last longer than the singles, as well as on the plant, though, of course, they are only semi-double when raised from seed, and to which our present remarks apply. They are procurable as seed in Double Red, Double Rose, Double Salmon, Double Scarlet and Double White. Mention of cut bloom reminds one of the varieties of Primula stellata, albeit a form of P. Sinensis, yet a very distinct and valuable variety for growing in pots for the greenhouse or table decoration, as well as for use in winter for cut bloom. The pretty and attractive dark red foliage makes an effective contrast to the very graceful pyramids, of long duration, and do not drop so quickly as in most other varieties. It requires the same treatment as the ordinary Primula Sinensis, but is a taller plant, and the stronger whorls require staking, the plants sometimes attaining to a height of two feet. There are a number of varieties, chiefly distinguished by their color, of which the Blue is the most rare. Crimson, Red and Rose, Salmon Pink, White and Giant White are the other colors. Stellata Double Crimson, is a very attractive variety, with rich crimson, well formed flowers and elegantly cut foliage, and most useful for table decoration.

Chicago Florists' Club's Annual Picnic.

SEE OUR PASTIMES PAGE 1286.

Ed. Enders, Chairman.

T. E. Waters.

We present herewith portraits of the men who are in active charge of the Chicago Florists' Club's annual picnic to be given in Riverview park grove July 22.

Ed. Enders is the present capable head of the Good of the Club committee and as such was appointed by President Geo. Asmus to the chairmanship of the picnic arrangements committee.

Allie Zech, who is chairman of the sports and pastimes committee, was asked with his committee to work in conjunction with the Good of the Club committee in planning the outing. Allie is the boy who is organizing a championship bowling team going to the Cincinnati convention.

T. E. Waters is a hard man to lose when it comes to planning a florists' picnic, and this affair wouldn't be what it ought without him.

Frank Pasternik is buyer for the Ernst Wienhoeber Floral Co., and can bowl a few himself. He is going to the S. A. F. convention next month, possibly as a member of the bowling team, sixth man at any rate.

John Kruchten is also a member of the picnic committee. We were unfortunate in being unable to secure his photograph in time for this issue.

Allie Zech.

Frank Pasternik.

Irrigation on Old Eastern Farms.

Portion of a paper read by Burnet Landreth at the annual meeting of the American Seed Trade Association, Niagara Falls, N. Y., June 23.

Every reader of leading western agricultural papers, and still more so every traveler journeying west of the Rocky Mountains, sometimes east of the mountains, is more or less familiar with the interesting processes and magical advantages of irrigation on what formerly were dry plains, once districts abandoned to sage brush, cactus, horned toads and rattlesnakes.

The national government has expended $14,000,000 in the three states of Arizona, California and Nevada, $6,000,000 being for the construction of dams, in addition to which the Salt River dam now building will cost $3,500,000 when completed.

Under the terms of the congressional appropriation known as the reclamation fund and of the Carey act, the Department of the Interior of the national government has in seven years expended $45,000,000 in the reclamation service, that is the storage, diversion and development of water in addition to giving to the arid states 1,000,000 acres each of government lands provisionally upon state irrigation. No broad-minded man objects to these most practical, though most enormous, aids to agricultural development. But what has the national government done to promote irrigation processes on the farms of the old eastern states? Just nothing! The men with a mission are not interested in promoting the improvement of lands already occupied—no money in it for them. I do not profess to be an expert in western irrigation processes, only knowing the immensity of profit therefrom, not only to the agriculturist, but to the merchants supplying their domestic wants, to the transportation companies carrying their products, all this increasing industrial and commercial and railroad undertakings. But I do know very much of the losses incurred by eastern farmers who annually see their crops of corn, vegetables, melons, strawberries, tobacco, cotton and small fruits, dry up before their eyes from the effects of midsummer droughts, while past these very same farms immense volumes of water sweep in the sunken or depressed channels of the rivers draining eastward along the Atlantic slope or westward towards the Mississippi.

In the east every farmer, as a general rule, must get his water from his own river front, if he has one, or from wells dug on his own land, for the reason that adjoining farmers will not consent to their lands being bisected by irrigating canals for the benefit of others; nor will farmers lower down a stream consent that their water supplies from natural streams shall be diverted by farmers higher up the stream. Consequently in the east an intending irrigator must get his water from his own river front or from wells on his own property, the water from which must be pumped into surface reservoirs located on elevated points of his property.

But the farmer of the east, to irrigate either from reservoirs filled from wells or supplied from river fronts, must engage in experimental work and an outlay of considerable time and money, very much of which time and money could be saved to 100,000 farmers if the Department of Agriculture could be authorized by congress to erect an irrigating station on the Potomac above or below Washington, where the water could be raised from the river, there considerably below

the surface of the farms, carried back by reservoirs to the higher parts of the land, and from them distributed, finally finding its way to the river.

An irrigation farm managed by the government would pay for itself, not only as a kindergarten, but as an experimental farm where many agricultural tests could be concentrated and conducted to great advantage. The pumping machinery, water-gates, sluice-ways, which could be exhibited in operation at such an irrigation station, would no doubt be loaned by the many manufacturers all over the country who, anticipating sales, would only be too glad to have their manufactures shown under such good auspices; and the public would be surprised to see the powerful and very varied apparatus made for irrigating purposes.

The farmers of the country, from Maine to Florida, along the Atlantic slope, and that larger number resident in the Mississippi valley, from the headwaters to the gulf, could themselves or by their delegates visit the station, familiarizing themselves with the processes, and ultimately establish 100,000 private irrigated farms, resulting in an addition to the nations' wealth of ten thousand times the volume of the outlay.

To sum up, I propose that the secretary of the Department of Agriculture incorporate in his draft of suggested appropriations, to be presented to the next congress, February, 1910, the sum of $50,000 for the purchase of land for an irrigated station. Such a governmental station would be unique and would at once be recognized as so eminently practical that, without doubt, many states would in time establish similar stations, and a new era of agricultural progress be inaugurated in the older states, which would bear results greater in value than the total value of all the work done by the Department of Agriculture since its inception, for the area of farm lands on the river banks from Maine to Florida and from the Atlantic to the Mississippi in over 50,000,000 acres under the plow, the crops on which every year are grown under more or less jeopardy consequent upon the re-occurring droughts of midsummer, while an immensity of water rushes past the thirsty and languishing if not, as too often, the dying crops.

Destroying Grasshoppers.

ED. AMERICAN FLORIST:—

Is there any way of destroying grasshoppers? For the last three years I had such trouble with them in my dahlia fields that they destroyed all my flowers so I had scarcely any to cut. I notice my fields are full of young ones now. H. W. K.

Wisconsin.

The most practical methods of which we have any knowledge for the destruction of grasshoppers is by the use of poisoned baits. Very large level areas can be gone over with the hopperdozer, a pan of sheet iron with water in it and oil floated on top, but this is only suitable for these level areas. What has come to be known as the Criddle mixture is giving most satisfactory results on the ranches of both the United States and Canada. The mixture is composed of half a barrel of fresh horse droppings in which is mixed one pound each of salt and Paris green. If the horse droppings are not fresh the salt is dissolved in water and mixed with the manure and poison. When this mixture is scattered freely about where the grasshoppers are abundant they seem to be attracted to it, for they devour it readily and are poisoned thereby. Dr. James Fletcher, entomologist for the Dominion of Canada, cites an instance where this mixture had been scattered freely around the edges of a field and states that this particular field stood out as a green patch in a brown plain, as it was situated in the midst of fields where nothing had been done to destroy the grasshoppers. This Criddle mixture now seems preferable to the poisoned-bran remedy that has given and still continues to give beneficial results, for it is less expensive than the latter and less likely to poison other animal life.

F. W. W.

Twenty Years Ago.

JULY, 1889.

About 90 varieties of roses were included in the collection at the Arnold Arboretum.

A pot-washing machine was one of the novelties made by a Philadelphia firm.

Mme. Cusin was one of the most popular roses.

The lily ponds in Lincoln park, Chicago, were constructed and Victoria Regia planted.

W. Atlee Burpee was among the visitors to the Paris exhibition, returning July 3.

Florists were getting their troubles with the express companies in the matter of rates on plants.

A Delaware ship owner had his daughter christen a new vessel with a bunch of roses instead of a bottle of champagne, so this is not as new a custom as some people think.

Uncle John Thorpe was distributing ladybirds to chrysanthemum growers to rid their plants of aphides.

To Be Done Now.

IN THE GREENHOUSES.

Shade the house where Adiantum Farleyense is grown and run it fairly cool. A night temperature of 65° is ample and, with plenty of air, will produce good hard fronds.

Keep the young poinsettias in a good light and allow plenty of air to prevent drawing.

Plenty of heat and light with ample atmospheric and root moisture are needed to bring out the color in coleuses.

Plant a bench of Asparagus Sprengeri if there is one to spare.

When the rose houses can be got down to 60° at night, fire up and apply sulphur to the pipes should any mildew be present.

Finish the planting of chrysanthemums without delay.

Water calanthes freely now that the roots have taken a good hold of the compost and give weak applications of manure water.

Avoid wetting the walks unduly in the rose houses as it makes them bad to walk on and the moisture at night may do mischief.

Reserve a few rose plants to fill blanks later when throwing out the benches that are not needed.

After flowering place Cattleya Mossiæ in a good position to make the new growth.

Reserve at least half of one day a week for disbudding, picking over and cleaning up generally.

Another sowing of pansies for flowering in fall should be made. Keep the seedlings cool.

OUTDOORS.

Finish the pruning of spireas weigelas and other flowering shrubs.

Where late peas are wanted sow Prizetaker, Autocrat or some of the dwarf early kinds. They must have the best of attention right along or they will be useless.

Any greenhouse plants stood outside for the summer must be freely sprayed several times daily.

Keep the flowers pinched off the geranuiums and other bedding plants that were set out for stock.

Put a stout cord or run a lath around beds of sunflower, cosmos or flowers of similar habit to prevent their being blown or falling over.

Any watering that is done should be done thoroughly. Daily sprinklings bring the roots to the surface where the hot sun burns them and wilts the plants.

Go over the mixed shrubbery and see that the strong growing kinds are not overrunning the weaker though choicer species.

After rains break up any clods left from late plowing and get the land in condition for fall crops.

Sow the Batavian endive in a cool spot and plant out as soon as ready.

Clear off early flowering annuals before they became untidy.

Feed dahlias when they begin to grow freely and stake or otherwise support the growths.

OBITUARY.

Herbert Heller.

Herbert Heller, New Castle, Ind., died on the evening of July 9 at his home on South Main street. Mr. Heller had been sick for several months following an operation in January, which it was hoped would have relieved him but cancer intervening he has laid for some time with no hope of recovery. Mr. Heller was one of the foremost growers of American Beauty roses in New Castle and, although a young man, his firm had been very successful both in the commercial end of rose growing and as an exhibitor of choice stock at all the principal shows all over the country.

Mr. Heller was a native of Knightstown, the son of Moses Heller and was born in 1871. In 1904 he was married to Mary Smith who, with an infant son, survives him. Mr. Heller's mother, brother and sister also survive him. He was universally liked and respected both by his associates in business and those who knew him as friends. He had given up his entire time for several years to his successful business. Always genial and smiling, he will be sadly missed by his family and his employes. His brother, Myer Heller, has been connected with the business with him and this will be continued as heretofore.

Mrs. Godfrey Aschmann.

It was with extreme regret that we heard of the death of Mrs. Aschmann, wife of Godfrey Aschmann, the well-known plant grower of Philadelphia. Mrs. Aschmann's death took place early in the morning of July 10, she having been stricken on the Saturday morning previous, just one week before her death. The stricken lady never recovered consciousness. Our deepest sympathy is with Mr. Aschmann and his six children in their sad bereavement. They are left to mourn the loss of a devoted wife and mother who was loved and respected by all who knew her.

Philip Hagenburger.

Philip Hagenburger, aged 64 years, for 35 years florist for the Lake Shore railroad, having charge of all the depot floral decorations between Buffalo and Toledo, passed away suddenly July 4 at his home in Mentor, O., from an attack of neuralgia of the heart. Mr. Hagenburger complained of feeling ill early in the morning and death followed soon after. He is survived by a wife and four children.

THE alarming drought in the New England and eastern states generally, chronicled in the newspapers and of which a few instances are given in our columns, lend an added interest to Burnet Landreth's paper on irrigation, excerpts from which we publish on page 1266.

THE AMERICAN FLORIST desires the names of members who have been very regular in attendance at the recent annual conventions. It desires to compile a list of those who have attended the most meetings, and will be glad to receive records from its subscribers who have been constant in their attendance at the S. A. F. conventions.

As the bedding plants come into line take notes of any good combinations or beds to be repeated or changed next year.

DENVER, not to be outdone by Pueblo and Colorado Springs, had a hailstorm of its own on July 5; nearly everybody hit was insured.

MOST of the glass factories have shut down for the summer, and, as the demand has been very active, prices have advanced about 10 per cent, discounts now being quoted at 90 and 30 off for single strength and 90 and 35 for double.

THE Illinois Outdoor Improvement Association, an organization that originated at a state conference at Urbana, March 31, 1909, under the auspices of the University of Illinois, is out with an appeal to all interested in beautifying the state. The committee on organization met in Chicago, April 30, and formed a constitution to be submitted at a coming meeting this fall. All interested can obtain particulars and copies of the announcement by applying to the secretary, A. P. Wyman, 17 E. Van Buren street, Chicago.

Personal.

Sir Joseph Hooker, the veteran British botanist, has just passed his ninety-second birthday and was present at the recent Darwin celebration in Cambridge, England. The actual date of his birth was June 30, 1817.

George E. Baldwin of Carillo & Baldwin, Secaucus, N. J., has gone to Europe on a combined pleasure and business trip.

Society of American Florists.

WHAT IS THE MATTER WITH CINCINNATI?

The writer has just returned from a visit to Cincinnati in regard to convention matters, and after a thorough canvass of the situation is prepared to most emphatically state that both Cincinnati and the Cincinnati florists are "all right."

The latter seem to have anticipated every difficulty and every discomfort which might arise to their visitors and have taken effective steps to avoid them. They say unanimously that Cincinnati is not so hot a place as people think, but as they have learned that the impression has gone out that exceptionally hot weather is likely to be experienced at the convention time, they are taking steps to avoid that discomfort all along the line. They have decided not to decorate the hall, which would cost $150 or $200, but instead to put all of that money into extra ventilating fans so that there will be a good breeze stirring in every part of the hall and visitors will be perfectly comfortable at all times. At the Gibson house, which will be headquarters, they have arranged that a fan will be furnished in every room, without charge, for all those who engage rooms in advance.

The president's reception will not be held in a stuffy hotel ball-room, but will take place outdoors in a park up on a hill where the cool breezes play and where the absence of a vest or even a coat will not cause comment. After the reception there are great doings in store, but the writer is sworn to secrecy regarding them for the present.

The arrangements for bowling are admirable. The alleys are ideal and it is stated that no one can get hot there unless from the violence of his own physical exertions or from mental anguish caused by failing to make as many strikes as he would like.

Friday will be devoted to an excursion by boat up the river to a large island maintained as an amusement park. Here also much secrecy was maintained and many knowing looks were exchanged among the local men regarding the stunts which were to be pulled off. I did hear accidentally, however, something about a barbecue—an ox and two or three sheep to be roasted whole, and it was stated that the ball game would be held at this place in the afternoon. Take it all in all, the prospects for a comfortable time and a most enjoyable one could not be better.

Superintendent Murphy is the busiest man ever these days. He has already sold over 10,000 feet of exhibition space and says that the way the inquiries and applications are coming in there is no doubt but what all available space will be taken, even though the full space is three or four time as great as that at Niagara Falls. Address William L. Murphy, 311 Main street, Cincinnati. All those who have not already arranged for exhibition space should take heed that they make application at once or it may be too late.

W. N. RUDD Sec'y.

July 9, 1909.

Florists' Hail Association.

The following is one of the many letters of commendation the Florists' Hail Association is receiving:

"Your letter of June 23 received; also check from the Florists' Hail Association to the amount of $107.66 less reinsurance, 92c, to cover loss by hail on May 29, 1909. We wish to thank the association for the prompt attention they gave to our loss and satisfactory settlement in every way, shape and form.—Nussbaumer Floral Co., San Angelo, Tex."

JOHN G. ESLER, Sec'y.

A "Grafter."

ED. AMERICAN FLORIST:—

An "agent" has been calling on peoule here and collecting money to make roses and clematis vines everblooming. For instance, he says the "red rambler must have a white rambler as a companion plant and then the red rambler will bloom continuously all summer instead of just a short time." He says he can do this by grafting and is taking in money all right. What is the truth?

STREATOR.

There is nothing remarkable about grafting (budding) a white rose upon a red one, whether rambler or otherwise, but this would not have the effect of making either a constant bloomer. It would not, in fact, alter the habits of either. The two varieties would simply grow together unless one was of a stronger habit and ultimately overcame the other. As to the clematis "Streator" does not say how this plant wizard is to make it everblooming and this part of his business is probably pure fake. Have nothing to do with him and warn other people against him is our advice.

Important Foreign Exhibitions.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland square, Edinburgh, Scotland.

Meetings Next Week.

Boston, Mass., July 20.—Gardeners' and Florists' Club of Boston, Horticultural Hall.

Detroit, Mich., July 19, 8 p. m.—Detroit Florists' Club, Cowie building.

Grand Rapids, Mich., July 19.—Grand Rapids Gardeners' and Florists' Club, Board of Trade rooms, Pearl street.

Hartford, Conn., July 23, 8 p. m.—The Connecticut Horticultural Society, County building.

Montreal, Que., July 19.—Montreal Gardeners' and Florists' Club, Royal Guardians' building, 211 Sherbrook street.

Newport, R. I., July 21.—Newport Horticultural Society.

Philadelphia, Pa., July 20, 8 p. m.—Florists' Club of Philadelphia, Horticultural Hall, Broad street, below Locust.

Providence, R. I., July 19, 8 p. m.—Florists' and Gardeners' Club of Rhode Island, 96 Westminster street.

Salt Lake City, Utah, July 20.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

Seattle, Wash., July 20.—Seattle Florists' Association, Second avenue and Columbia street.

St. Paul, Minn., July 20, 8 p. m.—Minnesota State Florists' Association, 510 Snelling avenue, north.

Toronto, Ont., July 20, 8 p. m.—Toronto Gardeners' and Florists' Association, St. George's hall, Elm street.

Winnipeg, Man., July 22.—Winnipeg Florists' Association.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—Young man studying for estry and paying his expenses through college wants outdoor work until fall in or near Chicago.
Key 850, care American Florist.

Situation Wanted—To recommend a sober and trustworthy greenhouse man; single; any firm wishing a man they can rely on. Address
THE MINGE FLORAL CO., Mobile, Ala.

Situation Wanted—German, 22 years old, wishes position in rose houses as section man; near Chicago preferred. Address
ERWIN EINSMANN
111 Mead Ave., Port Chester, N. Y.

Situation Wanted—By competent florist, age 39, single, German; 21 years' experience; able to take charge of place; south or southwest preferred. GEO. DORNER,
618 N. Hinds St., Greenville, Miss.

Situation Wanted—As gardener in commercial or private place; have had 12 years' experience; used to greenhouse work; good reference.
WM. BOCKER, care Young & Nugent,
42 W. 28th St., New York City.

Situation Wanted—As foreman, good grower of roses, carnations cut flowers, bedding plants; used to store work, seeds, designing, etc; up to date methods; age 35; references. Address
Key 851, care American Florist.

Situation Wanted—By sober young man who has had many years' experience in carnations, chrysanthemums bulbous and bedding stock; would prefer to take charge of place; can furnish best of references. Address
Key 854, care American Florist.

Situation Wanted—Gardener German, 25, desires position in commercial place; experienced grower of gardenias, carnations, 'mums and roses; best of references from Germany, France and England. Address WILLIAM BOCKER, care Mrs. Schaefer 428 E. 67th St., New York City.

Help Wanted—Strong young men for handling wheelbarrows and as helpers in greenhouses; steady employment to the right kind
POEHLMANN BROS. CO., Morton Grove, Ill.

Help Wanted—Married man who understands roses and carnations, to work under foreman; salary, $60 a month with house rent free. Address
IDLE HOUR NURSERIES, Macon, Ga.

Help Wanted—First-class designer, decorator and storeman for retail store. Address, giving particulars, salary, etc.,
Key 844, care American Florist.

Help Wanted—Experienced seedsman, especially for house work on garden seed and packet seed department; also to travel on the road three to four months during the season. Address
Key 857, care American Florist

Help Wanted—Reliable traveling salesman to work market garden trade also to work in store; must have experience on the road also a thorough knowledge of the seed business; good salary to right party; best of references required.
J. F. NOLL & Co.,
115 Mulberry St., Newark, N. J.

For Sale—A growing florist business; a splendid opportunity for a good florist. For particulars write FRANK L. SMITH
The Land Man, Dwight, Ill.

For Sale—Greenhouse Property near Boston; dwelling house, barn, horses, wagons and tools; 13,000 or 14,000 feet of glass, city water; good home trade; easy terms.
Key 853, care American Florist.

For Sale—27,000 ft. of glass; six town lots 75x150 ft; five acres, two squares from greenhouses; good residence; small barn; all in good condition; doing a profitable business; will sell cheap; will send photos of place to any one interested and wants more information. Address
D. C. NOBLE & SON, Columbia City, Ind.

For Sale—Greenhouse plant of about 19,000 feet of glass; steam heat; cheap coal; all stock goes with the plant; six-room cottage; about one acre of ground; on car line; horse, wagons, tools, designs and all go with plant; a rare chance for a good florist with $5,000 cash; balance on easy terms; reason for selling, poor health, not able to look after the business. Address
A. D. JONES, Colorado Springs, Colo.

WANTED.

AT ONCE. A married man as florist and kitchen gardener. Must have experience and be capable of taking full charge of a private greenhouse and large grounds. Best of references required. A permanent position for a capable man. Address
J. M. STUDEBAKER, South Bend, Indiana.

For Sale.

Greenhouses, 15,000 feet of glass; near cemetery; no competition; everything in good order; fine chance.
Key 852, care American Florist.

BOILERS.

One 100-h.p. internal fired, for 125 lbs. steam; practically new. One 125 h.p. return tubular boiler, for 80 lbs. steam; in good condition.
Two NEW 25-h.p. upright boilers.
One new steel heating boiler for 600 feet steam radiation. One second-hand heating boiler for 1000 feet radiation.
Full specifications and price on application.
THE D. CONNELLY BOILER CO., Cleveland, O.

WANTED --- At Once

A good grower of roses, carnations, 'mums and general line of pot plants; must be able to produce results; permanent position and good pay.
—— Address ——
Key 839, care American Florist.

For Sale.

The finest place in northern Ohio, doing fine retail and wholesale business with chance to increase 50%; within one hour ride from Cleveland with electric and steam Ry.; eight room dwelling, 5 room boiler house, 7 houses, 2 steam boilers, steam trap, fine city water; everything complete.

This place will interest you if you are looking for something good.

Key 855, care American Florist.

Low Rates to Chicago

The Chicago Association of Commerce has arranged with the Western Passenger Association for a special rate of one and one-half fare for the round trip during months of July, August and September.

SOME STOCK SHORT.

While business was not very heavy the past week there was less evidence of a glut, in fact we experienced a shortage in some lines. Good roses were scarce but there was an abundance of carnations, especially white. Sweet peas were equal to the demand and the same may be said of Longiflorum and Rubrum lilies. Some exceptionally fine gladioli were to be seen at Wm. Murphy's early in the morning which were eagerly sought for at $5 per 100. Undoubtedly the light colors were responsible for this as they were good property for funeral work. Green goods of all kinds were to be had in quantity with a satisfactory demand and trade in the florists' supply line was good.

The regular monthly meeting of the Florists' Society was held at the Zoological gardens on Saturday, July 5 at 5 p. m. with about 30 members present. Reports from the different committees in charge of convention affairs were heard and everything is working smoothly. J. Elias McCullough was present and donated a fine gun for first prize in the shooting contest and he was tendered a vote of thanks by the society. It was definitely settled to hold the president's reception at the Zoological gardens and Albert McCullough, the chairman of this committee, was instructed to make the necessary arrangements so we can look for something out of the ordinary on the night of August 17. Coney Island was selected as the place to hold the barbecue. This feature will be a hummer and a fitting wind-up for the biggest convention ever held by the Society of American Florists.

We regret to learn of the death of Herbert Heller of New Castle, Ind. Herbie was well known in this city and was a frequent caller. His many friends here take this method of extending their sympathies to the bereaved family. E. G. Gillette went to New Castle Sunday night to be present at the funeral which took place Monday morning and was, we learn, largely attended by people from all walks of life, showing the esteem in which the deceased was held.

E. F. Winterson of the S. A. F. sports committee came down from Chicago last Sunday and all day Monday was around with the local committees on sports. He was agreeably surprised to find how nicely everything had been arranged by our committees and left for the windy city Monday night feeling that affairs at this end are in good hands.

Miss Cora Pherson, bookkeeper for Wm. Murphy, returned from a month's vacation last Monday. She did not gain as much in weight as last year, being shy two pounds, but at that she looks good to some of the boys hereabouts.

There will be a meeting of the executive board of the Florists' Society on Monday night, July 19, at 8 p. m. at the Sinton hotel. We should like to see every member present as a lot of business is to be transacted.

BASSETT & WASHBURN

Store and Office: 76 Wabash Ave. CHICAGO Greenhouses: HINSDALE, ILLINOIS.

Chicago.

President Otto Schneider of the board of education is up against some pretty strong opposition in his fight for re-election. Alfred R. Urion is making the running against him with T. W. Robinson, Chester M. Dawes and Frank I. Bennett as strong supporters. The strong, progressive men of the board are in the saddle and with the newly appointed members are striving to place the school board on a business footing. It is hoped that one of their early acts will be to remove the ban on flowers at school exercises.

C. L. Washburn, of Bassett & Washburn, lately returned from a three days' auto trip through Wisconsin, reports that they will soon begin cutting their summer lilies. He also says they have been particularly successful with their Kaiserin this season and shows some especially fine blooms to bear out his statement. Mrs. W. E. Horton, bookkeeper for this firm, is spending her vacation at Racine, Milwaukee and other nearby points. Joe Einweck, shipping clerk for the same house, is also taking a well earned rest.

Two men were badly beaten and six arrested as the result of a riot at the pickle farm of the L. A. Budlong Co. in Bowmanville, July 8. The men hurt were taken for detectives and attacked by laborers at the plant.

Bernard Schwierer, manager of the Geo. Wittbold Co.'s Clark street store, and Joe Schouten, of the cut flower department at the Buckingham place establishment, are on their vacations.

Joe Foerster, of the J. B. Deamud Co., was called away June 12 by the news of the sudden death of his father in Medway, Ont. His friends in the trade extend their sympathy.

Walter G. Matthews, who has been in Kansas City for the past year passed through the city on his way to Dayton, Ohio, to take up a position with his father.

(OTHER CHICAGO NOTES ON PAGE 1272.)

Mount Tamalpais to Become Public Park.

San Francisco, July 9.—Mount Tamalpais, famous among the tourists of the world as the location of the crookedest railroad, and almost equally noted as the most conspicuous scenic point about San Francisco bay, will be shortly converted into a vast public park, if the plans of some of the leading citizens of the trans-bay cities prove successful.

Besides being used as a public park, the mountain will become the source of a municipal water supply for the trans-bay cities, as it is in the water district set aside by the last legislature. At the head of the committee promoting the affair is William Kent, who gave the Muir redwoods to the government for a national park. This park is situated on the slope of the mountain.—Los Angeles Express.

CHAMPAIGN, ILL., July 12.—The Illinois Florists' Association's advisory committee met here today to consider plans for the coming year. There were present the full committee, Messrs. Rudd and Vaughan of Chicago, Ammann of Edwardsville, Gullett of Lincoln and Washburn of Bloomington. Professors Blair, Dorner and Hopkins met with the committee. In a general way it was thought best to devote the efforts of the station towards continuing the fertilizer experiments to definite results and to add one new house to the present plant.

PEONIES VS. ASTERS.

Peonies are no longer a factor on the local market; the call for them is becoming beautifully less each day. The buying public is tired of them and turns up its nose at even the choicest blooms. Thousands of dozens still remain in cold storage literally eating their heads off, those that are not eaten off falling off almost as soon as they strike the superheated air with which the great inland summer resort is being favored at present. Then enters the dominant chord of this minor theme—the lowly aster—and, working its way slowly and gracefully, but no less insidiously around the peony swan song, resolves itself into a triumph song of victory and in the ensemble the peony is lost.

While this may be in a measure prophetic, the cold hard facts that stare us in the face outline the situation so clearly that he who runs may read. Already asters are coming in, not a great many to be sure, but in increasing quantity each succeeding day, while the cold storage is full of peonies of, to say the least, doubtful quality. What is to become of them? It does not require a prophet to answer this question. Sweet peas literally swarm all over the market—good ones too, especially those of the Spencer variety—but the buyers are deaf, or asleep, or on a journey and do not respond to the frantic appeals of the seller who is offering his wares at whatever price they will bring.

The rose situation is in no wise altered from our report of a week ago. Killarney, Kaiserin and summer American Beauties are of very good quality and in fair demand, the extra select bringing good prices while the second quality are hard to move at any price. There are also a few My Maryland and President Carnot, with a sprinkling of Perle. Bride and Bridesmaid are small budded and sell only in small lots while Richmond is almost out of the race. Carnations—but what's the use?

NOTES.

No hope is held out by the physician in charge for the recovery of Uncle John Thorpe, the report from his bedside on Wednesday of this week being that he was slowly sinking and it was only a matter of a few days at the longest until he passes from the cares of this world.

W. H. Gullett, of Lincoln, now in his seventy-seventh year has been a patient at Mercy hospital for a few weeks; he is believed to be mending now and likely to round out a long and useful life. He has seen a great advance in floriculture in 30 years.

E. C. Amling is spending the greater part of his time away from his business during the quiet season, but John Michaelson reports they are still having a big run on American Beauty, of which flower he is showing some fine specimens.

A. Malchow of North Clark street reports a fine spring trade. He sold out entirely of bedding plants and could have sold more. The night blooming cereus has been flowering with him and proved quite an attraction.

The Chicago Evening Post says: Another one of Jens Jensen's appointees has been removed from office. Slowly and surely it becomes evident that the west parks are slipping back under the paralyzing control of politics.

The committee in charge of the arrangements for the Florists' Club picnic met at Zech & Mann's on Wednesday evening to complete their final plans for July 22.

W. J. Smyth is improving rapidly and the physicians state that there is now no danger of any permanent stiffness resulting from his late auto accident.

Nick Wietor is keeping his family and friends well supplied with the succulent muscallonge that he is sending down from the lakes.

J. B. Deamud leaves for the farm July 16, returning to the city in time to go to the S. A. F. convention a month hence.

Reports from Aurora bring tidings that John Smely is around again, little the worse for his scalding bath of two weeks ago.

The first large shipment of Lilium Harrisii is due in New York on Friday and French bulbs the week following.

The A. L. Randall Co., is showing some very handsome long stem Killarney and choice Gladiolus America.

The West Park policemen are petitioning for an eight-hour day. Park police work must be strenuous.

Frank Ayres left July 15 for an extended trip through Canada,

C. M. Dickinson is at his summer cottage at Pelican Lake.

Visitors:—Chas. Schnell, of L. S. Donaldson Co., Minneapolis, Minn.; Clyde Waterbury, Denver, Colo.; J. R. Johnson Dwight; Miss Kirk, with J. M. McCullough's Sons' Co., Cincinnati, O.

(OTHER CHICAGO NEWS ON PRECEDING PAGE.)

NOTICE!

Manhattan Flower Market

WHOLESALE FLORISTS

Telephone: 1016 Madison Sq. 46 W. 28th St., NEW YORK

Ship us some stock. We need a large supply of all kinds of flowers, **Roses, Carnations, Sweet Peas, Narcissus, Summer Stock, etc.,** for our new store. Reliability and responsibility first-class. Good prices and prompt returns. Good opportunity.

New York.

STOCK POOR.

The wholesale district is very quiet, with a light supply of good stock and buyers very shy. Special American Beauty and tea roses are rather scarce but the demand being so light there is no inconvenience. Special Beauties bring 25 cents, Killarney six and eight cents. The carnations hold on better than was expected but are selling very cheap and as the asters are now beginning to come in considerable quantities, things look rather blue for the divine flower. There is a great supply of feverfew, candytuft and other white stock, and about the only excuse for its being here seems to be that it is easy to grow. Hollyhocks are also being sent in by the boxful, cut short for wiring in funeral work, and some of them sell. The district is full of sweet peas, many of them very short stemmed, and if the present dry weather continues they will soon be shorter.

July 12.—The market is stagnant this morning, with practically a dearth of special American Beauty roses. The few that arrive sell readily at 25 cents each. Small lots of good Killarney and Kaiserin Augusta Victoria are coming in. When wanted they bring five and six cents each, but the demand is light.

NOTES.

The private gardeners are well represented on the official board of the recently organized National Sweet Pea Society of America. Harry Turner, president, is head gardener at Castle Gould, the estate of Howard Gould. As vice-president of the New York Florists' Club he succeeded to the office of president on the death of E. V. Hallock. At the various exhibitions held here within the past few years he has exhibited fine stock and taken a number of prizes. W. H. Waite, vice-president, is superintendent of the extensive estate at Greystone, N. Y., of Samuel Untermeyer, a lawyer of national reputation. Mr. Waite is a capable and clever young man, popular with the fraternity. William H. Duckham, treasurer, has long been known as the guiding spirit of the horticultural features on the extensive James estate, Madison, N. J. He is a modest man, but it is simple justice to state that he thoroughly understands his business and gets results, and has few equals in his chosen profession. Harry Bunyard, secretary, is one of ye seedsmen or camp followers. For aught we know he may be a good gardener, but we never saw him work at it; he sells the seeds and lets the other fellows do the sowing and watering. It is recognized as a fact that he is very active and energetic in all he undertakes and the sweet pea society is striking proof of his industry.

Henry Pritchard and wife of Astoria celebrated Independence day by giving an old fashioned chowder party to a large gathering of relatives and friends. Mr. Pritchard is a well known grower of Astoria and though past the meridian of life, both he and his wife are hale and robust and enjoy the company of young people. Among those present were Arthur Pritchard, a son, who is manager of a large retail store in this city, Walter Pritchard, another son, and a number of grandchildren.

Chas. H. Totty, ex-president of the Florists' Club, has taken over under lease, the Florham Farms greenhouses, located at Madison, N. J. This new move of Mr. Totty will give him a glass area of about 100,000 square feet and will also give him an opportunity to show the trade that there is "plenty of room at the top" for a man who thoroughly understands his business. You can depend upon it that he will make good!

The florists, seedsmen and their friends are now driving dull care away

Charles H. Totty, Madison, N. J.

New Lessee of the Florham Farms Greenhouses.

by attending excursions and outings. The Greek-American Retail Florists' Association will hold its annual outing at Witzel's Point View Grove, College Point, July 29. The steamer Isabel has been chartered and judging by the experience of last year, all comers will enjoy a pleasant day.

Christatos & Koster, retailers, have removed from 706 Madison avenue to a much larger store with a conservatory attached, just across the street from their old store. They have taken the whole building at their present location and will lease the upper floors.

F. Pollatcheck, the Lenox Cliff Florist of 1177 Third avenue, has recently executed a very elaborate window decoration in which a landscape scene is represented. It is a happy combination of realism and comedy and it is up to Oscar Hammerstein to beat it.

A policeman and a chauffeur have been arrested in connection with the theft of rhododendrons from the valuable Sage collection in Central park, and it is rumored that other persons are implicated.

The retail associations are whiling the happy hours away by boycotting a leading wholesale firm. The man who talks for this firm says, "We'll give them the fight of their lives."

James Coyle, of Froment's, has gone to the beach with his family for an extended vacation.

Arthur Hunt, of A. H. Langjahr's, left with his family July 11 for a two weeks' vacation in Sullivan county.

Traendly & Schenck, W. F. Sheridan and Henshaw & Fenrich are closing at 3 p. m. for July and August.

Charles Schenck of Traendly & Schenck is enjoying a vacation.

St. Louis.

TRADE DULL, STOCK POOR.

The very warm weather which we are now having helps if possible to make trade duller. The little stock now arriving shows plainly the effect of the intense heat, carnations arriving in many instances all shrivelled up. Good stock is at a premium and is sought after. White roses are scarce and in demand. Asters are now coming in more plentifully; some few single tuberoses are seen, sweet peas are at an end and gladioli are now in greater supply, light colors selling the best.

NOTES.

The Florists' Club held its monthly meeting last Thursday, 20 members present, W. C. Young, president, in the chair. The nomination of officers was the principal event. The following were nominated: For president, F. J. Fillmore, W. C. Young; for vice president, John Connon, Henry Kahrs; for secretary, J. J. Beneke; for treasurer, W. C. Smith. Three year term one trustee, F. H. Weber, A. J. Bentzen. The election will take place at the next meeting which will be held at the greenhouses of the Bentzen Floral Co. by invitation. It was announced that the club will have a special over the Big Four, leaving by night, chaperoned by W. C. Smith, for the convention. Also another special leaving by day, over the B. & O. chaperoned by F. H. Meinhardt. A communication was read from the Horticultural Society through its secretary, Otto G. Koenig, requesting the cooperation of the Florists'

Club in the getting up of the monster flower and fruit show to be given by the Horticultural Society in the new Coliseum building. J. J. Beneke moved that the club accept and donate $50 in special prizes to be given to local growers only or such out-of-town growers who are members of the Florists' Club.

Robt. J. Windler is having a good time; he is traveling north and visiting Canada. Jim Young, of Young & Sons, will shortly leave on a vacation for Atlantic City. Mrs. John Young, widow of the late John Young, has already left. Jim Arado, manager of the cut flower department of C. Young & Sons, has left for two weeks. Al Gumz, salesman at George Angermueller's, has left for two weeks. Max Rotter, from latest reports, is having a fine time in Germany. Miss Martha Hebbig, saleslady at Robert Windler's, will leave shortly. Mrs. Ellison left last week for Michigan resorts.

Regrets and sympathy are extended to the friends of Herbert Heller, of New Castle, Ind. He was a frequent visitor to this city and attended many of our flower shows as an exhibitor.

C. A. Kuehn has been getting some good prices for regular shipments of Amman's carnations, notwithstanding the slow market. J. F. must know how to put a finish on his pinks.

ROSES SCARCE.

The trade situation and demand are about as usual for the season of the year. There is an abundance of stock such as it is. Good roses are scarce, particularly white ones, the Bride being down and out with very light shipments of Kaiserin. Carnot and My Maryland, are the varieties that seem to defy the hot weather and very good stock of these kinds are seen. New crop American Beauty is offered in small quantities; the color is fine. Sweet peas are suffering from the drought as are all other outdoor flowers. The growers say rain is badly needed as many things are actually shriveling up and only a soaking rain will save them. Convention matters are uppermost in the minds of the craft and preparations for an elaborate display by the supply men and growers of this city are being perfected. This city is always a great factor in the trade exhibition and promises this season to outdo her former efforts. Large spaces have been engaged by H. A. Dreer Co., Robert Craig Co., Chas. Ball, Samuel Ball of the plant men and H. Bayersdorfer & Co., M. Rice & Co., The S. S. Pennock-Meehan Co. and Jos. G. Neidinger, will all be represented with extensive exhibits. From all indications there will be a large attendance of members of the society to this silver anniversary. The fare from here for the round trip will be about $27 net. The route has not as yet been decided, Chairman John Westcott and his committee not having made final arrangements.

In looking through an old copy of a bound edition of the Philadelphia Florist of the years 1852-3, a publication issued monthly, the first number of which is dated May, 1852, I find the following note of interest: "H. A. Dreer, 59 Chestnut street, has a neat garden and conservatory in Sixth street near Haverford road, Mantua village, where he cultivates choice flowers and greenhouse plants. He gives much attention to the supplying of choice bouquets, and has a good selection of flowers for that purpose." An advertisement taken from the Gardeners' Chronicle of England was published as an item of interest. "Wanted a gardener. A clergyman wants a sober industrious man, who understands greenhouse and usual garden work. He must be able to milk a cow, and to make himself generally useful, as no other help is kept regularly. He must be able to teach, and lead a band, and to sing in church. A young man of obliging disposition and good character will find a comfortable and constant place and his wages increased; but they will be but moderate at first, address postpaid, etc."

The sympathy of the trade goes out to Godfrey Aschmann in the death of his wife on Saturday last, July 10. The funeral, which occurred on Wednesday, was largely attended, the casket being surrounded by quantities of flowers sent by her many friends.

John Westcott and family are spending a few weeks' vacation at Waretown, where the fishing is now excellent. Many large catches have been made.

Wm. McKissick & Bros. are getting some fine My Maryland roses. Easter lilies are also seen here in quantity.

George Burton is sending in new crop American Beauty roses of fine quality to the Leo Niessen Co. K.

BANGOR, PA.—Samuel Stone is building an office at his greenhouses.

WOBURN, MASS.—John Newman is building a new greenhouse, 500 feet long.

Pittsburg.

TRADE KEEPING UP WELL.

Considering the usual state of the market in July, business is keeping up very nicely this month. Of course the outdoor stock is not here yet in quantities, enough to make the market feel as though it's all coming in and nothing going out. American Beauty roses are very poor, but as there is an abundance of lilies and gladioli no one cares. Asters are slowly making their appearance.

NOTES.

On the evening of July 9, Walter Breitenstein entertained a few of his florist friends at the Duquesne canoe club of which he is an enthusiastic member.

The employes of Randolph & McClements held a picnic in Highland park, Wednesday evening, July 7.

Henry Blind has moved his residence from West View to East Liberty.

Miss Geib of the McCallum Co., is away on her vacation.

M. F. Stafford left the employ of J. J. Fuchs, July 1. J.

GARDEN PARTY GIVEN BY MISS FORBES OF FORBES & DONAHEY, WHEELING, W. VA.

Boston.

CARNATIONS SCARCE.

The week has been uneventful. A fair demand for funeral work has been the only activity. This trade is well distributed through the city and suburbs which latter sections draw only lightly upon the local market for supplies at this season. The market has been thinned out perceptibly and relisting is being done. Carnations, which a week or two ago were being shown in splendid shape and in great quantities, have become very scarce. The growers have delayed their cleaning up season somewhat, but rapid strides are being made now to get in line with the fall stock. Satisfactory American Beauty roses are coming in and, as the demand is well maintained, prices have held solidly at reasonable figures ranging from $12.50 to $25 per 100. These roses represent the best value available as outside of Kaiserin there is scarcely anything good to be had. A number of growers are showing My Maryland for the first time and the new stock is looked upon with great favor. We hope that Richmond will display its old time form the coming season, otherwise we expect a better market for American Beauty, which no doubt the newer rose displaced for a time. The daily market is devoid of flowers of quality, a mass of all sorts of garden truck being held out to buyers who have but small choice in selections. Lily of the valley is improving slowly and a very fair product is now available. A few fine cattleyas are in and no difficulty is experienced in securing satisfactory returns.

NOTES.

W. T. Henderson of the Tremont street store of Thomas F. Galvin, Inc., is spending his two weeks in seeing the sights of Broadway and has included Coney Island in his itinerary. James M. Travers the "handsome" shipper of the same house is beaming over with mirth as during the week he was presented with a vigorous young son.

C. M. Robinson and Joseph Margolis, of the firm of H. M. Robinson & Co., are enjoying their vacations together, and are passing the time in fishing through the favorite resorts of New Hampshire. Meanwhile, Henry M., the head of the house, is spending every minute at his post directing the business.

Welch Bros. are handling an extra fine line of American Beauty, something which for quality is rarely equaled by July roses. The crop is an extensive proposition and seems amply able to support the local market for at least another month.

Wm. Glidden the popular uptown agent for J. A. Budlong & Co. is spending the next two weeks in well earned rest and has retired with his family to the Blue Hills. B.

ALLENTOWN, PA.—John Sykes will build a new greenhouse at his place at Tenth street, 20x130 feet.

RANDOLPH, VT.—H. M. Totman is carrying out extensive additions and alterations to his greenhouse.

JACKSONVILLE, FLA.—Giving notice that they would apply to the governor on August 9 for letters patent, C. D. Mills, C. L. Bragg, C. Leslie Whipp and W. W. Key have signified their intention of incorporating themselves into a company for the purpose of conducting a general florist, nursery, horticultural, pottery and real estate business. The name of the concern, which is really an incorporation of the present business of C. D. Mills, will be Mills, the Florist, and the main office of the company will be located at 36 West Forsyth street. It is stated that the authorized capital stock of the new concern will be $100,000, divided into 1,000 shares of the par value of $100 each. In the notice of the intention to apply for letters patent, it is set forth that the directors of the firm may issue preferred stock to an amount not exceeding $25,000.

STOCK AND BUSINESS POOR.

The torrid heat which, with an unprecedented rainfall, made an abnormal June, has given place to the usual drought, and, on the surface at least, things are parching. Gardens are at a standstill and outdoor blooms are almost completely lacking. A great army of people left the city for the Independence day celebration, and many will remain away for the balance of the summer, thus removing a large proportion of consumers and naturally the best spenders. What trade was offering, met a handicap in the scarcity of cut flowers. With conditions so unpropitious and so many houses pulled out it is almost impossible to get any stock of real quality, this holding good both of roses and carnations. Sweet peas are slacking up and so are lilies. A few asters are coming in, but they are inferior, as is to be expected. Some good gladioli are seen, but their use is limited and they are hard to sell.

NOTES.

John Cook, the veteran rosarian who has had so long a conflict with rheumatism, is gradually but slowly improving. Though he has not yet ventured into the city he is able at times to get about his beautiful place and look after his ever-increasing collection of hybridized roses and note the characteristics of the older and rarer crossings. He is delighted with the behavior of his garden rose, Radiance, which has been lovelier this season then ever before, the color being vivid, the fragrance delightful, and the stems equal to house-grown kinds. A new red, a cross of Etoile de France and one of his own seedlings, gives great promise. Mr. Cook is naturally much gratified with the reports which the papers contain of the success of his My Maryland and its adaptation to all sections of the country.

The abolition of board fences and the substitution of live hedges, with the inevitable result of more ornamental planting and more tasteful decoration of house yards, is spreading with enthusiasm. A community of eight families on one block of Linden avenue has taken down the line fences, substituting light iron fences, planting vines and flowers, so that a space of 80x120 feet is like one big garden, enjoyed equally by all; others are using the privet hedges, which are backed by a wire netting about three feet high, which keeps out dogs and other intruders. The spread of gardening taste, especially by the ladies, is marked and if the custom is generally adopted it will be wide-spread in its effects.

The State Horticultural Society will hold its midsummer meeting at Mountain Lake park, July 30 to August 2. This is an elevated section, a delightful place for such assemblages and convenient to the mountain fruit region, which will be visited by the members. Papers will be read and discussed, reports of officers received and a general good time enjoyed by all who attend the session.

John J. Perry, manager of the Florists' Exchange, has purchased some ground at Hamilton, one of the rapidly growing suburbs of our city, and will build a dwelling thereon.

Mrs. Egner, who has been for a year or two with E. A. Seidewitz in his Charles street store, has left his employ.

LENOX, MASS.—Ernest Marsh has completed his duties at the Elm Court greenhouses.

BRONXVILLE, N. Y.—A. G. Burtnett, formerly a florist here, died at his home July 5 at the age of 72.

GREEN LAKE, WASH.—A number of residents interested in beautifying the yards and gardens of the north end have suggested the holding of a dahlia and flower show by florists and gardeners. This year will be especially favorable for a large show of cactus dahlias as so many people have planted them. A great abundance of other flowers will probably be secured for exhibition and the flower show would be the means of encouraging the growing of flowers in the district. It is planned to hold the show some time in September.

DESIGNS OR CUT FLOWERS

THE ANDERSON FLORAL CO.
533 MARSHALL AVE.

Albany, N. Y.

Owing to the efforts of the committee appointed at the last meeting of the Albany Florists' Club the retail florists in the business section of the city and the growers have agreed to close their places of business on Saturdays during the summer at 12:30 p. m. and at 5:30 o'clock on week days.

John J. Berberick of 26 Second avenue is about to extend his store 15 feet toward the street line. The extension will give him two large show windows 8x8 feet and inside store dimensions of 18x25 feet. Mr. Berberick also contemplates building a new greenhouse 22x45 feet for spring plants and azaleas.

Among those in this vicinity who are engaged in putting up new houses is A. D. Carpenter of Cohoes, who is building a rose house 30x120 feet.

The summer lull has come.

R. D.

LANSING, MICH.—The Maplewood Violet & Nursery Co. have closed out their nursery business and will hereafter be known as the Maplewood Violet Co.

EMPORIA, KANS.—The Shanks Floral Co. after a successful year's business has recently moved into a new room which has been fitted up in the most modern style for its accommodation. At the opening, June 26, the store was crowded to the extent that it was necessary to close the doors and let the crowd pass out through a side entrance. The people here seem to know a good thing when they see it.

BAY CITY, MICH.—At the industrial parade, July 6, Boehringer Bros. had a fine floral display, surmounted by snow white doves, one driving a flock by means of pink ribbons held in her beak. This was awarded the first prize. The William Roethke Floral Co., for second prize had a beautiful bower in which sat a young woman playing a floral harp while around her were several prettily dressed little girls.

The Seed Trade.

American Seed Trade Association.

I. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D. C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, June, 1910.

BLUE GRASS is said to be firmer and prices from cleaners $1.25 to $1.35 for 21 pounds seed.

LILIUM HARRISII has arrived in New York in liberal quantities. Freesias are due to come next week.

MINNEAPOLIS, MINN.—Miss C. H. Lippincott, the pioneer seedswoman, has removed her business to Hudson, Wis.

LOMPOC, CALIF., reports lima beans, while suffering some from backsets, are making on the whole an excellent showing.

YOKOHAMA—The Japan Nursery Co., Ltd., and the Oriental Bulb Co. have combined, retaining the name first mentioned.

BEAN CROP prospects in Michigan are reported to be excellent. Prospects never better for a fine yield, but of course it is a long way yet to harvest time.

LOUISVILLE, KY.—Very hot weather following a rainy spell has burned onion set tops and the crop will not be a good one, perhaps not over 65 per cent.

C. W. SCOTT, of Vaughan's Seed Store, New York, passed through Chicago, July 8, on his way to his old home at Grand Rapids, Wis., on a vacation trip.

VAUGHAN'S SEED STORE is taking a couple of cases of lily bulbs off the Bermuda boat this week and passing a good lot on to Chicago and a part to Europe.

HOUSTON, TEX.—A new charter has been granted to the Reichardt & Schulte Co., the only change, however being the admission to the firm of E. H. Schulte. The old style of the firm was Reichardt & Schulte.

JOHN BODGER, of Gardena, Calif., who is at present in England with his wife, writes, June 27, that he had a rough passage, Mrs. Bodger being prostrated even after she arrived in England, but is now in perfect health. He is now at Burnham in Somersetshire, his old home county, and we publish on page 1283 an interesting letter from him.

ST. JOSEPH, MO.—The stock of the Missouri Valley Seed Co. has been sold to the Neudorff Hardware Co. and the Missouri Valley Co. has sent out a notice to the effect that it will not be responsible for any bills contracted by the latter firm after July 7.

MANITOWOC, WIS.—The M. G. Madson Seed Co. is growing a large acreage of the leading varieties of asters. The planting season was favorable but the dry weather since has hindered the progress of the plants somewhat. The prospects are, however, for a good average crop.

MOST California onion growers are likely to harvest good crops, only one or two having poor prospects at this time. Undoubtedly the forthcoming crop of onion sets and marketing of the same successfully or otherwise will have a good deal to do with the prices of onion seed of the yellow flat varieties the coming winter because if sets do not realize good prices the average onion set grower cannot afford to pay any fancy price for his seed.

CHICAGO.—Onion sets promise a good crop on the north side; they could use more showers; dry weather at this time would shorten the yield but improve the quality.—Contract prices on the board of trade July 14 for grass seed were noted as follows: Prime timothy, $3.85 (nominal); white clover, $16—J. J. Budlong and some of the office force have been on a vacation fishing trip on Lake Huron near Mackinac island. L. A. Budlong is to make it this week.

Wholesale Grass Seed Dealers' Association.

Deterioration of Types of Cabbage.

A paper read by J. M. Lupton, Mattituck, N. Y., at the convention of the American Seed Trade Association, Niagara Falls, Ont., June 22.

I assume that the seedsmen's convention can possess no greater element of usefulness to the trade than that which results from a better understanding of the nature and character of the plants which seed produces. I notice by the programme that the greater part of our information on the present occasion comes from scientific men and while feeling greatly honored at being given a place among the distinguished gentlemen who are teachers, I must disclaim being a teacher myself. In fact, I entered the freshman cabbage class in 1879 and after 30 years of reasonably patient study I have not yet graduated, and worse than all, I have a strong suspicion that I never shall; it is therefore as a student and not as a teacher that I shall briefly discuss some of the peculiarities of the cabbage field.

I do not think that varieties of cabbage are peculiarly subject to deterioration; during the period of my observations several varieties of potatoes have come and gone, but the Early Jersey Wakefield cabbage has been the popular early variety during all that period in spite of every effort to supplant it. Apparently those plants which we produce by sowing the seed are much less subject to deterioration than such a plant as the potato which we produce by planting the tuber, the reason to my mind being fully found in the natural constant hybridization which occurs at the flowering period among the seed producing plants. Now this constant hybridization, not the intermingling of different varieties with one another, but the intermingling of individual plants of the same variety, appears to me both as a means of deterioration and at the same time as an essential of life in its relationship to what we call types of cabbage.

We must recognize the fact that each plant is an individual—member of a variety though it be; each plant possesses a character of its own, a constitution of its own, and, seemingly, a disposition of its own. Some are healthy and strong, some unhealthy and weak, some well disposed and perfect types of the variety, others show vicious tendencies, and the seed produced from any given plant is, of course, hybridized through nature's process by the other plants which grow in its proximity. Without constant vigilance on the part of the grower this natural mixing of individual plants in the blossoming season becomes a menace and an element of deterioration, but the remedy is extremely simple and well known: We have only to discard the vicious specimens, a matter which depends for practical results far more on the discernment and intelligence of the man behind the hoe, than upon the number of plants removed from the field. Reproduced year after year without any particular care, permitting every plant to bear all the seed it naturally will and harvesting the whole product just as it will be reproduced with the natural process of mingling good and bad together, results in a rapid deterioration of the variety as measured by gardeners' standards.

The plants become wild, produce cabbages, but not cabbage heads, the plant, while seemingly it has gained in hardiness and vigor, and, in consequence, ability to resist disease, has apparently lost in its capacity to produce the head for which it is cultivated and which gives it its value; this at least seems to be a natural tendency and might be termed natural deterioration. On the other hand, the seed breeder seeking by the most patient and painstaking effort to improve his stocks in making his selection of stock seeds, has naturally in mind a given ideal of every variety. The plants which he selects for his planting stock, which of course form the basis of his strain, are those specimens which in every particular are the nearest approach to the ideal type he has in mind. Seedsmen in particular like to see all the plants grow just alike, but the effort of itself is to a certain extent an effort to destroy the vitality and individuality of the plant, which to my mind is an essential to the life of the

variety, and following too blindly the effort to make all grow to a given ideal is apt to result in a weakening of vitality and a lack of resistant force necessary to combat the plant's natural enemies and conditions unfavorable to its development.

Some time ago a seedsman wrote me that the year previous he had sold cabbage seed of a certain variety which had given excellent results and produced perfect crops, some of which he had seen. Carrying over some of the same seed, it was again planted, with an opposite result. Crops failed and in the view of the average planter it was an entirely different strain of seed from that which they had used the year before, though actually it was not only the same strain, but the same lot of seed. Why was this? Being familiar with the variety, I do not hesitate to say that the trouble was due to overbreeding or selection without proper regard to securing, as a first requisite, the greatest degree of hardiness and vigor in the parent stock; the grower's effort has been to make all the plants look just alike and in the effort he has weakened their constitution and natural force of resistance. Grown under favorable circumstances such a strain appears perfect, but let it be planted under adverse conditions and it cannot succeed, but easily succumbs to any disease to which the plant is subject. The effort therefore on the part of the grower to secure perfection must recognize as one of the elements of perfection a strong constitution, and any effort which fails to recognize the fact that each plant is an individual will probably end in failure.

We find therefore that while nature seems to have decreed that men may maintain the usefulness of a variety only by means of selection of parent stocks, she seems also to have ruled that such selection shall be made only in conformity with certain rules which she has established and written in the fields for close observers. In general it may be said that that color of the leaf gives a good indication of the healthfulness and vitality of the plant. I have particularly noticed that every strain bred to a point where vitality has weakened, has a smooth leaf in which a yellowish tinge has replaced the deeper shade which should indicate health and vigor. It is, I think, much easier to breed a smooth leaved variety to a given point than one which has a blistered or ruffled leaf; the tendency to variation is not so marked in the smooth leaved variety and its individuality not so strikingly shown.

Now, so far as both seed grower and seed dealer are concerned, we all have an identical interst: We all want the best seed we can possibly obtain at the lowest possible price. We do not want a strain which shows no effort at improvement, in which a natural wild growth predominates, even though that wild growth may indicate healthfulness and disease resisting power, nor do we want a type bred with so much singleness of purpose as to destroy its vitality. I fear that this convention will be unable to determine the actual limitations of men in that direction and that the actual solution of the problem in all its complexities will have to be left to a conference between the cabbage seed growers and cabbages in the fields next autumn.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary. Next meeting in Ashtabula, O., October 12, 1909.

THE annual meeting of the Greenhouse Vegetable Growers' and Market Gardeners' Association of America will be held at Ashtabula, O., October 12. Committees on programme and other matters have already been named, but the programme is not yet complete.

PLAINFIELD, CONN.—The severe drought is destroying corn and potatoes, causing apples to fall from the trees, drying up millstreams and pasture brooks. Oats are rusting badly and smaller vegetables are damaged greatly. All kinds of insects that thrive in hot weather are destroying foliage of fruit and shade trees.

Mulching.

One of the greatest aids to success is mulching. If we had plenty of material always at hand this would receive more attention. It is the scarcity of proper material at the right moment that has caused cultivators to depend mostly upon loosening up of the topsoil instead of mulching. The purpose is the same in either case. To apply a mulch may take more time than to loosen the soil, but a mulch properly applied will do for a season, while the cultivating process must be repeated again and again. There are a few other points to consider, fertility and cleanliness. A mulch generally will add plant food; also with many crops a mulch means a clean product. This latter point is of great importance with tomatoes. In localities exposed to high winds, vines such as cucumbers, melons and squashes are often badly damaged by being rolled into bunches. This can be entirely prevented by applying a coarse mulch just as the vines begin to run—the tendrils will cling to every straw and stick and securely hold the plant in place.

We have practiced a system of mulching that is quite a success. Land intended for early crops is completely prepared in the fall, and in the course of the winter covered heavily with coarse manure. Just as soon as we can in the spring this manure is raked into windrows, say 16 feet apart. The land is planted at once without plowing, and we generally find it in excellent condition. The windrows make excellent paths for the men to go back and forth to work or gather crops and when the early things are out of the way we have the mulching material at hand for the succession crop.

MARKETMAN.

Potato Drying in Germany.

Vice-Consul James L. A. Burrell, of Madgeburg, states that in order to cope with the overproduction of potatoes in Germany several potato-drying plants are operating in various sections. Such factories are increasing, due partly to the advancing prices of grain. To produce 1100 kilos or 220 pounds of dried potatoes 830 pounds of tubers are required, and the product is worth $3.80 to $4.30.

Early Cauliflowers.

One of the most delicately flavored of all the brassicas is the first early cauliflower of the season. Very frequently no such delicacy is seen until the end of June, and occasionally even July is reached before heads are sufficiently large for use, says the Gardeners' Magazine. The cauliflower has always been looked upon as a superior vegetable, and more especially so if it could be had before peas, early outdoor carrots, turnips, etc. For the past 12 years, whatever the climatic conditions may have been, we have always had a few cauliflowers from the open during the last week in May, and, commercially, have always had excellent returns all through June as the heads matured.

It is quite true, as so often stated, that good cauliflowers cannot be produced upon very poor soil, for unless growth is free during the early stages, with many of the smaller early selections premature hearting takes place, therefore it always pays to give a little extra attention in the matter of raising the plants and hardening them before planting in the open during early April. We have tried a good many varieties for early use, such as Snowball, Dwarf Erfurt, First Crop, French Frame, Early London, Magnum Bonum and others, and we have sowed seeds in every month from September to February, and have had the best results from mid-November sowings. Pans of ordinary soil from the garden answer well for sowing the seed in at that season, and quite cool treatment is essential. When the seedlings are making their first true leaf is a good time to prick them off into boxes, or cold frames, or to pot singly into 3-inch pots.

For a good crop of white, solid-hearted cauliflowers of either private or commercial value, we cannot find anything that equals Magnum Bonum, and always grow large quantities of it. The smaller First Crop section is more suited for the earliest use, and to have them good they must, in their early stages of growth, have nitrogenous stimulants in some form to encourage leaf growth, which is very scant in these small forms.

Lilium Harrisii, Now Ready for Delivery :: ::

Our first consignments have just reached us, and we are now filling early orders. **Easter comes very early next year, March 27th,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to purity and freedom from disease, and not the late type now so often furnished.

6- 7-in. bulbs, 350 to the case.....$ 6.00 per 100; $ 55.00 per 1000
7- 9-in. bulbs, 200 to the case..... 9.00 per 100; 85.00 per 1000
9-11-in. bulbs, 100 to the case..... 20.00 per 100; 180.00 per 1000

Full case lots at thousand rate.

Large Specimen Hydrangeas

In tubs and half-barrels. For July and August flowering.

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season; flowers are just beginning to show color. Extra fine plants in tubs, $3.00 each; very large specimens in half barrels, $5.00 and $7.50 each.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

A Californian in England.

ED. AMERICAN FLORIST:—

Since arriving here we have run around so much that I had no time to write before but we are now at Burnham where my wife is resting up and regaining strength after a very rough passage. We landed in Liverpool Whitsunday, went by special train to London and from there to Croydon. The season is extremely late here and very cold with rain and hail. Have to wear an overcoat every day, especially here by the seaside. Bedding out is very late and only just finished. Two weeks ago it was at its height near London. We arrived in good time to see the spring flowering trees and shrubs. In the country all the hedges were ablaze with the white hawthorn and the shrubberies with the double pink variety, laburnum, rhododendrons, etc. The latter at Kew Gardens, Crystal Palace and all large estates were grand. At Kew I noticed Hydrangea dentilla, a large white tinted pink species, deeply serrated, with the pips or individual flowers about two and one-half inches in diameter. This is the finest thing I have ever seen in hydrangeas. Another, H. hortensis Mariesi, was large with pink flowers over two inches in diameter, a native of Japan. Another very large variety, unnamed, was of the same size, with bluish purple flowers (not the old blue variety). Perhaps these are not new to you but they are quite new to me, the finest I have ever seen. There was a very fine saxifrage in one of the greenhouses, S. sarmentosa tricolor, from Japan and China; as its name implies, it is three colored, and very pretty for edging or hanging baskets.

The sweet peas are now beginning to flower. I want to rush our journey up through the north and return in time to be at the trial grounds of the Sweet Pea Society at Reading when they are in full bloom before the show, and will write you afterwards. We went to Wells last Tuesday and saw the prince and princess of Wales, who were assisting in the ceremonies of the cathedral, handing over to the Church of England the ruins of the old abbey at Glastonbury. It has been owned for several centuries by private people. I hear from home that you have been getting it hot but we have had no warm weather here and will be pleased to get a warm-up for we are shivering with the cold.

C. J. Brown, Rochester, N. Y., President; C. M. Hobbs Bridgeport, Ind., Vice-President; Geo. C. Seagar Rochester, N. Y. Sec'y. Thirty fifth annual convention to be held at St. Louis or Denver June 1910.

TWO promising new climbing roses are described and illustrated elsewhere in this issue.

FOR Ligustrum citrata in John Dunbar's notes on "Trees and Shrubs at Rochester" in the issue of July 10 read L. ciliata.

NAPA, CALIF.—Frederick N. Kahler, a prominent nurseryman, died here June 30 after a week's illness that so baffled the physician that a post mortem examination was held.

JERSEY CITY, N. J.—The exercises for the dedication of the Zabriskie playground with the formation of which John T. Withers has been closely identified, passed very successfully and this great gift of Cornelius Zabriskie is now open to the children. About 3,000 persons were present.

THE new 1909 Texas state law relating to the sale of nursery products, puts both a fine—not less than $100—and prison penalty not less than 30 days on any nurseryman, agent or stockholder in a nursery corporation, who shall knowingly make false representations of the name, quality or nature of any nursery product.

FRED L. ATKINS, of Bobbink & Atkins, Rutherford, N. J., his wife and a party of friends riding in their automobile, were run down by a party of speeders in Hackensack, N. J., July 11. Mr. and Mrs. Atkins and Mrs. Herrick, a member of their party, were thrown out of their car and Mrs. Herrick's collar bone was broken. Mr. and Mrs. Atkins though bruised, are not believed to be seriously hurt.

THE Georgia State Horticultural Society will hold its thirty-third annual session and exhibition of fruits, plants and vegetables in the auditorium of the Hotel Georgian, Athens, August 4-5, commencing at 10 a. m. each day. L. A. Berckmans, Augusta, is treasurer, J. B. Wight, secretary, and all particulars as to hotel rates and other matters can be obtained of them. The city and chamber of commerce are giving a barbecue and trolley ride and other courtesies are promised, besides the excellent programme of papers and essays to be read.

Wisconsin Inspection Laws.

ED. AMERICAN FLORIST:—

We are enclosing a copy of the nursery and orchard inspection law recently passed. You will note that one of the important changes is that all nurseries outside of the state doing business in this state must apply for a license at the cost of $10, at the same time submitting the proper credentials of an official nursery inspection. In addition to this, agents canvassing this state must obtain a duplicate copy of this license from this office at the cost of $1 each.

A. J. ROGERS, JR.

University of Wisconsin, Madison.

Trees and Shrubs at Rochester, N. Y.

The whin (Ulex Europæa) has a few late scattered flowers. We have to fuss with the whin quite a little to carry it through the winter. The dwarf whin-like shrub, Genista Hispanica, passed out of bloom about June 17. The small clusters of yellow flowers are quite attractive. On a dry, well drained soil, on a southern exposure, this is quite hardy here. The dyer's broom (G. tinctoria) is now coming in flower. The salt-tree (Halimodendron argenteum), with rosy purplish blossoms, was in bloom June 24. The American wistaria (W. speciosa), with lilac-purple flowers, is now in full bloom. The bastard indigo (Amorpha fruticosa), with its spikes of bluish purple flowers, was in full bloom June 25, and A. Tennesseensis, with very similar flowers, was past its best in bloom at the same date. The former has usually leaves with 9-17 leaflets, and the latter 17-27. In other respects they look much alike.

Berberis angulosa, from the Himalayas, with five to seven yellow flowered terminal clusters and the blossoms about one-half inch in diameter, came in flower June 22. This is the first time it has flowered here, as it requires much winter protection. The smoke tree (Rhus cotinus) is now producing its smoky looking clusters which have a highly ornamental and plumose appearance for a long time. R. cotinoides was in full bloom June 25, and has flowers similar to the former, but does not produce nearly as good an effect.

A number of species of rose are now in bloom; amongst some of them are R. ferruginea, with small pinkish red flowers; R. scabrata, with large blush pink blossoms; R. macrantha, with large showy pale pink flowers and prominent yellow anthers. R. Virginiana (blanda), with flowers from pink to blush white and which has been in bloom for two weeks. R. nitida, with flowers deep pinkish red and deep green leaves. R. multiflora, with its showy white racemes, is highly ornamental. R. arvensis, with creeping stems and handsome white flowers two inches across, is now in full bloom. R. humilis and R. lucida, with its pure white variety, are now coming in bloom. R. Arnoldiana, a garden hybrid with very showy bright crimson flowers, has been in bloom for a week.

Andrachne phyllanthoides, a euphorbiaceous shrub, with small inconspicuous greenish yellow flowers, was in full bloom June 24. Enonymus Sieboldianus, E. Hamiltonianus, E. alatus, E. verrucosus, E. augustifolus, E. latifolus and E. radicans, were in varying stages of bloom June 20, and the flowers of all of them are more or less inconspicuous. Helwingia Japonica is a low growing shrub from Japan, and the strange inconspicuous small flowers might be described as morphological curiosities. The flowers are produced off the midribs on the upper sides of the leaves, and are certainly very interesting flowering phenomena.

JOHN DUNBAR.

Nitrate of Soda for Roses.

ED. AMERICAN FLORIST:—

I am looking for information respecting the use of nitrate of soda on roses outdoors and shall be glad of any help you can give me along this line. K.

Seattle, Wash.

Nitrate of soda is by no means a perfect manure for roses, though there are times when it may be useful. When the soil is in good condition from a manurial standpoint the effect of the nitrate is to hasten the action of other manures—to "draw" the soil, as it is termed by growers. It is more of a stimulant than a food and if used to any extent on roses or other crops growing on poor soil would have the effect eventually of making the soil still poorer unless other manures were applied containing potash and phosphates. For instance if roses are from some cause or another not making good progress the application of about eight ounces of nitrate of soda to the square yard in three applications, watered in, would stimulate the growth. But this would have to be followed by a mulch of good manure or waterings with liquid manure. Soils well enriched with cow manure

EUONYMUS SIEBOLDIANUS AT HIGHLAND PARK, ROCHESTER, N. Y.

are the best for roses and heavy soils are better than light, while the principal use of the nitrate on such soils, beyond a slight manurial value, will be to stimulate or hasten the growth. It is not by any means a perfect plant food, especially for plants of a woody texture. It is a fine stimulant for soft and watery crops like cabbages or turnips. G.

Chionanthus Retusus.

It is curious that more fine examples of this ornamental shrub are not met with, considering that it was described by Lindley and Paxton in their "Flower Garden," vol. iii, p. 85, Fig. 273, in 1852, and that some considerable attention was directed to its merits about that time. It is closely allied to the North American fringe tree (C. Virginica), and is one of the many beautiful Chinese shrubs that owe their introduction to the travels of Robert Fortune. This particular shrub was found by him in a garden in the neighborhood of Foochow, and he sent it home to Standish & Noble, who were responsible for its introduction to commerce in England about 1850.

Fortune did not find it in a wild state, and he surmised that it had either been introduced to the place where he discovered it from a more northern part of the empire, or from Japan. Later collectors have, however, found it wild in both countries. It is a strong-growing bush, with large, more or less ovate, or obovate, hairy, deciduous leaves, and snow-white, fragrant flowers, which appear during the latter part of May and early June, in slender, terminal panicles. It is not an easy plant to propagate, except by means of seeds, though it will root from layers. It has also been increased by grafting on to allied genera, such as olea and ligustrum. Ordinary loamy soil suits it, and when once established it grows fairly rapidly. It has also been known under the name of C. Chinensis, a name given by Maximowicz.—Gardeners' Magazine.

What is Cutch.

"The other day down there at Washington, where the solons are wrestling with the tariff," remarked a man who wrestles with it in the cost of living, "somebody mentioned 'cutch' as an item that should have its share of the expenses to pay. Maybe it would have got by unnoticed as other items have, but the word had a funny sound and the newspaper squibbers took hold of it and began to cutch from one end of the press works to the other till everybody had heard of cutch, though most of them didn't know what it was. Neither did I, and thinking it might be something to eat and I might get it cheaper than other breakfast foods I was paying tariff on, I looked it up. It belonged to the vegetable kingdom all right, but it was not an edible.

"It is made from the bark of mangrove trees growing in Borneo and in India and is used in tanning leather, also for dyeing textile fabrics black or brown. The bark is subjected to treatment which extracts the tanning in the form of cutch, a hard, brittle brown substance with a shining surface like anthracite coal or lignite. In India the whole tree is chopped into bits and boiled down into a sort of cutch tar. After this has cooled in moulds it is made into hard balls, wrapped in leaves and shipped.

"In Borneo the wood of the tree is saved for fuel, much of it being shipped to Hong Kong and used in steam making, it having about 65 per cent of the heating properties of Welsh coal. There are thousands of acres of mangrove swamps in North Borneo, and when our oak and hemlock are gone we will begin to know a good deal more about cutch than we do now. At least we will know that it is not a breakfast food and we will also know that it will stay on the tariff list as long as there is any cutch competition in this glorious land of freedom."—New York Herald.

100,000 PEONIES For Fall Delivery

All of the Leading Varieties from the COTTAGE GARDENS' FAMOUS COLLECTION.

Our enormous stock enables us to send out tubers of the very highest quality, and in filling orders we use undivided roots only—assuring an abundance of flowers the first season. This year we offer 1, 2 and 3-year plants.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

Shot With a Weed Puller.

Mrs. Mary Gibbons, 3803 West Sixty-second place, Chicago, has been arrested on charges preferred by Martin MacVeagh, a mail carrier, who said she threatened to shoot him with a revolver. It was shown in court that the revolver was a weed puller.

At New York.

The annual outing of the employes of Vaughan's Seed Store and their friends will take place at Bamberger's Park, Eltingville, Staten Island, on Saturday, August 7. Dancing, bowling, baseball and other games and amusements will be the features and a general good time is expected.

The third annual outing of the New York Cut Flower Exchange will be held on Saturday, July 31, at Witzel's Point View Grove.

At St. Louis.

Everything is announced as ready for the picnic on July 21; enough ads have been procured in the programme to pay all expenses. The ball game between the Bentzen team and the Young team is expected to be a great affair. Young's team expect a walk over, and are giving odds on the result.

Primroses

	Per 100

SMILAX and SPRENGERI

From small pots. Specially grown.
Samples sent on request.
$1.50 per 100; $15.00 per 1000.

One bet of 2 to 1 was made by a very enthusiastic follower of the Young team that they would make more runs in one inning than the Bentzen team would make in nine. W. F.

At Chicago.

The bowling at Bensinger's last Friday evening resolved itself into a match game between the five high average men captained by George Asmus and the next five with Ed. Winterson at their head who received a handicap of 50 pins the first game, 75 pins the second and 100 pins in the third. The prospective convention pin artists cleaned up two out of three, and also increased their lead in the averages which are as follows: J. Zech, 179 13/15; A. Zech, 170 12/18; V. Bergman, 169 12/18; G. Asmus, 167; T. C. Yarnall, 152 5/18; W. Graff, 152; E. Winterson, 149 8/9; W. Wolf, 148 7/9; F. Ayres, 148 9/18; F. Pasternik, 146 8/18. The score:

A. Zech	144	183	163
G. Asmus	159	148	133
T. C. Yarnall	189	122	198
V. Bergman	243	176	152

GEO. WITTBOLD CO., 1657 Buckingham Place, Chicago.

will be held as far away from a greenhouse as it is possible to get as on this day everyone wants to forget that such a thing as a flower, from a commercial standpoint, exists.

The committees in charge of the events have worked hard and faithfully to make this picnic one to be remembered and the outlook now is that there will be the largest crowd that has ever attended one of these events. The selection of Riverview picnic grove was an especially happy one as the grove contains a baseball diamond, grandstand and running track and the river close by with boats at the disposal of the picnickers. Tiring of the grove the tickets of admission open the gates of Riverview park to all who care to avail themselves of the legion of amusement features which it contains. It will therefore be seen that there will be absolutely no chance for ennui (whatever that is) to mar the festivities. The rival baseball teams will line up as follows:

Wholesalers.		Retailers.
Tribble	right field	Pasternik
Lazaroff	center field	Enders
Farley	left field	Wolf
Heidleberg	third base	Kreitling
Goerisch	shortstop	Graff
Straus	second base	Lieberman

Carnation Plants

Free from disease. I doubt if there is another grower who has carnation plants to equal these. Following is the list ready for immediate shipment:

Enchantress. Rose Pink Enchantress, White Enchantress, Bountiful, White Lawson. Pink Lawson, Victory, Harlowarden, Patten. Perfection.

Price, $6.00 per 100. Cash with order.

HOWARD P. KLEINHANS, Easton, Pa.

Sidelights.

There was nothing particular about him, except his sterling honesty, that would indicate the "captain of industry," but he had an engaging smile and a smooth and convincing way of talking and he SAID he was honest and would pay his bills, and besides he only wanted about $50 worth of flowers—and he got them—not only from one house but from many. And then he got more, and MORE, and MORE. And pretty soon he was a regular customer. After many days the market wanted its money. He settled for 10 cents on the dollar. After many days he appeared again, and because of his honesty in settling at 10 per cent he secured a nice line of credit, opened up on the south side and undersold his competitors, because his stock did not cost him very much and every thing he took in was velvet. His next appearance is awaited with interest. He should arrive in a touring car.

* * *

This is the story of the wise grower who was on to their little game and would sell them only for cash. They got into everybody good and strong—so strong that some of the producers were afraid to quit, afraid should they put on the brakes that they would realize nothing; and the bills ran up into the thousands. They tried to get on the wise grower's books but there was nothing doing. He smiled while his foolish brethren sweat blood. And then happened the miracle. Somebody died and left them a few hundred thousand. They settled with everyone in full and the wise grower cannot sell them even a split carnation. The moral of this story is that you can never tell.

ROME, N. Y.—The Elm street greenhouses built by Edward J. Byam, and conducted by him the last eight years, have been leased by Mr. Byam to Edward H. Kipp and Wm. H. Edwards of Ossining for a term of five years. Mr. Kipp has been in the employ of the F. R. Pierson Co. and Mr. Edwards is the teller of the Ossining national bank. Mr. Kipp has resigned his position and arrived here July 1 and took possession of the business.

BUSINESS INERT.

Business continues about the same; summer lassitude and inertness is seen on every hand. As many of the retailers do not have ice in the summer, owing to the high price to which the ice trust has boosted this commodity, they buy only for orders, carrying nothing in stock to speak of. Carnations are going fast and will soon be out altogether. Asters are expected in quantity this week. Owing to the drought prevailing in the northern part of the state since June 27, growers had to water their outside stock, especially sweet peas, and on account of their being so cheap some growers questioned the advisability of this extra expense. Shasta daisies were in good demand the past week, and stock was of excellent quality. Water lilies still find a fair market; pink and white roses are also in good demand. A fine lot of cold storage Lilium candidum has been on the market lately; there are also a fine lot of white peonies still to be had.

NOTES.

Knoble Bros. are still advertising their $1 boxes of flowers; they say they are the goods. This firm closes at noon Sundays.

G. G. Stehn has moved his household to the suite above his store, cor. of W. Fourteenth and Auburn avenue.

Kirschners report a lot of funeral work. Water lilies have been used extensively also sweet peas.

Henry Taylor is sending in a fine lot of sweet peas from his Miles avenue place.

Wm. A. Smith, Robinwood avenue, has been cutting exceptionally good Shasta daisies.

C. C. Beingesser of Lorain, and family spent Sunday with friends here.

D. R. White of Sandusky, and his son were visitors on Saturday.

C. B.

VACATIONS IN ORDER.

Summer quietness in every sense of the word is with us. The month of June ended with good business leaving all satisfied I believe with the spring trade and willing to abide by the spasmodic trade that may come to them. Vacations are now in order; each store has from one to two away all the time and will do so until all have had their vacation. After many year of solicitation without results by the employes of the different stores to have evenings off during July and August, this year the proprietors without any exception on Main street agreed to close at 6:30 evenings including Saturday during July and August. To say that the employes are grateful would be putting it mildly and I think that when the year ends and a balance is struck no store will feel the poorer for the three hours given during the two dull months when consideration is taken of all the evenings put in during the rest of the year not counting holidays and the occasional all night session.

NOTES.

Joseph Streit, foreman for S. A. Anderson at his greenhouse, with Mrs. Streit left on Saturday last for Germany to be gone for six weeks. On Thursday evening everyone from the store repaired to the greenhouse and bid Joe a happy farewell. Lunch was served and after the cigars were lighted Joe was presented with a traveling case from S. A. Anderson and the employes with the wish that his trip would be so pleasant and enjoyable that continual use could be made of the comb, brush and mirror to make himself the envy of all on board.

There was a well attended meeting of the Florists' Club on Tuesday evening. Considerable business of importance was transacted and plans were laid out for August, September and October meetings when papers will be read by Wm. Legg, W. A. Adams and President Slattery. The date was about definitely set for the annual outing which will be held July 28. W. H. Grever is chairman of the committee.

Schoenhut the William street retailer has bought an automobile for delivery purposes making three now in use by the florists, Palmer and Stafford being the others. More are negotiating.

The farmers and growers are suffering for want of rain and flowers from outdoors show the need of a downpour.

W. H. Sievers of Genesee street leaves this month for Europe.

W. J. Palmer expects to leave for a fishing trip next week.

NEPHROLEPIS SCHOLZELI

The New Crested Scotti Fern

This crested sport of Scotti has proven all that has been claimed for it, and it promises to become even more popular that its parent.

It is, without a doubt, the ideal crested fern: a good quick grower, and makes a salable plant in any size from a 3-inch pot to a large specimen. A profitable fern for every body. Awarded the following honors:

Shaw Gold Medal, St. Louis Horticultural Society, Nov. 3, 1908, for best plant of decided merit for cultivation, not previously an article of North American commerce.

Silver Medal, Offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3, 1908, for the most meritorious plant or flower of American origin.

Certificate of Merit, Of the Horticultural Society of St. Louis, November 3, 1908.

Silver Medal, Pennsylvania Horticultural Society, Philadelphia November 10, 1908, for best new plant exhibited.

Certificate of Merit, Massachusetts Horticultural Society Boston, November 6, 1908.

Certificate of Merit. Dutchess County Horticultural Society, Poughkeepsie, N. Y., October 30, 1908.

Certificate of Merit. Morris County Gardeners' and Florists' Society, Madison, N. J., October 30, 1908.

Certificate of Merit, Chestnut Hill Horticultural Society, Philadelphia, Pa., November 4, 1908.

Certificate of Merit, American Institute, New York City, November 12, 1908.

Certificate of Merit, Germantown Horticultural Society, Germantown, Philadelphia, Pa., November 9, 1908.

Certificate of Merit, Horticultural Society of New York, November 18, 1908, for distinct new variety of merit.

Bronze Medal, International Horticultural Exhibition, Berlin, Germany, April 2, 1909.

We offer for immediate delivery, nice strong plants from 2¼-in pots, At **$3.50** per dozen; **$25.00** per 100; **$200.00** per 1000. 25 supplied at 100 rates; 500 supplied at 1000 rates.

HENRY A. DREER, Inc.,
714 Chestnut St., - PHILADELPHIA, PA.

Davenport, Ia.

The July monthly meeting of the Tri-City Florists' Club was in the nature of a surprise party on Robt. Grafengeter and wife, and was a post-nuptial event, Mr. and Mrs. Grafengeter having been married in May. The club presented the couple with a handsome mahogany rocking chair, the presentation speech being made by the worthy president Emil O. Boehm. During the business session the picnic committee reported everything in readiness for the annual picnic to be held at Walnut Grove, Moline, Ill., on July 15 and the event promises to be the biggest of the season. The topic for the evening's discussion was "The Advisability of State Control of the Planting of Trees and Shrubs on the Public Highways." Discussion led by Emil Boehm, superintendent of parks. After the business meeting adjourned the club was invited into the dining room where a fine supper was in waiting, to which the guests did ample justice, and all voted Mrs. Grafengeter worthy to be the wife of a good florist. During the supper Mrs. Grafengeter favored the guests with selections on the piano.

The Fourth of July is the florists' only legal holiday when he is not rushed to death. It was very cold and rainy. Many overcoats were worn, and all plans for a glorious Fourth were declared off.

Now then, boys, don't forget our annual picnic; bring the wives and sweethearts and all the little ones, we want our holiday to be brim full of all good things and one you'll not forget.

Roses and chrysanthemums are all planted and looking fine. Carnations in the field are doing well, thanks to the numerous showers.

Visitor: Wesley Green, Des Moines.

T. E.

KAYSVILLE, UTAH.—Articles of incorporation were filed June 29 by the Gleason & Clark Co., which is organized to carry on a general nursery, fruit and vegetable business. The capital is $10,000. The officers are: F. E. Clark, Logan, president; H. C. Clark, vice president and general manager; Sumner Gleason, secretary and treasurer, these persons also forming the directorate.

What Shall I Fill My Empty Houses with Now?

WHAT WILL PAY THE BEST?

Is the cry all over. Use good judgment. I tell you what. ☞ Listen to me. You will never go wrong by devoting a reasonable space to **Araucaria Excelsa, Robusta Compacta** and **Excelsa Glauca, Kentias, Palms,** etc., while they are cheap. They will grow into money for you while you are asleep. Every florist knows **the Araucaria King, GODFREY ASCHMANN, of Philadelphia.** Look at what bargains he offers you in this advertisement:

THE ARAUCARIAS.

We are the largest importers of these so well known beautiful evergreen decorative plants. **Araucaria Robusta Compacta, Glauca and Excelsa.** ☞ Florists, bear in mind there is no garden lawn or porch, etc., in the summer that is complete without the Araucarias; therefore if you want to make money, ☞ Recommend your customers to buy an Araucaria. Any variety will do to introduce this so valuable plant to your customer friends. ☞ Look! We make you special prices:

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50 $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3-4-5 year old 5-6-7 tiers, 6-in. pots, 20-25 30-35 in. high 75c, $1.00, $1.25, $1.50 each. Smallest size, new importation 2 to 3 years old, 5½ to 6 in. pots, 40c, 50c, 60c and 75c. Can meet all applications.

Araucaria Robusta Compacta and **Excelsa Glauca,** April, 1909 importation, 6-in pots, 2-3-4 tiers, 3 years old, 12 to 20 in. high, $1.00, $1.25, $1.50 each.

Kentia Forsteriana, made up 8-in. pots, one large, 45 to 48 in. high, in center, three smaller ones around, $4.00; single 6-7 in. pots, from 20 to 48 in. high, 75c, $1.00, 1.25, $1.50, $2.00, $2.50 to $3.00 each.

Kentia Belmoreana, 6-in. pots, 25 to 30 in. high, 5-6 good leaves, 3 to 4 years old, 75c, $1.00, $1.25 to $1.50; 4-in. pots, 18 to 20 in. high, 25c to 30c.

Begonia Gloire de Lorraine. Our special strains introduced last Christmas, are well known in the florist trade. We have both the deep pink and the light pink varieties, 4-in. pots, 30c.

Sago Palms or Cycas Revoluta, 5, 6, 7 and 8 in. pots, 5 to 20 leaves to a pot. Price, 10c per leaf.

Ficus Elastica, or Rubbers, 5¼-5½-6 in. pots, 25c, 35c to 50c.

Adiantum Hybridum, large plants, fit for 7-8 in pots, suitable for cutting, 35c, 40c and 50c.

Areca Lutescens, 4-in., made up of three plants, 20c.

Cocos Weddelliana, 3-in., 15c to 18c; 3½-in., 20c to 25c.

Ferns for Dishes, a good assortment, 2½-in., $3.00 per 100.

Asparagus Plumosus, 2½ in., $25.00 per 1000, $3.00 per 100; 3-in., $4.00 per 100.

Cosmos, four best early varieties, made up, three plants in a pot, $4.00 per 100.

Asters, Victoria, German, 5 best sorts, $3.00 per 100.

Jerusalem Cherries or Solanum Multiflorum, the new improved varieties; with large berries, 2½ in. pots, $5.00 per 100.

Zinnia Elegans. 2½ in. pots, in bloom, mostly white, valuable for cut flowers, $5.00 per 100.

Cannas, all sorts, and **Scarlet Sage,** 4-in., $5.00 per 100.

Please state if in or out of pots.

All goods must travel at purchaser's risk only. Cash with order, please.

If You Do Not Find What You Need in Our Ready Reference Department, Write Us About It

MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY. Easy to apply.

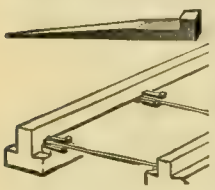
THE BEST WAY

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine Street, NEW YORK,

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.



Siebert's Zinc Glazing Points.

Good for small or large glass, do not rust, easy to drive 5/8 and 7/8 inch. Per lb. 40c. 5-lbs. $1.85. 20-lbs. $7.00.

VAUGHAN'S SEED STORE
Chicago or New York

Cedar Falls, Ia.

Joseph Bancroft and his wife were honored July 5 by the presence at their hospitable home of about 175 friends and neighbors, mostly those who have lived in this city or vicinity for many years. All came with gladness in their hearts to extend congratulations to the couple who on July 4 passed the sixtieth milestone in their matrimonial journey.

The health and strength with which they are possessed indicates that the years have dealt kindly with them and their love and abiding trust, not only in each other, but in all of their friends have given them more than the usual number of friends, all of whom were happy to take them by the hand and speak the words of affection and admiration which the occasion prompted. In dispensing the hospitalities of the day they were ably assisted by their children. Their sons, J. W. and George Bancroft, and their wives assisted throughout the rooms, which were made attractive with choice flowers and pot plants. Festoons of smilax were draped over the dining room table and tied with red, white and blue ribbons, while flags were everywhere in evidence.

There was some joking as to how it happened that an English couple were married in England on July 4, the great American holiday. Souvenir cards of white with gold figures marking the dates, 1849-1909, with a white rose tied with white ribbons, were presented each guest and every one inscribed his name in the pretty guest book, 1849-1909, which will afford pleasure in the years that are to come. The bride of 60 summers was radiant with happiness and delighted in showing many of the treasures that she had brought with her from her native country; the silver and china that had been donated on their wedding day were on exhibition and much of the local and personal history of this locality was reviewed by the assemblage of old time neighbors and friends.

To the man who needs a Boiler

THE KROESCHELL BOILER

was installed to heat over six million (6,000,000) square feet of glass during the past three years.

Expressions from the Men Who Know:

Used steam: was advised to change to your hot water boiler. Find it about half the work with your boiler. We would have no other.
STERNITZKE BROS., Park Ridge, Ill.

Have handled many greenhouse boilers of other makes but Kroeschell beats them all. I get perfect circulation in 30 minutes.
WM. OTTO, Oshkosh, Wis.

Former boiler, 16 horse power steam; as much difference as between day and night. Your boiler does not need recommendation. Will recommend itself wherever used.
THEO. F. DAMEROW, Grosse Pointe Mich

Your boiler, in our estimation, is the best in use today. We have two of them.
POTTER & SONS, Waukegan, Ill.

When we rebuilt our plant we were undecided whether to use your boiler or a cast iron boiler We are satisfied we made no mistake in using Kroeschell.
YEATMAN & WAY, Kennett Square, Pa.

Have fired greenhouse boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast iron boilers for me. I came very close to freezing out in both instances. G. M. THOST, De Soto, Mo.

The Kroeschell Generator

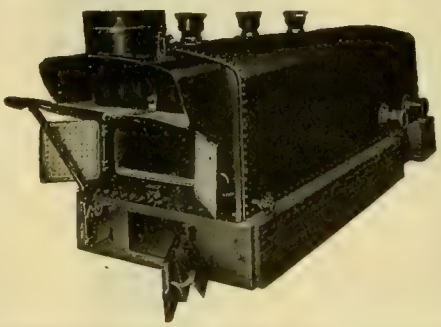
prevents boiling over, cures sluggish circulation, saves fuel, smaller mains can be used, water can be heated to 240° without boiling, increases circulation, 3 to 5 times faster; no hot water system complete without it.

HAVE YOU EVER INVESTIGATED

the one sure thing

KROESCHELL BOILERS

See the simplicity of construction. Plate material, **NOT CAST IRON.** Long fire travel, thin water ways. **The best and the most heating surface in the world for the money.**



THE KROESCHELL BOILER will give you more heat with the same piping required by other boilers, and with less fuel.

Send for our catalogue.

KROESCHELL BROS CO.

45 Erie St., CHICAGO.

THE KROESCHELL BOILER

replaced 1,346 cast iron boilers in 1905, 1906, 1907 and many in 1908.

Expressions from the Men Who Know:

We are very well pleased with your boiler. I have had fourteen years' experience in heating, six with gravity steam and eight with vacuum but give me the hot water system for all purposes. Use me for references any time.
E. LIGHTHISER & SON, Xenia, O.

Have used upright boilers, tubular boilers and cast iron boilers. Your boiler heats up better and easier than any boiler we have ever had anothing to do with. If we ever buy another boiler, it will certainly be a Kroeschell. POOLE & PURLLANT, Washington C. H., O.

I have fired boilers both here and in Europe for the last forty years. The Kroeschell is the best type of boiler I have ever used. I have two cast iron boilers, also a locomotive boiler, coupled with yours, but did not need to use the cast iron boilers this winter. Your No. 7 boiler is rated at 15 000 sq ft. of glass and carries 25.000 sq. ft. of glass until the outside temperature goes down to 10° of frost We have no trouble to keep temperatures in our houses with easy firing since we installed your boiler. The main flows and returns are heating our potting shed and packing room which are not included in the amount of square feet of glass. From the boiler to the farthest end of our violet houses and return is 800 ft. and circulates very quickly.
THE SALTFORD FLOWER SHOP,
Wm. D. Saltford, Pres
Poughkeepsie, N. Y.

THE KROESCHELL PIPING SYSTEM

is being installed by many progressive florists. $1\frac{1}{4}$, $1\frac{1}{2}$ or 2-in. threaded pipe, or 4-in. tubing, is used. Boiler can be set on level with greenhouse walks. You do not need deep boiler pits.

Manchester, Mass.

The North Shore Horticultural Society gave its first rose show June 31 and a magnificent exhibition of roses, herbaceous plants, fruits and vegetables was the result of its labors. Mrs. James McMillan (F. F. Brosch, gardener) showed some 40 varieties of roses and 15 varieties of sweet peas, taking first prize on each for the best collections.

There was a splendid collection of garden grown roses, 3 blooms each variety, the prize being the Eagle Head silver cup, and was won by Wm. Swan. Hon. T. Jefferson Coolidge (Wm. Till, gardener) had a collection of roses, one of the finest in variety and color. Mrs. George E. Cabot (Patrick Corrigan, gardener) secured the gold medal for best table, showing a fine collection of hybrid tea, perpetual and rambler roses. For the best table arranged for effect Mrs. H. L. Higginson (James Scott, gardener) was awarded a gold medal.

The first prize for best display of hardy perennials went to Mrs. H. L. Higginson. A silver cup offered by the Blue Hill Nurseries for best collection of hardy perennials was awarded to Wm. Swan, who also won a silver cup for best group of flowering plants. Mr. Swan also took the Highwood silver cup for best collection of delphiniums and becomes its owner, having won it two years in succession. Geo. R. White (Frank Gavin, gardener) also had a fine show of these flowers. A magnificent group of foliage and flowering plants, a mound ten feet high, was shown by Mrs. Lester Leland and won a silver cup.

The Blue Hill Nurseries took the society's gold medal for best collection of hardy herbaceous flowers. A new crested Scottl fern was shown by H. A. Dreer Co., and Julius Roehrs Co. of Rutherford, N. J., made a splendid display of orchids. They were given a certificate. There were two tables of wild flowers by children, Hammond Tracy taking first prize and Donald Crafts second.

CAMBRIDGE, MASS.—While he is erecting a building for his business John McKenzie will conduct it from his greenhouses, which are located on Whittemore street, North Cambridge Junction.

Drought in New Jersey.

According to reports received by the State Board of Agriculture and the statement of Francis B. Lee, of Trenton, N. J., who has just returned from a trip to nearly every county, New Jersey is fast drying up in one of the worst droughts that has been known for years. Unless there is rain within a few days there will be great loss and suffering. There has been no general rain for six weeks, and the few local showers that have fallen have brought little relief.

Mr. Lee cites as a result of the drought the burning this week of three hundred acres of cranberry bogs, valued at $30,000, belonging to Joseph White, of Hanover, Burlington county. In an ordinary season these bogs would be so wet that there would be no possibility of fire in them.

Swamp huckleberries will hardly show half a crop. All farm crops are suffering. Blackberries, raspberries and potatoes are drying up, field corn is stunted and all vegetables are so backward that merchants are raising prices. In many places hay is selling at the winter price of from $18 to $20 per ton. Peaches, apples and other fruits are suffering, and tomatoes for canning will be scarce. Wells are giving out.

CEMENT POSTS
For Your Benches.

Indianapolis.

CARNATIONS SCARCE.

Business was exceptionally slow during the past week. The retailers have had time hanging heavily on their hands and those who attended the market also complained of the lull in trade. Carnations are becoming quite scarce and the price naturally is advancing. Asters made their first appearance on the Saturday market. A good crop of this flower is promised by the local growers. Sweet peas are in great plenty now but do not move well in the stores.

NOTES.

The Indianapolis Plant & Flower Co. (Hasselmann's) has over 50,000 carnations in the field. Even though all of them appear to be in the best of condition, Mr. Hasselmann says that he expects to bring in only about a third of the best ones the middle of August.

The State Florists' Association had a meeting scheduled for last Wednesday in the horticultural room of the state house, but as only three of the members put in an appearance there was not the necessary quorum for the transaction of business.

W. W. Woolen, a lawyer by profession and practice, and a grower for recreation and pastime, is enthusiastic over the prospects of his gladioli and dahlias. He has several acres of each at his rustic and picturesque place called "Crow's Nest."

August Grande, who has been suffering with an attack of asthma, is now able to be outdoors, although as yet he has not been able to resume his business activities.

A. J. Pittett, a grower in the vicinity of Riverside park, is completing his second house, 30x200 feet. He expects to grow roses and carnations in this new structure.

Al Ruble, of Maywood, has completed another greenhouse in which he intends to grow carnations exclusively.

George Wiegand, of the firm A. Wiegand & Sons, met with a Fourth of July accident to his nose and has been wearing same in a sling ever since.

Mrs. E. A. Nelson is reported to be convalescent after a three weeks' illness.

A. W. B.

WESTFIELD, N. J.—Chas. Doerrer is erecting a 33x150-foot steel greenhouse for general stock. A new Kroeschell boiler will be installed.

We can supply in any size or length and in carloads or any quantity

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR PLANT GROWERS.

Hydrangeas.

The earliest rooted hydrangeas will be nice plants now and in order to properly harden up the growth they should go outdoors under a light shade. Plunge the pots in ashes or some other loose material and spray the leaves regularly; a lath house is an excellent place for them. Older plants that were cut back after flowering will probably need a little longer growth but very soon now the shoots on all the plants will be finishing, the buds will appear in the ends of them and all that is necessary is to prepare them by degrees for their winter's rest. Upon thorough ripening of the wood and keeping them from exciting conditions from now on a good deal depends.

Crotons.

We often see crotons growing in shady houses and frames, but this is not the place for them. If the proper amount of atmospheric moisture is kept up at all times and the plants well looked after for root moisture then it is almost impossible for them to have too much sun. The buoyant atmosphere that is caused by the sun striking surfaces such as floors and benches kept constantly moist is that which suits these heat and light loving subjects and brings out the color in all the finest varieties. Young stock raised from cuttings recently and not properly established in the pots has to have some shade over it but the less used the better provided the plants do not wilt. Never keep the young cuttings in the propagating boxes longer than is necessary for them to become well rooted, as the moist heat weakens the leaves at the axils and causes them to drop later when the plants are taken to the rather drier and lighter growing quarters.

Easter Lilies.

The arrival of the first consignments of Easter lilies shows how the season is advancing. Although probably few of the first arrivals are grown as pot plants yet there are always some needed early and the sooner the bulbs are in their pots the better. A layer of dried cow manure, broken into lumps and placed over the bottom of the pots to the depth of an inch or so, will be of great assistance to the bulbs later, when they root down to it. Use a good, loamy soil and select the bulbs for size using the largest and heaviest bulbs in 5-inch pots, the smaller in 4-inch. After potting stand the pots on a level bottom outside and give a thorough watering, enough to reach the bottom of the soil in the pots. Stand them in the full sun and cover the pots with a light mulch of loose litter to prevent the surface drying out too rapidly. About two months is necessary for the bulbs to root thoroughly and be fit for forcing though it frequently happens that, if cold storage stock has run out, they are needed before. Bulbs potted in August may be used for forcing in October, or a little earlier if really necessary. The bulbs now coming in are of the green stemmed variety L. Harrisii.

Begonia Gloire de Lorraine.

The growing season for this important plant will soon begin in earnest and the young stock should be transferred to 4-inch pots and stood on a cool bottom of gravel or coal ashes on the side stages in a narrow span-roofed house, if such is at command. It is not well to try and hurry the plants; they will grow fast enough. Shade the roof so that while plenty of light is admitted the direct rays of the sun are broken. Should flowers appear in the shoots pinch them out and do everything possible to maintain a free and vigorous growth. The temperature by day in hot weather is hardly at the growers command and the only thing to do, in addition to the shading, is to allow plenty of air, damp the stages and between the plants freely and keep up a genial growing atmosphere. A night temperature of 60°, or as near this as possible, should be maintained. The soil for potting should be of a medium or light texture, a good addition of leaf mould being advisable if the staple is at all heavy.

Pelargoniums.

There is a certain degree of ripeness or hardness in the growth of pelargoniums that is well known to experienced growers as the proper stage for cutting back the plants and inserting the cuttings. Green and soft as they come from the houses after flowering they are not as good, while on the other hand they must not be dried too much or the cuttings will take longer to root. It is not easy to describe this but the base of the new growth should be a light brown, firm, yet not hard and woody. Although we are aware that many growers do not agree with us on this point we have always found that pelargoniums root more freely and surely from this class of wood outdoors in the full sun than anywhere else. They should be inserted in flats, labeled and thoroughly soaked with water and kept wet until rooted. If they are allowed to get dry they will not be satisfactory but keep them always wet and practically every cutting will root. The old plants must be kept on the dry side after being cut back and in the full sun and air. They must remain in the pots until new growth starts when they should be shaken clear of the soil, the strongest roots cut back and repotted into smaller pots.

Cyclamens.

The time for sowing cyclamen seed will soon be here again and growers should obtain it if not already in stock. Although cyclamen seed is comparatively high priced, nothing is gained by purchasing or using a cheaper article for so much depends upon getting good varieties. These are now offered separately and in mixture and a reputable seed house should be chosen for although the cyclamen has been greatly improved of late years there is still a lot of rubbish on the market and it is best to be on the safe side and not waste a season. The old plants saved from last season are now making a fine growth in the frames and those that were shaken out and repotted in small pots will soon be ready to again go into their flowering pots. The young stock too is growing freely and must be encouraged. A shady frame or house with ample air at all times are the conditions for cyclamens now and any plants that are ready for repotting should have attention. The routine work consists of damping freely between the pots and watering with care at the roots. Keep a close watch for thrips and other insects and give several light fumigations if any appear. Avoid sprinkling the plants overhead much but always maintain a moist atmosphere.

Sweet Peas in England.

These are indeed late; looking round the grounds of R. H. Bath, Ltd., Wisbech, on July 3, only the first one or two trusses were in bloom. These are well done by this firm, a new quarter each year. Owing to the rains more weeds than is usual were to be seen, but the men with the hand hoe were busy. Between each row were cauliflowers, this firm doing a very extensive trade for pickling. The sweet peas are grown between wire netting, no sticks. S.

THE RETAIL TRADE

ANY arrangement in which water, and plenty of it, is used in the window is sure to be attractive these hot days.

KEEP the store cool and avoid heavily scented flowers as much as possible. White and green are the coolest and most refreshing colors.

Sprinkling Roses and Carnations.

ED. AMERICAN FLORIST:—

Is it best to sprinkle roses and carnations in an icebox?

AN OLD SUBSCRIBER.

Roses may be sprinkled with advantage but never sprinkle carnations.

Church Wedding Decorations.

SEE SUPPLEMENT WITH THIS ISSUE

Church weddings provide great scope for ingenuity and taste on the part of the decorator. The noble yet simple style of architecture in many of these sacred structures lends itself readily to decoration by the florist and shows off the fine contour of large palms and similar plants, while smilax or other festooning has a beautiful effect about the arches and pillars if well carried out. There are some flowers that seem to be singularly appropriate to church decoration. Among these may be specially noted the Easter lily in its many varieties and the even more lovely Madonna lily, Lilium candidum. For purity and grace nothing in the whole range of cut flowers can equal the latter, though the eucharis, a flower that is not as much used as formerly, comes very near to it.

Ministers of various denominations have often their own views on the subject of how their churches should be decorated, and the florist in all cases will find it to his advantage to ascertain whether the incumbent of the church has any objection to any class of work ordered by his customers. Naturally, the customer will, in most cases, be sure of his ground in regard to this before giving his order, but the florist should make sure of this before commencing. Another point of great importance is to see that, whatever scheme of decoration is decided upon, the utmost care is taken not to injure the fabric of the church in any way by driving nails or anything else into the walls, pillars or woodwork. Plenty of string, that can easily be hidden when carrying out the work, must be used and wooden rods covered with green are often useful. Flowers may be fastened to these in any desired position for use on the edges of platforms, on rails, or in any other similar place, the rods being simply placed in position and secured at either end in a manner most suited to the occasion.

The decorations will largely depend upon the amount to be spent and may be very elaborate or very simple. In some recent decorations the petals of of Killarney roses were strewn from the church door to the improvised platform where the service was conducted, prettily dressed flower girls opening the gates to the bride and groom at the end of their floral path. Pulpit, chancel and pew and choir stall ends give opportunities for fine floral effects, bunches of lilies, roses or other flowers often being used with ribbon streamers. Pretty effects in the chancel are often worked out with rambler roses when these are in season; when they are not with southern smilax and cut roses. Tall vases of Easter lilies are always imposing and good, smaller ones being used to grace the altar table. In short, there is room for abundant display of the best of the florist's art in this class of work, and as these interesting occasions are now timely, retailers should be out for the work with circulars, by displaying designs and in other ways.

AT THE WASHINGTON AUTOMOBILE PARADE, JULY 5.

Winner of $50 Loving Cup, by Marche & Co.—See Last Issue, Page 1259.

Store Pointers.

It is all right to have wreath frames mossed firmly so that the flowers do not slip about in them but the risk is usually the other way round; they are made so tight that the stems are broken in getting the flowers in.

During the hot weather few choice greens last as well as the beautiful fronds of Nephrolepis Amerpohli and certainly no other is more attractive for use with choice flowers.

Wherever new wood is being used for alterations look out for dust. Pine and other light woods seem to exude it until painted or varnished.

Simplicity in designs well carried out is always to be admired, but an elaborate design badly carried out is bad from all points of view.

A good vase of cosmos is a cheap and telling feature in the window.

Wreath of Bay Leaves With Cycas.

Unusually artistic and effective was the little design (illustrated on page 1313) executed by the Geo. Wittbold Co., of Chicago, and laid on the casket of the lamented John Thorpe. It was only a wreath of bay leaves against a background of cycas with a bit of purple ribbon for color, but it is such simple affairs done by the master hand that count for so much and are so rarely seen. It stood out in marked contrast to the inevitable pillows of many colors and the like.

Cincinnati Convention Programme.

The preliminary programme of the Society of American Florists' twenty-fifth annual convention at Cincinnati, O., August 17-20, has been issued. The opening session on Tuesday will begin at 1:30 p. m. with an organ recital (each day's proceedings will open with music), followed by President Valentine's address, various reports and discussion and the judging of the trade exhibits. In the evening the president holds a reception, where he hopes to meet as many as can attend. He adds significantly that "formal dress is not expected, but that the most comfortable dress will be the most appropriate." Wednesday's session will consist of an illustrated lecture on "The Value of the Recent Work in Heredity to the Practical Flower Breeder," by Jesse B. Norton, Washington, D. C.; the selection of meeting place, nomination of officers, reports of judges and the annual meeting of the Ladies' S. A. F. "The National Flower Show, Past and Prospective," and an illustrated lecture on "Color Photography," by J. Horace McFarland, will be the subjects at the evening session.

On Thursday evening B. T. Galloway, of Washington, will speak on "Some Work of the Department of Agriculture as Affecting Floriculture," the officers for the ensuing year will be elected and an amendment to Article 4 of the by-laws will be considered. Thursday afternoon will be given up to bowling and other sports, and there will be meetings of the rose, carnation and sweet pea societies and the Florists' Hail Association. In the evening E. G. Hill, Richmond, Ind., will give a paper on "The First Meeting of the Society," while "What the Society Has Accomplished in Twenty-five Years" will be discussed by J. C. Vaughan. A list of those present at the first convention, which, it is interesting to note, was held in Music hall, the same place as selected for the twenty-fifth meeting, will be given. The programme also states that at that time John Thorpe, whose death it is our mournful duty to chronicle in this issue, was president, Robt. Craig vice-president, Myron A. Hunt treasurer and E. G. Hill secretary.

TRANSPORTATION.

Applications for special rates have been refused by all the traffic associations. The refusal is based on the statement that under the former rate of three cents per mile, the rate generally granted—one fare and one-third for the round trip—amounted to four cents per mile and under the new rate of two cents per mile generally in force the round trip without special granted, our members can attend the rates would be four cents per mile. That is, without any special rate convention as cheaply as formerly and be at liberty to go one way and return another, to stay as long as they please and be released from all annoyance of having their tickets deposited and signed. In addition to this, it is pointed out that special summer rates are in effect to all the large cities at very much reduced rates, so that members by purchasing tickets to cities like St. Louis, Chicago, Buffalo, New York and the like, and return at the reduced rates, and then joining the special parties from those cities, can often attend the convention at less rates than ever before.

FROM CHICAGO.

The Chicago delegation and all others desirous of joining it will leave Chicago August 16, afternoon or 12 p. m. midnight (it is as yet undecided which), via Monon R. R., by special train. Address: P. J. Foley, Twenty-sixth street and Western avenue, Chairman of Transportation Committee, for full particulars.

FROM NEW YORK.

The convention party will travel by N. Y. Central R. R. Address: John Young, Secretary, 51 West Twenty-eighth street, for full particulars.

FROM BUFFALO.

Address W. F. Kasting, 383 Ellicott street, Buffalo, for particulars.

FROM ST. LOUIS.

Address F. H. Meinhardt, 7041 Florissant avenue, St. Louis, State Vice-President, for particulars.

FROM KANSAS CITY.

Address W. L. Rock, 1116 Walnut street, Kansas City, State Vice-President, for full particlars.

FROM WASHINGTON, D. C.

Address W. F. Gude, 1214 F street, Washington, D. C.

AT THE WASHINGTON AUTOMOBILE PARADE, JULY 5.

Floral Umbrella by Geo. C. Shafter.—See Last Issue, Page 1259.

The Gibson House has been selected as headquarters. Requests for rooms or inquiries as to rates should be addressed to the Gibson House, Cincinnati, O. All rooms engaged in advance will be supplied with electric fans, without charge, if asked for when rooms are engaged.

THE TRADE EXHIBITION.

The trade exhibition will occupy two floors of the Music hall. Abundant space is available and perhaps no more advantageous location has ever been at the disposal of the society for its exhibition. This being the twenty-fifth meeting of the society and it being held in so central and accessible a point as Cincinnati, all indications are for a record-breaking attendance, and the value of an exhibit to those having horticultural products for sale can hardly be overestimated.

Growers of plants, seeds, bulbs, shrubs and trees, dealers in florists' supplies, greenhouse requisites, building material for greenhouse construction, heating apparatus, etc., can here meet the best buyers in the horticultural profession, and no better opportunity for directing attention to the special merits of their goods can be found.

N. B.—Exhibitors are reminded that the duties of the judges are limited to the consideration of and making of awards to novelties and improved devices only. Exhibitors are required to make previous entry of all such exhibits with the superintendent in writing. Full rules and regulations, together with diagrams of the exhibition hall, may be obtained from William Murphy, Superintendent, 311 Main street, Cincinnati.

CHRYSANTHEMUMS

ALWAYS keep some tobacco stems steeping in a tub for use when necessary.

THE earlier planted stock must now be freely watered all over the beds as the roots are spreading out.

TAKING the buds on some of the earlier varieties will soon be in order. Buds secured now will give good flowers in September.

The Chrysanthemums in July.

CULTURAL HINTS.

The majority of the plants are on the benches and the work from now on is looking after such details as watering, tying, weeding, removing laterals and keeping insect pests of all kinds in check. Watering is the most important matter, as it is never finished for more than a few hours at a time. Stock that was planted early and is now from one to three feet high will use up large quantities of water. It astonishes those unfamiliar with its needs how soon the soil will show signs of dryness.

With bright sun at this season the evaporation in itself is very rapid, and the plants are continually taking up atoms of moisture to sustain the foliage. The larger the plants or the greater the area of leaf surface, the more required to keep the foliage from wilting. Usually during midsummer the stock will require going over carefully two or three times a day, continually watching for the dry spots and, when detected, watering thoroughly; be sure the supply is sufficient to reach the bottom of the bench. Spraying over the foliage is very beneficial, but often leads to trouble unless the person in charge is considerate. The best way is to attend to the dry place first and then do the spraying. This work may be done under one operation by backing up along the bench, first watering the dry places, and then throwing the spray on the plants that have just been watered.

The tying should be attended to before the plants topple over. There are many ways to support them, such as stakes, wires stretched over the rows or strings tied top and bottom to wire, but usually the last mentioned is employed, using jute or binder twine, to which the plants are tied with raffia and fastened with a pliable copper wire. The weeding is best done by raking or rubbing the surface of the soil as soon as the weeds make their appearance, for if deferred it necessitates pulling by hand, which entails more labor. The laterals which push out at the joints or above each leaf should be removed when small, allowing one or more growths to continue, according to the number of blooms desired to each plant.

INSECTS.

Insects at this season are not so numerous, but some of them are very persistent and require constant attention. The aphides, both black and green, are most common and are so well understood that it is scarcely necessary to state the various forms of nicotine are the best remedies. Any of the manufactured forms as well as tobacco dust or fumigation with stems are effective and will keep them in check.

Red spider is not usually troublesome at this season if the plants have received frequent sprayings. It is well, however, to keep a close watch on the under side of the leaves and, when present, dislodge the insects by applying water with as much force as possible. If allowed to remain on the plants in any quantity they are apt to ruin the crop after steam is turned into the house.

As soon as the outside temperature requires the use of steam, it is also necessary to curtail the application of water and, under such conditions, with a drier atmosphere, insects increase very rapidly. Sometimes grasshoppers are so plentiful as to require considerable attention. Hand picking is the best remedy, and if this is done in the early part of the day when the intruders are most docile they are easily caught and disposed of. We have

Fig. 3.—Tarnished Plant Bug.

Figure in Left Corner is Natural Size.

lately noticed a few colonies of young caterpillars. In the young stage they confine their feeding to the leaf upon which they were hatched. They grow very fast and in a short time begin to wander to other quarters, greedily devouring the entire leaf. These are also best disposed of by hand picking.

THE TARNISHED PLANT BUG.

Another insect which gives the grower anxiety is the tarnished plant bug (Lygus pratensis); having referred to the pest on previous occasions, we will briefly state it is one of the sucking insects that draw sap from the tender growth. The violent wilting from this injury is the first warning of its presence. The insects are most prevalent in hot, dry weather; when abundant they continue their attacks, extending them to the lateral growths, as fast as put forth, until it is often difficult to retain a growth that is not blind.

They infest all kinds of plants outdoors, particularly asters, with the same disastrous results. In the young stage they are a greenish yellow, and when mature are brownish black, about ⅜ inch long. When disturbed the young will drop to the ground and the adults take wing to other plants. They are constantly on the alert and success in capturing them depends wholly upon the caution with which the approach is made. It does not seem as though the punctures of so small an insect would greatly impair a strong growing plant like the chrysanthemum, but nevertheless the continued attacks are very destructive.

The accompanying illustrations show the effect of their depredations upon the stem of this plant. The first and third sections shown in Fig. 1 are normal, the former being the top and the latter the bottom of the plant which developed before and after this insect was prevalent. The center section shows a portion of the same plant which in the soft state had been repeatedly punctured, causing the stem to become enlarged and the bark covered with wart-like eruptions.

The first section in Fig. 2 is normal, showing the bark, wood and pith in perfect condition. The second section shows the distortion of the bark and this, instead of having pith as in the normal section, was hollow. There seems to be few remedies that are effectual. X.L.All solution applied according to directions is said to be satisfactory, but it is effective only by contact, and hence it may be somewhat like Paddy's remedy for fleas. We have always depended on hand picking, but this method is far from satisfactory when the conditions are favorable to this pest.

ELMER D. SMITH.

Notes in Season.

There is plenty of work among the chrysanthemums to keep the grower busy most of the time these days. The early planted stock has attained a good size and should be staked and supported to enable the plants to receive benefit from the syringings. Removing the side growths also requires close attention, many of the plants setting a summer bud bringing with it numerous side shoots. It is important that these be removed as soon as large enough to properly handle so that the plants have plenty of time to make their best growth for the final buds. It is often puzzling to a beginner which of the top shoots to leave and which to remove. The formation of the top of the plants when they are forming a summer bud at this time consists of a center bud or growth and side growths at the axils of the leaves. The center bud at this time is worthless and should be removed. Either of the side shoots can be allowed to remain, they both being growth shoots, but a finer finished flower will result if the top shoot is cut away and the second one allowed to remain to go on into growth.

Keep the surface of the soil worked over occasionally to prevent its getting baked and to allow the air to penetrate into the soil to keep it sweet. The plants should be treated to sprayings of tobacco tea regularly to clean them of black and green aphis, also when giving the plants their daily syringings remember to apply the water well on the underside of the leaves to dislodge thrips and red spider. During this hot weather the plants will take considerable water and are greatly benefited by being syringed and the atmosphere of the house dampened two or three times a day. They like a good syringing about eight o'clock in the morning, another about noon, then again about four in the afternoon, and should be watered at the roots as they require it. Overwatering should be avoided, but it is equally detrimental to the plants' wellbeing for them to wilt for the want of it.

Any of the late varieties not planted yet should be attended to right away;

it is time that they were in the soil. These require a good light situation and the plants can be set six to seven inches apart in the beds. Any specimen exhibition plants being grown for the fall shows must not be neglected in any way; they should now be in their final pots. If this has not been done do not delay doing it any longer. Do not crowd the plants, but allow them ample room for spreading and for the air to work freely all around them. If any of the branches need supporting put in a stake here and there to prevent their getting broken, also attend regularly to the topping back of the shoots. It is only a short while longer that this can be done and the more closely it is followed up the larger will be the specimen. Keep a close watch as to the plants' requirements in watering, syringing, and keeping them clean of insects. Any of the plants that have been potted for some time and are well rooted through the soil can be given a watering of liquid manure once a week. The plants intended for sale in pots will need every encouragement from this time on. If they are well rooted in the pots they are now in, give them a shift to guard against their becoming hard and woody. Also follow up the pinching back of the shoots right along and give them plenty of light and air at all times.

C. W. JOHNSON.

Varieties for Unheated Houses.

ED. AMERICAN FLORIST:—

What are the best chrysanthemums for flowering in November in unheated houses? E. R.

Almost any of the November flowering varieties would be suitable with care in management. The following are good robust kinds: Mrs. Coombes and Convention Hall, white; Col. Appleton and Golden Age, yellow; A. J. Balfour and Dr. Enguehard, pink.

G.

THE ROSE.

ALWAYS choose a cool night when the temperature goes down to about 60° or less for sulphuring the pipes.

EVEN now it is well to see that spraying is not done late in the day. Let the foliage be perfectly dry by night.

SOW a little freshly slacked lime around the benches where the black slimy scum occurs, repeating the dose if necessary in about a week.

LOOK out for the first signs of red spider in American Beauty and spray the under sides of the leaves well. A pale tint indicates the presence of this pest.

Disbudding.

Even so simple a matter as disbudding may easily be done wrong, and it is no use putting careless men or boys at the work. Boys who can be depended upon and take an interest in their work, however, quickly get the hang of the thing and are very useful and where girls are employed these too may soon be instructed in the work, provided a section man is able to overlook things. Especially is care needed with the young stock. This ought to be gone over weekly and the disbudding done according to the age and strength of the stock. The latest planted, that has not a very good hold on the soil, will be checked by cutting away much growth with the buds, consequently only the tips of the shoots should be taken, but as they get a better hold and are growing more strongly, it will be necessary to cut more deeply when removing the bud, to cut in fact down to a good strong growth bud. It is also better to let the flower buds get larger before disbudding, for every leaf made will help the roots and the resulting shoots will be more vigorous than if just the bud is taken and the eye below it. Varieties differ a little in their needs in this as well as other respects but the above is true of all.

Disbudding on the old plants is largely a matter of routine but it should be kept up-to-date. When the shoots are allowed to lengthen and grow stout and strong before removal they are not only a waste of the resources of the plants but they ruin the flower around which they are crowding. In cases where they have run out much it is often best to pinch out the flower itself and leave as many shoots as there is room for to form flowers in their turn. But this leads an untidy straggling plant and cannot be advised as a rule. The plants should be gone over carefully at least once a week, oftener if time can be found and then all will be right. In connection with disbudding, the removal of all old flowers should have attention as they look untidy and attract thrips. Then, with the young stock, there are often small shoots that are useless and should be cut away. Healthy vigorous shoots are needed, the more the better, but these little side shoots are often the means of attracting insects and fungus and are no good anyway for the shoots that spring from them, if any do, are weak and worthless.

COMMERCIAL.

Work of the Tarnished Plant Bug.

Fig. 1.—First and Third Sections Normal Chrysanthemum Stems. Center Section Showing Distortion Caused by Insects.

Rose Foliage Poor in Color.

ED. AMERICAN FLORIST:—

The foliage on some Bride and Bridesmaid roses recently cut back is coming very pale, almost yellow, in color. We read some time ago in the AMERICAN FLORIST that over watering caused the leaves to turn yellow, but these plants have had hardly any water since they were cut back. What is the cause of it?

A. N.

The condition of the rose foliage described by "A. N." is not at all unusual but the reverse. It is per-

WORK OF THE TARNISHED PLANT BUG.

Fig. 2.—Left Hand Normal Chrysanthemum Stem. Right Hand Showing Distortion and Hollowness Caused by Insects. Both Enlarged.

fectly natural for the young leaves to be light in color and this they will get over as they get older. There is, of course, such a thing as the leaves losing color owing to lack of water, but it is full early for this to happen. We like to give one good watering after another until the new soil used for mulching is well moistened and also the old roots, right to the bottom. Then we feel they are all right for a time. Do this and keep the new growth sprayed once or twice daily—three times in hot weather—and the leaves will gradually assume their proper color as they mature.

G.

FLORISTS' FERNS.

NOTHING but good opinions are heard about Nephrolepis Scholzeli and good judges say it is a coming fern.

BLACK THRIPS is the worst enemy to the bird's-nest fern (Asplenium nidus avis) making ugly patches on the fronds.

AVOID heavy spraying of the gymnogrammas or silver and gold ferns. They are easy to grow but do not like much water overhead.

BE careful now not to water heavy plants of Nephrolepis Whitmani, N. todeaoides and similar varieties overhead or it will cause the fronds to fall over.

Adiantums for Cutting.

There is always a demand for good adiantum fronds and they show a good profit to the grower if well done. On the other hand, if the culture is gone about in a careless or haphazard manner there are few things less satisfactory, for one can never be sure of cutting good stock. Benches planted early in spring are now just coming in to cut from and although the fronds are not all mature yet there are plenty for all the demand there is at present. We like to cut a plant or plants right over at once, not to cut fronds here and there. In the former plan one knows just what to expect from the plants but where they are repeatedly being cut the cutting causes a constant check on the plants. Grow them well, cut them over and let them rest before starting up again is the method we have found most satisfactory.

Adiantum cuneatum and its variety Croweanum are the kinds mostly grown for cutting but there are others more or less suitable. A. Williamsii is an erect grower and produces good hard fronds while the double A Pacotti is liked by some. There are also good varieties of the semi-hardy A. capillus Veneris that are good while others are useless. A. Farleyense, where it is given proper attention, is one of the finest of all but it does not do as well on benches and is more easily managed in pots. While most ferns like a light, loose soil with plenty of leaf mold, peat or some such material A. Farleyense, except in a very young state, likes a much heavier compost.

Ferns are often grown in too much shade, especially when they are needed for cutting. It does not do to allow the young fronds to be exposed to the full sun but they need plenty of light as they get older and a thin shading, such as is caused by spraying lime wash lightly on the glass, is sufficient to keep them right. Raising these ferns from seed is a far surer method now than it used to be. Raisers of the spores are probably more careful than formerly; at any rate they come much more true to name. Seedling stock too is healthier growing and much more satisfactory than plants obtained by division of old stock. In many cases it would pay to throw old plants away or at least to use only the young healthy portions around the outside, throwing away the weaker, older parts in the middle of the specimens.

FILICES.

Nephrolepis Davallioides Furcans.

Showing Albino and Two Normal Green Fronds.

White Nephrolepis.

A most interesting white frond of Nephrolepis davallioides furcans has appeared in the fern house of the Missouri Botanical Garden, St. Louis, The frond was obtained from a clump which is growing beneath a large specimen tree fern, Dicksonia antartica, therefore being shaded to a great extent. These abnormalites are often seen among the flowering plants, but this is the first specimen among the filices noticed at the garden, where the whole frond is devoid of chlorophyll or the green coloring matter within the cells. [This has occurred before.—ED.] The leaves were photographed from the same plant for comparison. The albino frond is very delicate and soon withers after being cut. It will be noticed that it strongly resembles in shape the old N. exaltata. G. H. PRING.

WASHINGTON, D. C.—Mrs. Hardesty, daughter of the late John Cammack, has at last secured her divorce, the petition for which was filed as long ago as September 16, 1895.

THE CARNATION.

AS a constant producer of good white flowers all through the season Mrs. J. C. Vaughan will be difficult to beat.

AFTER throwing out the old stock and before planting the new a heavy fumigation with hydro-cyanic acid gas will be in order to kill any chance thrips, spider or other insects that may be in the houses.

A NOVELTY in the way of a yellow border variety, Comtesse Knuth, will be offered this season by a Danish firm. It is said to be strictly hardy and produces great quantities of flowers outdoors from July until October.

PLENTY of help at lifting time is important, but it is even more important to see that the help is so balanced that the planters in the houses, the carriers and the men that are lifting are working in harmony, so that no one set of men is waiting for the other

Stem Rot.

The time is now at hand when stem rot makes its appearance here and there and the grower sings some of the songs which are not fit for ladies to hear. It is queer to think of this old disease which we have seen for years without finding a remedy for it. I have known of growers who have had their own stock for years and not lose a single plant out of 10,000 or more by stem rot, while on the other hand others who had just started into growing this divine flower lost hundreds of plants.

This is one of the most dreaded diseases in the southern states, where very few growers are without it, while in the north, where the winter is long and cold, this trouble decreases after October. The spreading of stem rot is caused by the breaking off of parts of plants while having the dry grass pulled off at any time. Stem rot will not spread underground, but will set in at any portion of the stem that is barked. By cutting the stem lengthwise and viewing it with a good microscope, one can plainly see that the disease works upward, checking the nourishment, and eventually the plant will fall over, with the lower part of the stem decaying later; at other times the lower part will break from the bottom.

There are very few ways to prevent it from spreading; one of the most successful is to take care in pulling off the dry grass; pull it upward and do not trust boys if it can be helped. We use a good dusting of lime over the ground a week after planting, stirring it into the ground well with the hand; afterward it can be watered; then a little dusting of lime and sulphur, with a blower, will be of great benefit to the plants. Plenty of air and a dusting of lime under the benches will help to eliminate green fly and stem rot; it will also diminish the drying up of the grass.

While viewing a place some time ago, the proprietor not being in, I asked permission to go through the carnation houses. Just as I entered one of the houses I noticed a good-

natured Swede grumbling; I looked at him and then asked what was the matter. In the meantime he had pulled out a plant, then the Sunday school language followed. I looked under the benches and in places saw as much as an inch of water standing. I inquired if a water pipe had burst. He said no water pipe had burst; it was only from spraying to keep the houses moist. In just this way many plants are lost annually.

F. ADAMS.

Summer Culture of Young Stock.

ED. AMERICAN FLORIST:—

Please give me instructions as to the care of young carnations, both in the field and in the greenhouses, time to bench and how to water and treat them afterwards.

A. BEGINNER.

Certainly a comprehensive query, and a good deal of the information sought has already been given in the AMERICAN FLORIST, but doubtless "Beginner" is only one of a large family who are looking for the same information. First of all the care of the field stock is largely a matter or routine culture and much depends on the nature of the soil. Speaking in a general way, most soils bake up some after a rain if the sun shines for a few days and before this takes place the upper surface of the soil should be broken up with hoes or cultivator to keep a mulch of dry, loose soil there at all times. This checks a rapid loss of moisture by evaporation, prevents cracking and is in every way helpful to the plants and, incidentally, keeps down weeds. Stopping the shoots should also be done regularly, going over the plants every few days and pinching the strongest shoots, not doing it all at once and making the plants look as though they had been mowed off with a scythe. These are the principal points to attend to with the field plants.

Plants being summered inside must be kept as cool as possible, night and day, and given plenty of air at all times. Newly planted stock needs less water at the roots than that which is well established but more spraying overhead and, if the least sign of wilting is seen, a fairly heavy shade must be put on the glass. Pinching here is necessary in the same way as in the field. Regarding the time to bench get the benches in order and the soil in at once. It is best wherever possible to wait for a rain before lifting as the plants are less likely to suffer. Still when everything is ready we do not usually wait but go right on.

Before planting, if the weather is hot and bright, a fairly heavy shade should be put on the glass, as this is not only better for the plants after being disturbed but the help can work faster and in greater comfort. Plant with as much dispatch as possible and give each plant a good watering, enough to well soak the soil immediately around each. After this first watering a light sprinkling overhead several times daily will keep the plants in good order and growing freely. The strongest growers, such as Beacon and Enchantress, may be planted at 10 inches to one foot apart while for Winsor and more moderate growers eight inches in the rows and 10 inches from row to row will be a good distance. This touches briefly on the principal points of culture and "A Beginner" should write again if there is anything else in which he is in doubt.

COMMERCIAL.

THERE are weeds in the orchid family as well as in others and inexperienced growers should put themselves in the hands of reputable firms when ready to buy.

ANGULOA CLOWESII.

ORCHID NOTES.

PLACE Cœlogyne cristata in a cool, shady frame to finish its growth.

THE cymbidiums are among the most lasting orchids in cultivation and it is not uncommon for C. Lowianum to last three months in flower.

STANHOPEAS have the remarkable quality of pushing their flowers down through the bottom of their baskets instead of up, but they are very beautiful.

THOSE who have only grown the species of dendrobium have no idea how fine and how easily grown the hybrids are, and they are cheap and plentiful now.

PERISTERIA ELATA, flowering now, is remarkable in that the center of the flower bears an almost exact resemblance to a white dove. "El Spirito Santo" the Spaniards in Panama call it.

Anguloa Clowesii.

THE CRADLE ORCHID.

The genus anguloa comprises about half a dozen species; they are all indigenous to the Andes of South America occurring at an elevation between 5,000 and 7000 feet from northern Colombia to 10° south latitude in Peru. Here they are found growing on damp moss-covered rocks. They were first discovered by M. Linden in 1841-43. The genus was dedicated to Don Francisco de Angulo, director-general of mines in Peru at that period.

A Clowesii, commonly called the yellow cradle orchid, first flowered in 1844 in the collection of the Rev. John Clowes of England in whose honor it is named. The plant illustrated is from the collection of the Missouri Botanical Garden, St. Louis, where it is grown successfully in the cypripedium house. Its flowers have no commercial value, but they are extremely interesting botanically and

attract a good deal of attention from the visitors. Each one is an exact replica of a cradle, of a deep citron color. They emit a strong fragrance of aniseed. The labellum or lip is attached to the base of the column by a hinge-like appendage which oscillates when the flower is touched. An essential feature in the cultivation is a complete resting period when the pseudobulbs are mature, so as to induce them to flower when the young growth appears in the spring. Repotting should take place, if necessary, when the first signs of growth appear. Three flowers from one growth, as seen in the illustration, is a rare occurrence. G. H. PRING.

Easily Grown Odontoglossums.

With the exception of Odontoglossum grande, which is grown to some extent for cutting none of this section of the genus is at all popular with growers. Yet all are fine plants and if not quite as large in flower as O. grande they are equally beautiful and just as easily grown. They will put up with the summer heat here, differing in this way from O. crispum and O. Pescatorei and their varieties which may be grown but are more difficult to handle.

O. grande, which may be termed the type of this section of odontoglossum, is the largest flowered species in the genus; the sepals and petals are yellow with heavy transverse blotches of deep reddish brown, the lip whitish, also marked with brown. O. grande is a winter flowering species that should be grown cool the year around. From the time the new roots push from the new growth until the latter is finished the supply of water must be very free and even when at rest the roots must not be dried. In the ordinary cool orchid house, or in fact in any greenhouse kept shady and cool, the plants will grow and do well and during the summer months they may be placed outside in a shady spot with advantage, the plants and the soil around them being sprayed several times daily.

What is true of O. grande as to culture applies also to O. Insleayi and it is difficult to account for this pretty plant not being more grown. In habit and appearance it is very similar to O. grande but it flowers a couple of months earlier, often in autumn. The type has sepals and petals yellow with brown markings; in the variety Leopardimum the markings are reddish crimson with a deeper ground color; in Splendens the flowers are almost totally yellow except the lip, this having several red blotches while Pantherinum has more brown and less yellow in its makeup than any of the other varieties.

O. Uro Skinneri is something along the same line as the preceding but taller growing and throwing a flower spike two feet high. It thrives under the same treatment as O. grande and flowers in July and August. O. Schleiperianum is a paler colored form of O. Insleayi according to some botanists while others consider it a distinct species. The flowers have the same yellow tint but this is overlaid with a deeper, brownish yellow, quite distinct from all others. It is not quite as showy as the species with which we have compared it but a very pretty and useful kind for cutting. This is practically all of what may be termed the O. grande section but there are several other odontoglossums that are just as easily grown and not affected by the heat.

O. pulchellum, or O. Egertoni, as it is sometimes called, is a charming little species producing erect spikes of pretty, white sweetly scented flowers. There is a remarkable singularity about this species. It is almost precisely identical with O. citrosmum but smaller and the flowers are just inverted. If the spikes took a downward direction instead of erect (as those of O. citrosmum do) they would be exactly alike. These two species may be grown with the cattleyas if no other orchid house is at command though a little less heat is desirable. O. citrosmum requires more drying at the root in winter than any other odontoglossum. Some growers go so far as to say that it will not flower if any water is given after the growth is complete until the spikes show in the young growth but this is hardly true of some plants at any rate. Still it is safer, after the beginning of winter, to keep the roots quite dry, no matter if the bulbs shrivel and wait until the little white tip of the flower spike shows in the new growth. After this it is hardly possible to give too much, as O. citrosmum is a thirsty subject while growing.

O. Edwardi presents the unique feature of a violet or purple colored odontoglossum. No other species is anything like it; the spike grows erect from the center of the new growth and is branched and crowded with purple flowers, each with a bright yellow eye. It likes plenty of water the year around, cool treatment and lots of fresh air. It flowers in early spring and is a native of Ecuador. O. maculatum is an old garden orchid and one of the easiest to grow. It also lasts in flower a remarkably long time. It flowers in early spring but it is not at all unusual for the same plants to be in flower at midsummer. These are by no means the only species that may be termed easily grown but they will serve to show that there is plenty of variety in this beautiful genus even leaving out the difficult ones.

COMMERCIAL.

Electricity in Plant Culture.

The emperor of Germany, according to the Evening Standard, has introduced on his private estates at Dahlen, a few miles from Berlin, the new system of stimulating the growth of plants by electricity. Experiments systematically conducted under the supervision of Dr. Höchstermann are said to have demonstrated that the growth of plants, flowers and, in fact, all kinds of vegetation thus far tested can be stimulated by charging the air above and around them with electricity. Further systematic experiments are now being carried out to ascertain the precise differences in the growth of plants in an atmosphere charged with electricity and plants which grow under normal conditions, and also to find a cheap and simple method of charging the atmosphere with the necessary electricity.

The Work of the Peony Society.

BY PRESIDENT BERTRAND H. FARR.

It has been suggested that, as one of the committee on nomenclature sent by the American Peony Society to assist in the work among the peonies at the Cornell test plot this season, it would be well for me to give an account, through the columns of THE FLORIST, of the work done and the condition of the peonies in the plot as we found them, for the benefit, not alone of the members of the society, but the large number of florists and amateurs in general who are more or less interested in peonies and the work of the society. I am glad to do this, especially in view of the criticisms which have been made by some members of the society, which were voiced and made public in President Ward's letter read to the society at its last meeting at Queens, N. Y. Mr. Ward, of course, has not seen the plot for two years, and his impression regarding the conditions at Cornell has been formed from hearsay and without being aware of the great improvement which has been brought about during the last year.

PLANTS CHECKED BY MOVING.

It might be well for me to mention the basis from which these criticisms have arisen in order to make it more clear that it was due to a few circumstances at the very beginning which, while unfortunate in delaying the work, were unavoidable, and for which no one could justly be blamed. It must be admitted that the first results were disappointing, because the peonies were unfortunately planted at a location that was later on required by the college authorities for other purposes, making it necessary to move them to another place. This gave the plants a check from which they had not recovered when the meeting was held at Ithaca in 1907, and it was at once seen that it would require another year's growth before it would be possible to study the peonies properly, and members who came expecting to see a fine display of peonies in the field were disappointed.

The ground was a very stiff heavy clay, which seemed as if it might be too wet, and many members expressed the opinion that peonies would not thrive there unless the field was thoroughly drained. This opinion seemed verified when the following year, 1908, after a cold, wet spring, the majority of the plants still failed to show typical blooms.

In spite of all, the meeting in 1907 turned out to be a very interesting one and the members went home full of enthusiasm and with the conviction that the work was well on its way to a successful conclusion. We felt deeply indebted to the university for the work it was doing for the society, to Prof. Craig for his cooperation and hospitality, and to Dr. Coit for the thorough manner in which he had gathered together all of the known peony literature and laid the foundation for effective work, including the publication of the check-list, containing a list of all the names of the peonies catalogued at the present day, some 2,700 in all, a large proportion of which were represented by the plants themselves in the test plot.

It was suggested that a new plot be planted, this time the object being to form a collection of only the very choicest varieties, each large grower being invited to send from 100 to 150 of what he would consider the very best varieties. This suggestion was carried out, and the following fall collections were sent in by a large number of growers, the new plantation being placed alongside of the old one, but on ground lying a little higher.

AN UNFORTUNATE MEETING.

The meeting in 1908 turned out most unfortunately for the welfare of the society. President Ward was unable to be present. Prof. Craig was in Europe dangerously ill. Dr. Coit had accepted a permanent position in Arizona and the work of the society was in charge of Leon D. Batchelor, who had but recently taken charge, having had scarcely time to become thoroughly conversant with the work in hand. The result was depressing and discouraging for the society, and the situation for Mr. Batchelor a most embarrassing one.

The peonies again, in the original plot, were not up to expectations, and it is scarcely to be wondered at that under the effect of so many depressing circumstances some of the members should become impatient and indulge in open criticism. For it seemed to many of us then that the university had lost its interest, and that there was danger that the whole purpose of the experiment would fail. Suggestions were made by some that the peonies be moved to a more favorable location, and by others that the old plot be abandoned and the work concentrated on the new plot. Fortunately neither of these suggestions was carried out, it being decided that it would be unfair to the original donors to fail to carry out the test along the lines originally planned.

A committee of three was appointed, C. W. Ward, S. G. Harris and myself, to devise ways and means of improving the conditions of the plot, and to confer with the college authorities on this subject. This committee met in Mr. Ward's office in New York and discussed the subject, with the result that Mr. Brown of the Cottage Gardens Co., acting for Mr. Ward, and myself were to send a letter to Prof. Craig after his return, conveying the suggestions we had to offer. This letter, however, was never sent, as in the meantime, through correspondence with Mr. Batchelor, we learned that practically everything it was our intention to suggest was already being carried out under the direction of Mr. Batchelor, the college authorities having given him full charge and power to do everything which in his judgment was required for the good of the peonies. Provision had been made for drainage, and over 80 loads of manure hauled on the plot. Any further action on our part was deemed unnecessary.

GOOD SHOW IN 1909.

This year the peonies made a splendid showing. They are strong and healthy, and with but few exceptions are full of typical blooms which gave us a splendid opportunity to study them and make comparison. What is most surprising, the strongest plants and finest blooms are in the portion of the plot that came in for the greatest amount of criticism—that is, the very lowest point in the field. Here some of the very choicest varieties are found, many of them from the collections received from Europe. Avalanche, Albatre and Mlle. Rosseau stood nearly shoulder high, with immense blooms, which were a revelation to me, also great clumps of full double Martin Cahuzac, varieties which in our nurseries are never allowed to stand long enough to show us what they really are. The Lady Alexander Duff, sent by Thurlow, with its immense white blooms, was particularly noticeable, all growing in the ground condemned the year before as being absolutely unfit to grow peonies in.

Another point which I took particular notice of was the fact that the colors of most of the varieties were especially strong and distinct, all of which goes to show that while it takes peonies longer to establish themselves in the heavy clay, the strong soil produces excellent results when they are finally under way. My only regret was that the other members of the society could not have seen them this year instead of last. I wrote to J. Dauphin asking him if he had any suggestions regarding this report. I cannot resist quoting the following from his letter:

"I have no suggestions to make, as I think whatever you say on the subject will be the same that I would say. For the general appearance of the plants, either as a whole or individually, I had no kick coming. The plants were strong and healthy, and flowers in as good shape and size as could be. Very few weeds, and the ground had been well cultivated. I am pretty well satisfied with the looks of the plot this year. I know the difference between that clay soil and our sandy loam at Long Island. They may on their lot sometimes be unable to cultivate or weed out just on account of the weather.

"Not taking account of the mixture of varieties, which was done by everybody, I say the lot is O. K. And, moreover, I believe Mr. Batchelor is doing his very best in the case and, I am sure, will keep it up. As regards drainage, what do they want to drain, pocketbook or lot? Neither needs it, I think. There is, it is true, a low corner in the plot, where Goos & Koenemann's plants are, but they seem to enjoy the spot. I wish you would in your report emphasize the pains Mr. Batchelor is taking in this work. My way of looking at the whole situation is not of censuring anyone, but just the other thing, congratulations for the work done. Very truly yours, J. Dauphin. July 16, 1909."

MR. BATCHELOR'S WORK.

When we arrived we found Mr. Batchelor among the peonies with two assistants who were helping him in tabulating descriptions of the varieties in bloom. A tent had been erected and everything necessary for carrying on the work was right on the ground. There are 1,933 numbers in the original plot, and to go over each of these one by one seemed like a hopeless task. The mix-up of varieties and names is appalling. I don't believe the members of the society begin to realize how bad it is. I am sure I did not. But there they were side by side, all in bloom. And by the evidence we were all guilty. It is impossible to go into details, but here are a few illustrations: Edulis Superba appears under 24 different names, and I don't know how many got away. Nearly all the L'Esperence sent by American growers is Edulis Superba. The European growers sent the correct one. "A fleshy white minutely powdered with lilac, Duchess de Nemours (Guerin)" in every case proved to be Edulis Superba. Modeste Guerin and Rosea Superba proved to be the same, while Gen. Bertrand in many cases appeared under the name of Modeste Guerin. Probably Queen Victoria, or Whitleyii, could lay claim to the greatest variety of names, unless perhaps, among the reds, with stamens, where the greatest confusion exists, Delachii, Fulgida, Louis Van Houtte and others being badly mixed. Lady Bramwell, long catalogued as a Kelway introduction, proves to be in every case identical with the old Fench variety, Dr. Bretonneau (Verdier), and so on. The check list, with its 2,700 names, staggers one. But at the above rate I believe it can be reduced to one-fifth that number by the process of elimination.

Naturally this thought will arise in the minds of many, How can the committee be sure it is able to say which is the correct variety among such confusion? At first it seemed impossible; but, on getting down to work, strange to say, the very confusion in many cases brought about the natural solution of the problem. The positive identification of a variety in one place solved the question in a host of others, and as we advanced through the plot the work became clearer and clearer.

DESIGN OF CYCAS WITH LAUREL WREATH AT FUNERAL OF JOHN THORPE.

Made by the Geo. Wittbold Co., Chicago.—See Page 1307.

from the simple fact of having all the evidence gathered together before our eyes.

EUROPEAN COLLECTIONS.

It was a master stroke on the part of Mr. Ward when he induced the most reliable European growers to send their collections over here. We have Dessert's complete collection, in addition to that of Croux, and Paillet of France, Goos & Koenemann of Germany, Barr & Sons of London and DeGraaff Bros. of Holland, this last collection being obtained through the efforts of Prof. Craig. These collections have proved to be a wonderful help in this work, without which I am convinced it would have been impossible for us to make such headway.

The work naturally resolved itself into three parts: First, varieties which can be identified without much difficulty and which we were able to pass upon as being correct without much doubt; second, those varieties which for various reasons will require more study or regarding which we had no data to work upon; third, varieties with names of uncertain origin, that probably it will never be possible to identify, and which are of such doubtful value as not to be worth the time and effort necessary to establish their identification, even if it were possible.

Of the first group Mr. Batchelor writes that he thinks the list will number 275 varieties, descriptions of which will be published by the college during the coming winter. It is the intention to start a new plot wherein three of each of these 275 varieties will be planted to serve a basis of comparison for future work and to show the members of the society the true variety so far as the committee is able to judge, subject to the correction of any errors which may be discovered before the official catalogue is finished and permanently published. The third class will be eliminated from further consideration, except as identification follows in the natural progress of the work, leaving only the varieties in the second class upon which the work of the committee will be concentrated next year.

Prof. Craig says the university has taken hold of this work, backed by the state of New York. And they will carry it to its final conclusion, even if the Peony Society should go out of existence. They have already spent over $700 on the bulletins printed for the society. Several acres are occupied by the peonies, the use of the land and its care being no small item. Secretary Fewkes in a letter just received writes as follows: "I think the society does not realize what is being done for it by Prof. Craig and his assistants, and what little experience I have had in such matters leads me to believe, that the nomenclature business would soon be in the same condition in which the peony committee of the S. A. F. find its efforts, had it not been for Prof. Craig. I am glad the society conferred honorary membership on Mr. Batchelor. And when they come to realize the amount of work he is doing, I think they will be glad to honor him in any way that seems fit."

John Thorpe.

From Photo Taken at Washington Park, Chicago, January, 1904.

OBITUARY.

John Thorpe.

John Thorpe, seer of American floriculture and first president of the Society of American Florists, is no more. He died at the residence of one of his daughters, Mrs. M. Flint, 3519 Princeton avenue, Chicago, with whom he had made his home in recent years, July 15, at the age of 67. He had been in failing health for some months and during the past few weeks his relatives felt that the end was close at hand. Mr. Thorpe's place in floriculture will perhaps be more truthfully fixed by the historian of the future, but it is beyond question that his genius and industry in the cause have awakened interest and enthusiasm in every section of this country. The foundations of his career were well laid, as told in the story of his early days, in the AMERICAN FLORIST of November 1, 1885, as follows:

"John Thorpe was born April 3, 1842, at Keyham, Leicester, Eng. His father was gamekeeper of a large estate, and also had much knowledge and skill as a gardener. Under his instruction and later under that of an uncle who was both a nurseryman and a florist, and to whom he was apprenticed, the lad rapidly acquired such knowledge that before he was 16 years of age he grew and exhibited six cinerarias at the Leicester spring show, beating three or four competitors. After the death of his uncle, which happened a month later, he went into a large fruit-growing establishment, where he remained three years. During this time he was growing for exhibition with marked success geraniums, calceolarias, fuchsias and verbenas. After this he returned to Leicester and had for his tutor the present curator of the Glasgow botanic gardens. After four years he found himself in possession of the place in which he was apprenticed. Later he became a partner in the Paddock nurseries at Stratford-on-Avon. In April, 1874, he landed in New York enroute for Cleveland, Ohio, where he was to take charge of the grounds of W. J. Gordon. After three years he started in business for himself in the same city and continued in it until removing to Queens, L. I., in January, 1880.

"Mr. Thorpe's life-work has been in

OUTING OF VAUGHAN'S SEED STORE (NEW YORK) EMPLOYES AND FRIENDS AT BAMBERGER'S PARK, ELTINGVILLE, JULY 17.

See Page 1349.

the line of artificial fertilization. With a keen, true eye for form and color, a thorough knowledge of plant life and laws, a persistent steady purpose, and a love and enthusiasm for his work, he could but make a successful hybridist. His seedlings are numerous, and many of them of rare merit. Among geraniums, Macbeth, Wm. Cullen Bryant, Happy Thought, Henry Cannell and others show him to be the peer of any man living in this work. Black Knight and Portia among carnations bear witness that he is equally at home with this popular flower. And for chrysanthemums, what has he not done? In their season they have become almost as popular as the rose. Their glory and triumph attest the skill of their manipulator. Phloxes, petunias and even potatoes show forth his handiwork. Of the latter he had at one time not less than 6,000 seedlings, some of which are grown today, the round Model raised 20 years ago being shown in many collections last season.

"His busy life leaves him but little leisure, yet he has gained for himself a worthy place among horticultural writers. His style is clear, vigorous and terse, only less pithy and pointed than his conversation, which is worth a day's journey to enjoy, running over as it is with keen, crisp, original thought. As the first president of the Society of American Florists, and an active member of one of the largest plant-growing establishments in the country, he is well known to every reader of this journal."

From the time Mr. Thorpe left Cleveland and became a member of the firm of V. H. Hallock, Son & Thorpe, Queens, N. Y., his interest and work in the advance of floriculture through exhibitions at New York and elsewhere increased rapidly. The Hallock establishment at that time was not equipped with greenhouses in a large way, and what with many small plants required for the mail order business of the firm and Mr. Thorpe's experiments in hybridizing, the modest room was pretty well taken up and crowded, probably a condition not tending to the noticeable advantage of either. The widely different conditions which these two lines of effort naturally required finally resulted in Mr. Thorpe's retirement from the firm in October, 1887, when he went to New York to associate himself with Siebrecht & Wadley. However, the contemplated partnership was never consummated, and in February, 1888, he went to Pearl River, N. Y., taking over the place owned by the Hanfts.

At a preliminary organization meeting held in the Sherman House, Chicago, June 19, 1884, he was elected first president of the Society of American Florists. In 1886 we find him busy as secretary and manager of an exhibition held under the auspices of the New York Horticultural Society, said at the time to be the finest show ever held by that organization, the list of exhibitors, extensive for the period, including Peter Henderson & Thorley among others. Mr. Thorpe was appointed chief of floriculture at the World's Columbian Exposition in 1893, being actively urged for this position by his eastern friends at the Florists' Convention in Buffalo. At that time, and while floriculture under the plan of the World's Fair management was not in itself a bureau, yet in appointing Mr. Thorpe to that department he was given the title of chief of floriculture by Director General Davis and his work was understood to be separate and independent from the Bureau of Horticulture, of which J. M. Samuels was chief. His last great efforts in the way of exhibitions were the Kansas City, Mo., shows of 1901-1902, generally voted whirlwind successes worthy of that enterprising community. Rockwork was one of the forms of gardening to which Mr. Thorpe paid considerable attention, and it is said that one of the finest examples of his work in this line is to be found at the Pennsylvania railway station, Richmond, Ind.

Contemporary and friend of the late C. F. Klunder, another master of floriculture, whose talent bent in a different direction, however, that of floral art, the two men had much in common, and W. N. Rudd faithfully portrayed Mr. Thorpe's character at the funeral exercises when he said: "This man was a genius. It is said that genius is akin to madness. It may be so. He created while others reaped the material benefits. He had little or no genius for money-getting or money-keeping. But he did have a genius for seeing the beautiful in nature. In that wonderful brain he could see, long before anyone else, the possibility of the lovely "pink" developing into the grand commercial carnation of today which is literally the bread and butter of so many of our profession. It was he who saw in the crude, daisy-like flower of the field the thing of glory the chrysanthemum is today. This man was a genius. His were the golden dreams coined into golden dollars by those who came after him."

The funeral services were held at the home of his daughter, Mrs. Margaret Flint, on an ideal summer day, Saturday, July 17. The Rev. Mr. Davis, of the Armour Mission, officiated. The hymns "Abide With Me" and "Lead, Kindly Light" were sung. Following the sermon Secretary Rudd in a short talk paid a high and touching tribute to Mr. Thorpe's life and work. Floral emblems were most numerous and elaborate, including tributes from the Society of American Florists, the Chicago Florists' Club and a host of personal friends, very largely in the trade. Many leading representatives of the florist trade in the city were present. The remains were cremated and the ashes placed by the side of his wife in Oakwoods cemetery. The pall bearers were W. N. Rudd, E. A. Kanst, Geo. Woodward, Jos. Curran, F. F. Benthey and J. C. Vaughan. Among those from out of town were J. D. Carmody, of Evansville, Ind., and H. E. Philpott, of Winnipeg, Man. A plaster cast of Mr. Thorpe's face taken July 18 proved quite a success.

Mr. Thorpe was married in 1862 to Clara Soars, the daughter of a well-to-do farmer of Woodhouse, Lincolnshire, Eng. Mrs. Thorpe died June 8, 1900. They had six children, four of whom survive, John Thorpe, of Tarrytown, N. Y., Miss Thorpe, Mrs. Flint and Mrs. Romaine, and seven grandchildren.

New Orleans III

I claim that florists are among the best educators in the country. They teach by example as well as precept all that is good and true; they will mould the character of generations to come; they help those afflicted with sickness, and make the long hours of pain more endurable. They teach also that, with even all the buffetings of life, there is really something worth living for, and that withal the beauties of nature are ever truthful, full of inspiration, and prompt us all to do that which is right.—John Thorpe at Cincinnati, 1885.

JOHN THORPE is dead.

Now Ohio has got the hailstorm habit.

ANOTHER big automobile parade for Washington, D. C., is scheduled for September 30.

THE preliminary programme of the Society of American Florists has been mailed to the members.

CHEAP paint is useless as a preserver of wood. Buy good white lead paint for all new or old woodwork.

AZALEAS, according to Belgian advices received July 21, are not as good as they should be at this time of year, having had too much rain.

THE "Wonderberry" of Luther Burbank was described as worthless by the judges at a recent show of the Massachusetts Horticultural Society.

HARRISII LILY bulbs received this week appear to be of extra fine quality, being of good size, solid, well ripened and apparently more uniform in type than usual.

THE 1909 S. A. F. badge is being mailed by Secretary Rudd. The color is a copper bronze. The original design was supplied by a committee consisting of Messrs. Murdoch and Vaughan.

WE do not want to imitate the blacksmith who sat on his anvil on Sundays for a change, but there is always something to be learned on a vacation trip by visiting other people's places.

F. R. PIERSON, chairman of the tariff committee of the S. A. F., reports receiving a letter July 10 from Senator McUmber with copy of printed bill showing the final acceptance by the senate of the revised schedule exactly as submitted by him in Washington.

THE AMERICAN FLORIST desires the names of members who have been very regular in attendance at the recent annual conventions. It desires to compile a list of those who have attended the most meetings, and will be glad to receive records from its subscribers who have been constant in their attendance at the S. A. F. conventions.

Personal.

J. J. Curran has given up his place at Salem, Va., as Mrs. Curran does not like the climate of the south. His present temporary address is 62 Ackerman avenue, Clifton, N. J.

W. W. Coles, of Kokomo, Ind., and family are at Oden, Mich., where Walter is busy making contracts for the S. P. C. banquet at Pittsburg next year.

J. B. Deamud has harvested his early chicken crop on his Cairo (Mich.) farm and will soon commence on the lambs.

Julius Roehrs, Rutherford, N. J., is in Switzerland.

Society of American Florists.

REGISTRATION OF ROSE.

Wilmer W. Hoopes, of Hoopes Bro. & Thomas Co., West Chester, Pa., offers for registration the following rose: Climbing American Beauty—Parentage, an unnamed seedling crossed with American Beauty; growth—of strong climbing habit, making shoots of 10 to 12 feet in a season. The foliage is a rich dark green, free of mildew or black spot. The color and form of flower is similar to its pollen parent, American Beauty, four to five inches in diameter. It blooms very profusely in June and occasionally all through the summer. The plant is hardy, having withstood a temperature of 5° below zero without injuring even the tips of the shoots.

The application for this registration having been submitted to the American Rose Society and not having been objected to by it, the registration is completed under the rules of this society.

W. N. RUDD, Sec'y.

July 16, 1909.

The National Irrigation Congress.

Continent-wide interest has been aroused in the problems relating to the reclamation of arid and swamp lands, deep waterways, forestry, conservation of the country's resources, good roads and home-building to be discussed during the seventeenth sessions of the National Irrigation Congress in Spokane, August 9-14, and there is every indication that the attendance will be the largest and most representative in the history of the organization.

Railroad presidents, financiers, scientists, government officials, engineers and practical men in other lines of activity have accepted places on the programme and advices to hand show there will be from 4,500 to 5,000 delegates, including farmers, orchardists and truck gardeners and visitors from various states. R. Insinger, chairman of the board of control, has letters from 25 governors of states and territories west and south of Chicago, saying they will be present one or more days and representatives from Europe, the South American republics, China and Japan are expected to remain throughout the week. A varied and exhaustive programme has been arranged.

The E. G. Hill Co., Richmond, Ind,

For three years past the E. G. Hill Co., of Richmond, Ind., has been operating two places some four miles apart; the firm had outgrown its east side place and, being hemmed in by the city parks, was unable to add to its real estate. The new place is a 50-acre strip lying along the Pennsylvania railroad and bounded on a second side by the city street car line, which terminates at the office. Last year the company began moving a portion of the east side glass to the new place, where there are now 11 large houses each 500 feet long; the moving will be completed next year, but there will be left at the east side place 10 houses, which are now the property of F. H. Lemon (E. G. Hill's son-in-law), which will be used to care for the city retail trade. Mr. Lemon has withdrawn from the Hill corporation, which now consists of E. G. Hill, president; Jos. H. Hill, vice-president and manager; S. A. Hill, secretary, and E. H. Mann, treasurer. The offices were removed to the west side on July 1 of this year. Visitors to E. G. Hill Co.'s establishment can make direct connection with the greenhouses from the railroad station. As in former years, this firm is testing some unusually interesting new roses, carnations and chrysanthemums.

Meetings Next Week.

Baltimore, Md., July 26, 8 p. m.—Gardeneners' Club of Baltimore, Florists Exchange hall, St. Paul and Franklin streets.

Cleveland, O., July 26, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Lake Forest, Ill., July 28, 8 p. m.—The Horticultural Society of Lake Forest, Council Chamber, City hall.

New London, Conn., July 28.—New London County Horticultural Society, Elks' hall.

Toledo, O., July 28.—Toledo Florists' Club.

Wants, For Sale, Etc

STOCK AND TRADE GOOD.

Trade the past week was very satisfactory. A nice line of stock was to be had and the demand kept pace with the supply. American Beauty roses and others are coming along nicely. Carnations are growing smaller and will very soon be over. Asters are improving in quality and some right good stock is to be had. McCullough's had some very good lily of the valley, and Lilium longiflorum, L. rubrum and L. album were to be had in quantity. Sweet peas, owing to the heavy rains, are about done for. G. O. Coblentz, of New Madison, began shipping his superb gladioli to this market the past week and they were eagerly sought for at $5 per 100. The blooms were well worth the price. Green goods of all kinds are plentiful but we regret to say there is no active demand at this writing.

NOTES.

Last Wednesday afternoon about 12 ladies held a meeting at Louis Kyrk's wholesale house to map out a programme of entertaining the ladies at the coming S. A. F. convention. Mrs. Louis Kyrk acted as president and Miss Edith Kyrk as secretary. C. E. Critchell who is a member of the ladies' committee was also in attendance. Several committees were appointed to report at the meeting on Monday afternoon at 2 p. m. at the same place. A funny incident occurred just as the president rapped for order. A band of brass instruments played by colored gentlemen put in their appearance and played (or rather murdered) "My Old Kentucky Home" with a persistency that was remarkable. Even the alluring smiles and kind words of Charley Critchell failed to stop them. However, a happy thought struck Miss Cronan, one of the ladies present and she sallied forth with a big silver dollar which she gave to the man playing the trombone. The members of the band listened to her pitiful plea, they spied a wagon full of watermelons down the street and fortunately no more music was heard the balance of the meeting.

RICHMOND, IND.—Fred H. Lemon & Co. is the title of the firm succeeding to the retail business of the E. G. Hill Co. The letter head notes the fact that the new concern operates greenhouses east of the city.

DAYTON, O.—Walter Matthews, after a hard year's study of the floral business all through the large cities in the west, has returned and is again at his old post of duty with his father; they are busy all the time.

FREMONT, NEB.—H. C. Green has completed the work of tearing down the old greenhouses and has begun the erection of the new ones. Larger ones will be put up with modern devices for heating and ventilating. When completed there will be 28,000 square feet of glass, an increase of about 10,000 square feet over the old buildings.

Summer Roses

We make a specialty of **Kaiserin, Pres. Carnot, Killarney, Richmond, Perles** and **New Beauties** during the hot weather, and have built cold storage facilities to handle **Summer Roses** alone.

NOTHING DOING.

We have had a week or two of ideal summer weather. The community is healthy, almost distressingly healthy, the mortuary lists are smaller than for years, and with one or two exceptions funerals which involve large floral displays have been lacking. The state of trade is indicated by the averment of one of the Charles street florists that "It is just like heaven. There is no death there; neither is there any marrying, nor giving in marriage." The hospital demands continue; the great public establishments and the private retreats maintained by physicians and surgeons, and to them go perennial streams of flowers, lovely messengers of remembrance and sympathy and hope.

NOTES.

The semi-annual meeting of the stockholders of The Florists' Exchange was held July 12. The occasion was a formal one only and no business was transacted except to approve the distribution of a dividend of $5 per share which had been voted by the directors. The report of the board showed that notwithstanding the general dullness still prevailing there was a very substantial increase in the business done by the concern—over $1,000 a month—and a comfortable sum added to its actual capital.

The State Horticultural Society will hold its midsummer meeting at Mountain Lake park, July 30 to August 2. This is an elevated section, a delightful place for such assemblages and convenient to the mountain fruit region, which will be visited by the members. Papers will be read and discussed, reports of officers received and a general good time enjoyed by all who attend the session.

Fred'k C. Bauer is sending in some fine America gladioli. In the general scarcity of flowers considerable employment is found for these for funeral work, the individual flowers being wired, and replacing roses, etc.

A batch of some 500 Harrisii lilies came into the Exchange on Saturday from a northern shipper, but the state of the market was such that they did not seem to be taken up.

The Charles street stores, apparently by agreement, have cards in their windows announcing that they close now at 1 o'clock on Saturdays and at 5 on other days. S. B.

Chicago.

At this season of the year it is expected that there will be very little call for cut flowers, and everyone is realizing their expectations. There are some few good summer roses on the market, for which there is a fair demand, and they bring relatively fair prices; but the great bulk of the stock that is offered is poor and is selling for a song, with very few singers. Asters are in in very limited quantity and are bringing from one to two cents, but at this writing there is not enough for shipping purposes, what few there are being taken by the local trade.

The glut of sweet peas has subsided and is more nearly normal, but, like everything else, the price is whatever they will bring. Peonies are a thing of the past as far as demand is concerned, and those remaining in cold storage look like almost a total loss, as nobody wants them. Carnations are in the same boat, are small and soft and have little call; in fact, the market has reached that stage of summer dullness where everyone is simply waiting for the fall season to start.

NOTES.

W. A. Reiman, who was in the city this week, is very enthusiastic on the subject of peonies and outdoor flowers generally. The soil at Vincennes, Ind., where his peony farms are located, is a fairly heavy clay, in which, when once the plants are established, they make a magnificent growth. Mr. Reiman is going largely into bulb planting. He will go heavily into narcissi and will try out lilies and, if they turn out well, he will increase his plantings. Enthusiastic and willing to launch out into any promising scheme, he deserves all the success he is getting in his business.

Wm. Murphy, Cincinnati, O., circulated around the market the early part of the week getting orders for advertising banners from the local men for display at the S. A. F. convention. Mr. Murphy reports that everything will be in readiness on August 17, and that all arrangements have been completed for showing the boys a good time, and that a record-breaking attendance is looked for.

C. L. Washburn and a party of friends will be the guests of O. P. Bassett on an automobile trip to Lake Minnetonka next week. They will start from Hinsdale July 27 and expect to be gone about a week.

J. J. Waaland, of J. J. Waaland & Co., Findlay, O., was on the market the early part of the week on his way to Iowa, where he will spend a two weeks' vacation. He says they have sold more palms this year than in the past three years.

A. R. Urion is the new president of the board of education. The trade should perfect their plans to call on the board when it reconvenes in the fall and place the matter of flowers at school exercises before it.

W. W. Abrahamson has given up his cut flower business and associated himself with M. Shattls as selling agents for the ribbon house of Lyon & Co. They are doing business as the Abrahamson-Shattls Co.

Chas. Schneider, doing business as the Central Floral Co., 68 State street, has closed his doors and filed a petition in bankruptcy. It is understood that he owes about $5,000 on the flower market.

Nick Wietor, of Wietor Bros., returned on July 20 from a two weeks' fishing trip to Tomahawk lake. Nick is pretty well browned up and brings back some wonderful fish lore.

The Geo. Wittbold Co. reports that its outside work is keeping up remarkably this year and the volume of business is almost four times as great as that of last season.

S. D. Dysinger, of Holm & Olson, St. Paul, Minn., was in town July 20 enroute to Buffalo, where he has been called by the serious illness of his mother.

The committee on arrangements for the Florists' Club picnic met at Zech & Mann's Wednesday evening, July 21, and completed final arrangements for the picnic July 22.

J. H. Prost, city forester, has returned from the east. He is reported bringing tree seeds with him and disposed to have the city start a nursery.

Uncle John Thorpe died July 15. Further particulars and a sketch of his career will be found on pages 1314 and 1315.

President W. E. Kelly of the Horticultural Society is on the sick list at his country home in Oconomowoc, Wis.

Joe Foerster, of the J. B. Deamud Co., returned July 20 from Canada, where he went to bury his father.

Fred Meyer, foreman for the Geo. Wittbold Co., leaves next week for a vacation trip through Indiana.

Otto Goerisch, with A. L. Randall Co., leaves July 24 for Paw Paw lake, to be gone two weeks.

Vaughan's Seed Store received the first carload of Lilium Harrisii July 20.

The Jensen & Dekema greenhouses are reported out of commission.

Visitors:—Edward Roehrs of Julius Roehrs Co., Rutherford, N. J.; S. D. Dysinger, with Holm & Olson, St. Paul, Minn.; Mrs. Spickerman of the Sandwich greenhouses, Sandwich; Wm. A. Reiman, Vincennes, Ind.; C. C. Arnold, Manchester, Ind.; H. E. Philpott, Winnipeg, Man.; J. J. Waaland of J. J. Waaland & Co., Findlay, O.; Wm. Murphy, Cincinnati, O.; J. D. Carmody, Evansville, Ind.; — Fischer, a carnation grower with Wm. Blackman & Sons, Evansville, Ind.; Wm. Metzger, Winona; G. J. Murphy, Manistee, Mich.; H. M. Burt, Battle Creek, Mich.

Lake Forest Show.

The third annual exhibition of the Horticultural Society of Lake Forest, Ill., was held at that place July 21. The display of flowers, fruits, vegetables and plants was very fine and the exhibition on the whole was a great improvement on its predecessors. The trade exhibitors included the Julius Roehrs Co., Rutherford, N. J., orchids and ornamental foliage plants. Vaughan's Seed Store, Chicago, hardy herbaceous perennials and greenhouse stock; Swain Nelson & Sons Co., Chicago, specimen shrubs. A. B. Dick's collection of stove plants, including many handsome fancy leaved caladiums, was especially noteworthy. Trade visitors included Ed. Roehrs, of the Julius Roehrs Co., Rutherford, N. J., Alex. Rennie representing A. H. Hews & Co., Chicago, Geo. Sykes, of the Lord & Burnham Co., Chicago and Carl Cropp of Vaughan's Seed Store. The judges in flowers and plants were Geo. Woodward, Chicago, Wm Longland and C. H. Gebhard, Lake Geneva, the awards in vegetables being made by Chas. Reardon, Chicago, and Robt. Sampson and Axel Johnson, Lake Geneva, Wis.

DIXON, ILL.—C. H. Fallstrom has opened the Dixon Flower Shop at 106 East First street.

COLFAX, IOWA.—W. H. Drake, formerly of Kenosha, Wis., is now with the Hotel Colfax.

CALUMET, MICH.—Miss Jennie Williams of Laurium has accepted a position with the Lakeside Floral Co.

ROSEMONT, PA.—Gordon Smirl, for 16 years head gardener at Joseph Sinnot's place, has resigned his position there owing to the fact that, since the death of Mr. Sinnot, this gentleman's widow does not wish to carry on the place so extensively. Such an excellent gardener and successful exhibitor as Mr. Smirl should not be long out of a good position.

CHARLOTTE, N. C.—E. Scholtz has purchased the Dilworth Floral Gardens from John and James L. McPhee, and in the future the floral interests will be controlled by one concern. Edward Scholtz is an expert in his line and has one of the neatest and most attractive floral display houses in the state. The Messrs. McPhee will return to their old home in Canada.

☛ NOTICE!

Manhattan Flower Market WHOLESALE FLORISTS

Telephone: 1016 Madison Sq. 46 W. 28th St., NEW YORK

Ship us some stock. We need a large supply of all kinds of flowers, **Roses, Carnations, Sweet Peas, Narcissus, Summer Stock, etc.,** for our new store. Reliability and responsibility first-class. Good prices and prompt returns. Good opportunity.

New York.

GOOD STOCK SCARCE.

The wholesale district is very quiet. Good rose stock is scarce, but the demand being light and plenty of ordinary stock about, but little attention is paid to that fact. A few carnations have held out to meet the asters, but they are very small, though finding favor with many in preference to the latter. But few good asters are coming in, the dry weather having a very bad effect on the crop as well as on the sweet peas, which are growing scarcer in the market. There were local showers on July 18, but there has been no general rain, and Long Island and other sections in proximity to the city are suffering from drought. The redeeming feature of the weather situation is its coolness, July 19 being particularly so. Gladioli in considerable quantities are now on the market, and when the output of the big farms begins to arrive we may expect a glut. It seems unfair to the small growers that this market should be annually flooded with the product of scores of acres of gladioli, since the flowers at such places are merely a by-product, the business, supposedly, being carried on for the multiplication and sale of the roots. In contrast to the above may be cited the case of the Cottage Gardens Co. during the peony season. That company could have placed on this market thousands of choice blooms, but it was not done.

NOTES.

R. O. King, of the King Construction Co., is in town. He is very much pleased with the building outlook. He has just completed a house 54x570 feet for the John Young Co., Bedford. Mr. Young is very enthusiastic in regard to the new house, as he has a right to be. The King company has also just completed several houses for John N. May, Summit, N. J., and others for Thomas Young, Jr., Boundbrook, N. J. This speaks well for the King style of construction, and Mr. King has almost decided to open an office near to the busiest marts of trade, as his firm has several more prospective orders in sight.

John Fitzsimmons, head of the firm of Fitzsimmons & Rooney, of 161 Court street, Brooklyn, is one of the oldest retailers in this city. He has conducted a store at the present location for 40 years. Though 77 years old, he is always to be found at the store, and when occasion requires he pitches in and works like one of the boys. He has interesting reminiscences of the past generations of florists. In speaking of the former firm of Dailledouze, Zeller & Gard, which introduced carnations into this country, he recently said: "They were all good men and good friends of mine."

We learn that John P. Scherer, of Union Hill, N. J., and Felix J. Bernstein, formerly a retailer of this city, have formed a partnership and incorporated, and about September 1 will open a store at 106 West Twenty-sixth street, to deal wholesale in florists' greens and supplies. The firm name will be Scherer & Co.

Chas. Haberman, of 2668 Broadway, is one retailer who does not get into the doleful dumps when the summer dullness arrives. On a recent visit we were struck with the fine display of flowering and foliage plants in front of his store. He has recently executed a large amount of funeral work.

It is rumored that a retail store will soon be opened on Broadway by an actress. We have known for some time that there were some pretty good actors in the business, so the advent of this lady will greatly help to round out the attractions.

Charles Zeller & Son, who have two ranges in Brooklyn, have sold the one on Clarkson street, Flatbush, to Louis Schmutz, Sr., though we understand that they will retain possession until the beginning of another season.

John I. Raynor, in addition to a good general stock, is now handling large lots of fine lilies; in fact, his store is the Twenty-eighth street headquarters for lilies.

John Seligman left, July 17, for an extended sojourn among the Thousand Islands. During his absence Jos. J. Levy will be boss.

Greek meets Greek at Witzel's Point View grove, College Point, July 29, to drive dull care away at their annual picnic.

The store of the Newman Floral Co. (Inc.), at Fifth avenue and Madison square, has been closed.

Glen Cove, N. Y.

The Nassau County Horticultural Society held its regular monthly meeting in Pembroke hall July 14. President Everett occupied the chair. The secretary read communications from the following ladies and gentlemen and seed houses offering special prizes for the fall show: Mrs. J. Barnes, Oyster Bay, $10; Mrs. Bucknall, Glen Cove, $5 for a vase of Winsor carnations; Mrs. Smithers, Glen Cove, a vase for the best collection of outdoor flowering chrysanthemums, the vase to be won three times before becoming the property of a competitor; Stumpp & Walter Co., $10; J. Roehrs, $10; P. Henderson, $10; Rickards Bros., $10; H. Weeks, Seacliff, $5. The judges for the monthly competition were Messrs. Johnston, Duthie and Garrett. The awards in the points competition were as follows: V. Cleres, 85 for vase of poppies; P. Reul, 82 for sweet peas; H. Gant, 78¼ for antirrhinums; G. Wilson, 75 for fuchsias. G. Wilson, G. Ashworth and P. Reul were each awarded a cultural certificate for sweet peas. For a vase of platycodon and Stokesia cyanea, J. Drombosky received honorable mention. H. J. Trepass and V. Cleres received a like award for cucumbers and sweet peas, respectively. The society is to join Tarrytown Horticultural Society in its outing to Rye Beach August 11.

The summer show, which was held on June 23, was a success. Quite a number of residents visited it during the afternoon and evening. C. H. Totty, Madison, N. J.; H. J. Turner, Port Washington, and Wm. Marshall acted as judges. Their awards follow:

Collection of tea roses—J. F. Johnston, first; H. Fleishhand, second.

Vase H. P. roses—J. Parton, first; J. Ashworth, second; H. F. Fleishhand, third.

Twenty-five roses—H. Gant, first.

Vase climbing roses—H. Gant, first.

Collection H. teas—J. F. Johnston, first.

Collection of sweet peas—A. Mackenzie, first; Wm. Fleishhand, second.

Best three vases sweet peas—W. Fleishhand.

Vase herbaceous flowers—A. Mackenzie, first; P. Andevart, second.

J. Everett was awarded a cultural certificate for a collection of roses. J. Holloway, cultural certificate for collection of herbaceous flowers. P. Keul was awarded a cultural certificate for Gladiolus America and Augusta. One of the most interesting features of the show was a vase of Gerbera Jamesoni shown by A. Jaenicke, Floral Park.

The yellow seedling carnation which I stated in error in my note of the June meeting was grown by J. Trepass should have been credited to Wm. Eccles. W. H. M.

New York to Cincinnati.

The transportation committee of the New York Florists' Club announce that arrangements have just been made with the New York Central lines to provide a special train to leave New York (Grand Central station) as a second section of the "Second Empire," 12:40 p. m. Monday, August 16, 1909, stopping at Albany at 3:57 p. m., Utica 6:04 p. m., Syracuse 7:15 p. m., Rochester 9:05 p. m. and Buffalo 11:15 p. m., due to arrive in Cincinnati 10:45 a. m. next day. The train will consist of buffet library smoking car, dining car and high-class standard Pullman sleeping cars.

It is expected that the Boston and New England delegations will join our party at Albany, and up-state delegates at Utica, Syracuse, Rochester and Buffalo, traveling together on the same train. The fare from New York to Cincinnati will be $15.15 (provided 10 or more travel together), and fares from other points will be quoted upon application. The Pullman fare for double berth, New York to Cincinnati, is $4; section, $8; stateroom, $11.50; drawing room, $14. Applications for reservations should be forwarded to John Young, secretary, 51 West Twenty-eighth street, who will assign space in sleeping cars in the order in which applications are received.

TRADE VERY DULL.

There is but little change in the situation, business being very dull. The stock is good for the season, new crop American Beauty, My Maryland, Carnot and Kaiserin roses showing up well. Asters are now becoming a factor, and with these and the roses, together with the showy gladiolus, there is a fair showing in most of the boxes of the retailers. Lily of the valley is grading better and the orchid supply is equal to the demand. Recent thunder storms and local showers have helped the outdoor stock. Sweet peas are more plentiful and coming in better shape. There is quite a lot of stock shipped for out-of-town demand, the seashore resorts buying largely for Saturday and Sunday business.

BUILDINGS UNDER WAY.

The busy men at this time are the builders. The Robert Craig Co. has finished glazing the new houses at Norwood; the erection of this range has been done in double-quick time and the benches are all planted with carnations, fine stock plants that had been growing in pots outdoors. When fully completed this will be an ideal place, as several new ideas in heating, ventilating and other time-saving arrangements are being tried out with every chance of success. At the Florex Gardens the large house is about one-fourth completed; one end is in and about 180 feet in length is up and glazed. Improvements in the bracing and framework of the roof makes the roof present a very even surface such as is seen in the usual smaller structures. The large scaffolding is used alike by all the different hands engaged in the erection; those who fit the iron framework together give way to the carpenters, who fit the sash bars; then the heating gang attach the steam pipes, which are all suspended from the roof; these are followed by the glaziers, who are doing rapid work, keeping up with and, in fact, sometimes waiting for others. There are but two men engaged in laying the glass, each having two boy helpers, who put in the putty and hand up the glass, which is set at the rate of 30 boxes a day, size 16x24. The large scaffolding is bolted together in sections and men are constantly taking from one end and adding to the other, there being no stoppage in construction as the work goes on. A heavy windstorm on Sunday last gave the unfinished work a severe test, but a careful examination failed to show any damage whatever. The two large houses, 35x300, at John Welsh Young's new place at Roslyn Heights are completed with the exception of the heating arrangements and planted with roses, the assortment comprising American Beauty, My Maryland, Richmond and white and pink Killarney.

NOTES.

M. Becker, of the Avondale Floral Co., of Cincinnati, was a visitor this week. He speaks enthusiastically of the convention spirit in his city and predicts it will be the largest in the history of the society.

We read with pleasure the letter of Willis N. Rudd, the genial secretary, in reference to the elaborate preparations that are being made for the comfort of the delegates.

McKissick is carrying an exceptionally fine stock of imported and new crop local-grown American Beauty roses. Easter lilies are also good.

The Leo Niessen Co. offers as a leader a fine stock of asters, high-grade flowers; new crop American Beauty roses are also a feature.

B. Eschner, representing M. Rice & Co., expects to start on his western and convention trip next week.

K.

Faculties of Plants.

CONCLUDED—SEE PAGE 1104, ISSUE JULY 3.

A large number of species of plants has become sensitive to the touch or blow of a solid object in a manner broadly analogous to the touch reactions of animals. One form of this reaction is exhibited by plants which climb by the aid of tendrils. Tendrils are generally long, slender organs sensitive on one surface only, although in some species the percipient cells cover the entire surface. When one of these organs comes into contact with a solid object the outer sensitive cells are stimulated and communicate an impulse to cells not far distant and curvature ensues within a second, or a few seconds at most, which generally results in curling the organ around the object. Singularly enough these organs distinguish between a touch and a blow. The rudest shock or jar does not set the tendril in action, so long as the sensitive cells do not receive a pressure of some continuity, but the most delicate contact of the smallest object will cause stimulation. Thus a bit of spider's thread or the finest silk fiber weighing not more than the fiftieth of a grain will serve to excite curvature. Water, or even as heavy a liquid as mercury, will not cause curvature when poured over a tendril, but if minute particles of chalk are suspended in the water the repeated contact of these bodies will set up a reaction. This is, in fact, an appreciation of the difference between pure and muddy water, which is probably beyond the capacity of any organ of touch of the human body. After a tendril has grasped a support by means of the above mechanism, the free portion of the organ is thrown into a corkscrew, which has the effect of pulling up the stem and anchoring it by an elastic spring.

THE SENSITIVE PLANT.

The sensitive plant (mimosa), a small decumbent shrub native to the tropics, offers a striking illustration of another form of sensitiveness to mechanical stimuli, by which shocks and blows, but not contact are appreciated. The base of the leaf-stalk is attached to the stem by a highly developed pulvinus, or motor organ. The slightest shock or jar will cause this motor organ to act, and the leaf is quickly dropped through an arc of 90 degrees. If a stronger stimulus is given, an impression is conveyed up and down the stem to other leaves, and the effect of a single snip of the scissors on a leaflet may be transmitted through a stem a yard in length at a rate of a third of an inch per second, in a manner highl reminiscent of the action of nerves.

The space at command does not allow even a simple description of all of the capacities for adjustment to the external world displayed by plants. In addition to making external responses, or reactions to external forces, a perfect correlation exists between the different organs by which efficient co-operation is secured. Nowhere is this better illustrated than in the common poppy. During the growth of the flower stalk and bud, they are held in the form of a shepherd's crook with the bud pendulous from the tip. When the innumerable divisions and the complicated quadrille of the chromosomes in the ovary of the flower have finally brought the precious egg-cells to a stage where they are ready to receive the chromosomes from the elongating pollen-tubes, the completion or attainment of this stage results in a signal being sent to the curved stalk a few inches away, and it quickly straightens; as the bud expands simultaneously the saucer-shaped flower opens and faces the sky ready to receive the fertilizing pollen. Once this is received the changes ensuing result in sending off a second signal to the motor zone of the stalk and the curvature reforms the shepherd's crook, which holds the capsule pendulous to drop the seeds when mature.

In no instance, however, does the activity of the plant involve choice or decision, or anything except the most generalized form of consciousness. The sensory functions are purely reflexive, and there is no central organ where impressions are received, and from whence signals are sent out, but the percipient organs themselves send impulses direct to the motor tracts.

NOT DEGENERATES.

It is to be seen, therefore, that plants are not degenerates, nor are they lower than animals in any sense; no matter what development they may achieve, or what progress they may make in improvement, they become more widely separated from the animal. Instead of being a lower branch of the phylogenetic tree which has produced animals, they form a separate phylum arising from the common substratum of primitive protoplasm. They constitute a distinct group following a path widely divergent from that of animals, and make the numberless adjustments necessary to their continued existence by a set of sensory faculties wholly characteristic.

The Birth of a Classic Rose.

In the matter of rose ideals, says a writer in the London Times, the public shows a rather curious unconcern. It accepts the last novelty with conviction, but of the rationale of raising new varieties it knows nothing; it does not know the names of the raisers, men who are benefactors of their race in a way that might be envied by some of much larger report in the world. The perseverance and long-sighted care, the methodical acceptance of disappointments, the gift of catching at happy chances, all of which go to the making of a memorable new rose, have their own reward, perhaps, when once in a dozen years or so a star of the first magnitude, a Gloire de Dijon, a Jacqueminot, a La France, rises upon the rosarian horizon. The rewards of the patient workers at crossing and proving are, in terms of fame at least, quite incommensurate with their best achievements. They might be larger if the duties of the hybridist and the ethics of his art were better defined and understood.

In the order of roses alone there is a saddening tale of misdirected energy in the innumerable names which fill the lists of novelties and drop into oblivion year by year. The rare event of the birth of a classic rose, a "type" which survives the incessant "improvements" of the shows, must have set against it the wilderness of rubbish, the coarseness, the meretricious form, the repugnant color, the difficult habit. We want a recognition of some canon of taste in rose raising, as in all horticultural development. At least, certain principles might be kept in view, such as the necessary connection between bigness and hardiness and the elements of purity in tint, and the question might at least be moved whether there is not for roses, as for men, a proper size and stature, beyond which they are gigantic and altogether uncomfortable.

A hybridist with a spark of imagination in him might reach unsuspected heights, but let him always bear in mind the origins from which he works, the genius of the wild stock, which will not suffer itself to be improved indefinitely in every quality. No richest specimen, at its prime in the June garden, broad-blossomed, symmetrical, glowing with color, thick-petaled, should make him forget the wild dog-rose's infinite delicacy of texture, of hue, of scent, the treasure which he takes away from his first seedling with one hand while with the other he makes it put new glories on.

NO SIGNS OF ACTIVITY.

Midsummer quietness now governs the situation, and there are no signs of activity. The departure and return of vacationists may be easily noted when, between the lulls of momentary business, one of the happy pleasure-seekers may be seen surrounded by an admiring group of listeners. The market is showing unmistakable signs of shortening up and there is no particular stock which cannot be spared for a time at least without beneficial results. Roses are in the same poor condition as for the past few weeks, and the sale for this class of goods has narrowed down to unusual limits. A good line of American Beauty is still available and offers the best value of the collections, running in price from $12 to $25 per 100. Kaiserin is especially adapted for funeral work and is perhaps the best profit yielder. Carnations are dropping out quietly and prices are strengthening up somewhat as a consequence. There is no demand except for working stock, and growers are now losing no time with the first and most important steps identified with next year's goods. Easter lilies, callas and gladioli are in splendid condition. The lily supply is rather unusual, but the goods are of the right quality and find plenty of openings. Sweet peas are in better shape than they have shown before this season and a number of new and attractive varieties have greatly aided the selling of the ordinary crops. Asters are seen scattered about here and there, but have not become sufficiently strong to be considered a market factor yet.

NOTES.

E. Rogean, of the Park Street Market, is one of the summer adventurers, having ambled to the provinces for rest and recreation. As a result of his untiring attention to business "Ed" is pretty well run down and after two weeks at Maspec, N. B., we may expect to see him return splendidly equipped for next season's strain.

Frank Reynolds, for the past four years with N. F. McCarthy, has severed his connection with this firm and is now acting in the interests of several growers, for whose goods he is the sales agent, with headquarters at the Music Hall Market.

Manager W. J. Thurston of the Park Street Market has fortified himself in sight of the fishing grounds, and for the next two weeks may be found

Fred Becher is sending to market from his Cambridge conservatories a timely crop of splendid Easter lilies, which have been out of the market for the past few weeks, and are a welcome addition.

B.

Massachusetts Horticultural Society.

SWEET PEA SHOW, JULY 17 AND 18.

The following were the awards for plants and flowers: Gratuities, Morton F. Plant, sweet peas; Mrs. F. S. DeLue, sweet peas; Wm. Whitman, sweet peas; Francis Skinner, sweet peas; W. A. Riggs, sweet peas; W. J. Clemson; sweet peas; T. D. Hatfield, new sweet peas; Langwater Gardens, sweet peas; Giraud Foster, sweet peas; Bellevue Nurseries, herbaceous plants; Oldtown Nurseries, herbaceous plants; F. J. Rea, herbaceous plants; W. A. Riggs, herbaceous plants; Mrs. A. W. Blake, hollyhocks; Mrs. J. L. Gardner, hollyhocks and other flowers; Wm. Whitman, zinnias; Mrs. E. M. Gill, display.

Bronze Medal:—R. & J. Farquhar & Co., display of Japanese iris.

Honorable Mention:—W. A. Riggs, seedling delphiniums; Giraud Foster, sweet peas, Countess of Northbrook and Mrs. Geo. Higginson, Jr.

Vote of Thanks:—Walter Hunnewell, Browallia speciosa major, in pots; R. & J. Farquhar & Co., callas and amaryllis.

LENOX, MASS.—Miss Adele Kneeland, having received so many requests to visit her garden, has issued tickets for the purpose, the money received for these being given to charity.

DESIGNS OR CUT FLOWERS

Will be delivered for the trade in other cities by the firms below, the Leading Retailers in the cities indicated, on Wire, Phone or Mail Orders.

Colorado Springs, Colo.
FRANK F. CRUMP,
Wholesale and Retail Florist.

Anderson, S. C.
THE ANDERSON FLORAL CO.
533 MARSHALL AVE.

Omaha.

After a most disagreeable June and first part of July, we are having now real summer. Previous to this we had rain and storms almost every day, and the consequence was very little outdoor work could be done and the weeds had their own way. Outdoor flowers suffered both from rain and weeds, especially sweet peas. The growers are rushing planting now and the roses are almost all planted.

On June 23 Miss Casey May Arnold was married to a gentleman from Chicago; it was a church wedding, one of the events of the season. Miss Arnold will reside in Chicago and take with her the well wishes of everyone here. Miss Arnold was perhaps the hardest worker in a florist store for the last 15 years and leaves a well-established business here.

Herman Bros. Co. is already cutting some young stock from May planting and find a ready market for it. Ten days ago we almost had another hailstorm; it struck Florence, the north end of the city, and did lots of damage to the small fruit growers' places.

Vacations are now on. Mrs. L. Henderson is spending her vacation at Wausa with her folks. Mrs. Hess and children are in the mountains of Wyoming. J. F. Wiler and family went for an auto ride to the lakes of Minnesota.

On July 18 Miss Clara Hildebrand was married to a gentleman from South Dakota. Miss Hildebrand was for many years with Hess & Swoboda.

Miss Tinelson and Miss Dam, both with Hess & Swoboda, are going to Colorado. F. Hofmann spent his vacation in South Dakota.

On July 29 the Florists' Club will hold its annual picnic at Lake Manawa. A good time is promised.

GRIPPE.

Argos, Ind.

The Northern Indiana Florists' Association will hold its annual meeting at Winona Lake Tuesday, July 27, for the purpose of electing officers and attending to other business that may come before the association. Every member and all other florists of northern Indiana who wish to co-operate with the association are requested to be present. Those arriving in the forenoon will get off at Warsaw and visit the greenhouses north of the city, take lunch in Warsaw, then go to the park, where the meeting will be held, after which we will visit the park greenhouses and other places of interest.

W. E. H.

LISBON, O.—J. W. Scott is building a greenhouse 18x75 feet. The John C. Moninger Co., of Chicago, is furnishing the material. A large brick smokestack is also in course of erection.

NEVADA CITY, CALIF.—A new greenhouse is being built at the State Agricultural School at Davis. When complete it will be under the charge of Thos. Wilson, formerly a gardener at Grass Valley.

The Seed Trade.

American Seed Trade Association.

J. C. Robinson, Waterloo, Neb., Pres.; M. H. Duryea, New York, First Vice-Pres.; F. W. Bolgiano, Washington, D. C., Second Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas.; Leonard H. Vaughan, Chicago, Asst. Sec'y. Twenty-eighth annual convention, June, 1910.

PUGET SOUND cabbage seed crop promises well.

SOME damage has been done Nebraska seed crops by hail.

SALT LAKE CITY vicinity will produce garden peas successfully.

RED TOP growers report prospects for a very fine quality of seed this year.

NEBRASKA CROP REPORT. — Watermelons looking good, corn likewise; cantaloupes do not promise well.

A CHARTER was issued at Philadelphia, July 10, to the Philadelphia Seed Co. The capital stock is $5,000.

SAN JOSE, CALIF.—It is understood that the Braslan-Pieters differences have been adjusted by the sale of the former's interest to the latter July 17.

SECRETARY KENDEL, of the American Seed Trade Association, reminds members of the availability of its new legal bureau for all data concerning seed laws of various states.

GARDEN SEED retains its vitality much better on the Pacific coast than in the eastern states. Some Globe onion seed as well as some bush lima beans are stored there this summer.

THE crop of French Roman hyacinths proved lighter at harvest time than expected and the French growers secured a few francs advance on those orders which were not closed until after digging time.

MICHIGAN bean growers report severe drought along the eastern and northern border of that state. This, following late plantings, will cut down the yield. An early rain would, it is said, help some of the late crops.

TOLEDO, O.—E. W. V. Kuehme and E. N. Crumbach have taken W. R. Hadnett and F. R. Moorman into partnership. Articles of incorporation have been taken out and the firm is known as the Crumbach-Kuehme Co.

WAKEMAN, O.—C. S. Clark, seed corn grower, advises us that on July 17 a heavy hailstorm in that locality did considerable injury to the growing corn crops. The exact extent of the damage he was unable to estimate at that writing.

ADVICES from Denmark are to the effect that all kinds of root seeds will be scarce this year as the roots were much damaged during the winter.

FRENCH BULBS on the S. S. Venetia, which sailed from Marseilles July 16, are expected to arrive at New York about August 1, some of the consignments being quite considerable.

ON August 10 at noon a government report will be issued showing conditions, among others, of the following crops: Beans, sugar-cane, sorghum, peanuts, clover, alfalfa, timothy, millet and bluegrass seed.

J. C. ROBINSON and C. H. Coy were Chicago visitors Friday on their way home from the seed trade convention and a visit in the east, taking in the suburbs of Boston. They narrowly escaped a serious automobile accident at Marblehead.

F. R. PIERSON, chairman of the tariff committee of the S. A. F., reports receiving a letter July 10 from Senator McUmber with copy of printed bill showing the final acceptance by the senate of the revised schedule exactly as submitted by him in Washington.

BELLINGHAM BAY, WASH., July 10.—The United States Department of Agriculture bulb farm is in charge of Henry Jueneman, who with one assistant is working this year about 1½ acres in bulbs. He claims Narcissus Von Sion can be successfully produced here of fine color and free from splits. Hyacinths and tulips are now ripe.

MONTPELIER, O.—W. C. Heller & Co., manufacturers of mice-proof seed cases, bins and seed store fixtures, have opened a branch at 220 Wyandotte street, Kansas City, Mo., where they carry a complete line of their goods ready for immediate shipment, and invite all seedsmen to make their headquarters at their office while in Kansas City. They have also just issued a complete catalogue of their goods, which will be sent on receipt of a postal to anyone interested.

CHICAGO.—The trade here was greatly shocked to learn of the death by drowning on Sunday last of C. W. Smith, a traveling salesman for the S. F. Leonard Seed Co., and a brother of A. H. Smith of the same firm. The sad accident occurred on the beach not far from his home, 5116 East End avenue. Deceased was 33 years of age. Onion sets will not suffer from present fairly dry weather, so far as quality of the crop is concerned.—A. T. Ferrell, of Saginaw, Mich., who has been at a hospital here for a minor operation, left for home July 15.—Leonard H. Vaughan has returned from the coast.

American Seed Trade Association.

REPORT OF THE OBITUARY COMMITTEE.

Again we have to record the death of beloved friends, members of this association: Through the death of Charles Linnæus Allen, of Floral Park, N. Y., we lost the oldest living member and one of the charter members of the American Seed Trade Association. Mr. Allen always took an active interest in the welfare of this organization. Our records are replete with papers written by him that show his great knowledge of floriculture and his love of all that is beautiful in nature and best in man.

Warren W. Rawson, of Arlington, Mass., was a man of indomitable energy; he was the largest market gardener in New England and a pioneer in advanced methods of market gardening. His writings are considered an authority on the subject.

Stevens W. Flower, of Toledo, O., was a liberal Christian gentleman, of whom it is commonly said that when he passed to his reward "Toledo lost one of its most honored and charitable citizens."

Our necrology for the past year would be incomplete did it not include the honored name of E. V. Hallock, of Queens, N. Y., a noted florist, botanist and horticulturist, and a former member of this association. His genial personality and extensive knowledge of the subjects in which we are all deeply interested will be greatly missed by the members of this association.

We mourn the loss of these friends and associates; we are thankful they have lived and we honor and would emulate their virtues. We extend to their families our sympathy in their bereavement.

CHAS. H. BRECK,
MARSHALL H. DURYEA,
W. T. PHILIPPS,
Committee.

Danish Root Seed.

Formerly the root seed used in Denmark was imported from Scotland and Germany, but Danish agriculture, its advanced position being well known, could not in the process of time feel satisfied with this seed. The government is supporting home grown produce by directing a competition amongst the most efficient growers and those whose stocks prove to have attained the highest refinement and are yielding the most valuable clear profit are awarded a first class certificate. Every second year a competition at the government's experiment-station is thrown open, and to retain this certificate the grower must work forward on the refinement of his stock. By comparative trials of cultivation of this seed and of German, Scottish and English seeds, the Danish seed of first class will come forward in a striking manner, not only with regard to its beautiful typical form and smoothness but also on account of its high percent of dry matter (nutritive substance in kilo or hectar) and by being free from stock-runners. The government's experiments have proved, that a first class stock of Danish seed, for instance Barres Sludstrup stock, gives an extra profit of about 50 kroner per Danish acre, so it will certainly pay to use first class Danish stocks.

Imports.

During the week ending July 10 imports were received at New York as follows:

Maltus & Ware, 5 cases plants.
H. Nungesser & Co., 450 bbls. seed.
P. Henderson & Co., 5 bags seed.
To others, 25 cases plants, 953 bags seed.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary. Next meeting in Ashtabula, O., October 12, 1909.

PUSH on with the preparation of the manure and covering for mushroom beds. Keep the hose going on it while turning if it appears to be too dry and avoid over-heating.

ONE New York commission merchant is said to have supplied one of his shippers with wrappers for his melons with the result that out of a shipment of 10 cars of cantaloupes this season the shipper's returns are more than $1,500 more than they would have been had he not used the wrappers.—Market Growers' Journal.

MANURING FOR POTATOES.—The advantage of using natural and artificial manures in combination in potato culture receives further confirmation from the experiments that have been conducted at the University College of North Wales, Bangor. According to the official report, good crops were produced by the use of farmyard manure alone, and by artificial fertilizers alone, but the best crops were produced on land that received a moderate dressing of the former, supplemented by a suitable mixture of the latter.

New Tomato Disease.

The British Board of Agriculture has published a leaflet with reference to a new tomato disease which has recently appeared and which, it is believed, has been introduced from abroad. The fungus which causes the disease is closely related to the leaf-spot disease on strawberries, apples, pears, and chrysanthemums, but is quite distinct from any of these diseases. The plants attacked show small, blackish-green spots on the leaves. These are rapidly killed, roll up, and hang loosely from the stem. The fungus also attacks the stem, the calyx, and finally the fruit itself. Plants once attacked can only be saved by spraying immediately the first signs of disease are noticed.

The Late Blight of Potatoes.

In the course of an admirable and beautifully illustrated account of the prevalent plant diseases in New Zealand, Mr. Cockayne, assistant in the division of biology and horticulture, makes some interesting observations on the origin and mode of distribution of late blight of potatoes (due to Phytophthora infestans). According to Mr. Cockayne (Annual report, New Zealand Department of Agriculture, 1908), no precise record exists as to the date of introduction of the phytophthora disease into New Zealand, though it would appear to be of comparatively recent importation. At the time of the severest epidemic in 1904 Professor Thomas stated that the disease had appeared, though in a less virulent form, 20 years earlier.

Mr. Cockayne adopts the view that the fungus hibernates in the resting tuber, and when conditions are favorable spreads therefrom to the leaves, where it gives rise to spore-bearing branches, which bear the well-known spores. Whether the tubers are infected through the stem or by means of spores germinating in the earth the writer is not prepared to say, though he inclines to the view that both modes of infection occur. Mr. Cockayne draws attention to the fact that tubers infected with phytophthora may become rotten rapidly or may show no sign of rot. In the absence of readily recognizable symptoms of disease (as in the latter case) such infected tubers are doubtless used for "seed" and provide so many centers for spore manufacture, and hence, for the dissemination of the disease. If, again, climatic conditions remain unfavorable, no external sign of disease is given, though the tubers of the plant formed from the infected "seed" in turn contain the hibernating mycelium. That some such course of events takes place is rendered probable by the well-known fact of the rapidity with which the disease declares itself whenever a spell of moist, warm weather coincides with the later period of the growth of the potato. More thorough-going investigation of the obscure phases in the life history of this fungus pest is much to be desired.

Experiments in spraying with Bordeaux mixture might be given a rest for a time—since the efficacy of Bordeaux mixture as a check to the dis-

Lilium Harrisii, Now Ready for Delivery :: ::

Our first consignments have just reached us, and we are now filling early orders. **Easter comes very early next year, March 27th,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered both in regard to purity and freedom from disease and not the late type now so often furnished.

6- 7-in. bulbs, 350 to the case.....$ 6.00 per 100; $ 55.00 per 1000
7- 9-in. bulbs, 200 to the case..... 9.00 per 100; 85.00 per 1000
9-11-in. bulbs, 100 to the case..... 20.00 per 100; 180.00 per 1000
Full case lots at thousand rate.

Large Specimen Hydrangeas

In tubs and half-barrels. For July and August flowering.

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season; flowers are just beginning to show color. Extra fine plants in tubs, $3.00 each; very large specimens in half barrels, $5.00 and $7.50 each.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

ease has been demonstrated a hundred times—and in place of such unnecessary repetitions some of our horticultural institutions might turn their attention to the elucidation of the modes of perpetuation of this pestilent late blight.—Gardeners' Chronicle.

Small Holdings in England.

At this time, when so much effort is exerted to induce men to go back to the land, and thus arrest the flow of population to the great cities, Consul John L. Griffiths, of Liverpool, says that it may not be uninteresting to glance at the land situation in Great Britain: In 30 years there has been a shrinkage of 2,325 in the number of small holdings—that is, farms of 50 acres and less. In the number of larger sized farms there has been little change, which is explained by the fact that in this class of holdings there are more owners and fewer tenants than in the case of the smaller areas, and a higher degree of stability has been secured. The orchard acreage has slightly increased and a larger acreage has gradually been given to the cultivation of strawberries, raspberries, currants and other small fruits.

A small-holding law has been enacted for the purpose of remedying the existing conditions. It is believed that the only solution of the land question is in providing a few acres of land which a man may cultivate, either as owner or tenant. It is desired to have as many small properties as can be secured, and it is thought if this is done the knowledge that any increase in value will directly benefit the occupier will be an incentive to the proper and scientific cultivation of the land. The garden cities which have been established in various parts of England are another manifestation of the growing movement in favor of small holdings. Lessons have been drawn from France, Germany and Belgium, where a large yield is secured from a very small acreage, and where a spirit of contentment prevails, which is at present lacking in rural England. Many urge that with a larger return for his labor and with the prospect of ultimate ownership of the land the English farmer would work with renewed energy and finer purpose. Upon the very large multiplication of small farms depends, in a great measure, the agricultural rejuvenation of England.

BOX BAY TREES

We have a fair stock of both these items, including a number of large sizes.

GEO. A. KUHL; Pekin, Ill.

Ontario Experiment Farms.

Consul A. G. Seyfert of Owen Sound, furnishes the following information concerning the Ontario Agricultural College and Experimental Farm at Guelph, and its usefulness in promoting agriculture in that Canadian province: "During 1908, 1,225 students received instruction in the various departments of the college. Besides Canadians, students attended from 18 foreign countries, the United States being represented by 22 students. The staff of instructors in the agricultural college proper consists of 35 teachers, and there are nine teachers in the MacDonald Institute, where girls are taught home economics, physiology and home nursing, domestic science, and domestic art.

One of the features of the practical work of the institution is the farmers' excursions to the college and farm during June. These are arranged systematically day after day, so that every farmer and his family in the province can spend a day at the farm and see the experimental process at first-hand. The railroads give cheap rates for these excursions, and many thousands annually avail themselves of the opportunity. The practical value to the farmer cannot be overestimated, for the information that he gains by sight and what he hears by the lectures in sight of the experimental plot during the day are of great benefit to him.

The Nursery Trade

American Association of Nurserymen.

C. J. Brown, Rochester, N. Y., President; C. M. Hobbs Bridgeport, Ind., Vice-President; Geo. C. Seagar Rochester, N. Y. Sec'y. Thirty-fifth annual convention to be held at St. Louis or Denver June 1910.

CHIEF FORESTER PINCHOT will deal with the lumbermen's side of topics relating to the forestry service at the National Irrigation conference in Spokane, Wash., August 9-14.

DIPLOMA, a new currant raised by the late Jacob Moore and grown by Green's Nursery Co., Rochester, N. Y., is said to be a quite phenomenal variety in point of size and quality.

CHAS. SPRAGUE SARGENT of the Arnold Arboretum has reported upon the "Trees of Commonwealth Avenue, Boston" and his report has been reprinted in a neat green covered pamphlet.

ALL the nurseries of Oregon have been cleaned out of young trees as a result of the increased acreage planted to fruit this season. The favor into which walnut culture has grown of late has caused an immense area to be planted.

THE annual report of the park commissioner of St. Louis, Mo., is a book of 50 pages well illustrated and describing the work done in the various parks during the year ending April, 1908, and recommendations for future improvements.

F. L. MULFORD, secretary-treasurer of the American Association of Park Superintendents, is again calling attention to the many pleasurable features of the trip of the association to the Seattle exposition and the convention to be held at Seattle and Tacoma, August 9-13. The particulars were given in our issue of July 3, page 119.

American Ass'n of Railroad Gardeners.

The third annual meeting of the American Association of Railroad Gardeners will be held in Philadelphia, August 24, 10 a. m. A very interesting programme has been arranged for and some of the best examples of railroad gardening in America will be inspected.

All railroad employes having superintendence of lawns, care of flowers, shrubbery and trees and the general æsthetic appearance of railroad waylands are eligible to membership, and all persons interested in this feature of railroad work will be gladly welcomed. GEO. B. MOULDER, Sec'y.

Scale on Laurel.

ED. AMERICAN FLORIST:—

Please find enclosed in separate package some branches of laurel, with some kind of scale. Please give me the name of same and say how I can get rid of it. F. A.

The specimens have been determined as the common soft scale, Coccus Hesperidum. This is a cosmopolitan pest, living outdoors throughout the tropical regions and under glass in temperate regions, and infests a wide range of food plants, sometimes doing rather serious damage. The oily washes, such as kerosene emulsion, are the best remedies known for its control. H.

Trees and Shrubs at Rochester, N. Y.

Rain is the crying need here at present. On all light sandy soils, lawns are parched and dried up, and newly planted trees and shrubs are showing the serious effects of the drought.

The staghorn sumach (Rhus typhina) was in full flower July 1, and now, July 10, the crimson panicles of fruits are beginning to look conspicuous. The Japanese varnish tree (R. vernicifera), with thin yellowish white clusters, was in bloom about the same date as the last. The smooth sumach (R. glabra) is now in full flower. The smoke tree (R. cotinus) is just now a most conspicuous feature with its showy feathery plumes. The aromatic sumach (R. Canadensis), with its red fruit clusters, is also attractive.

The silky-leaved dogwood (Cornus amomum) was in flower June 30. C.

Syringa Japonica.

Purpusi, which blooms about two days ahead of C. Amomum, when growing side by side, has been lately separated from C. amomum, and differs from it only in its much narrower leaves which are pale beneath. C. asperifolia came in bloom about July 1. C. stricta commenced to flower about July 4, and on July 10 was in fine flower. The short panicled white clusters are quite attractive. This is usually somewhat tender here, but on account of the last mild winter it is flowering freely this year. C. brachypoda has just begun to unfold a few blossoms while C. stolonifera and C. Baileyi are beginning to show a number of whitish ripe fruits.

Philadelphus Columbianus was in full flower on July 3. The six to seven white flowered clusters, about one inch across, are quite handsome. P. Gordonianus was in full flower at about the same time. P. Californicus is now, July 10, in full flower and is the last of the mock oranges to blossom here. The many flowered white panicles are very showy.

Viburnum venosum was in full flower July 3, and has now entirely passed out of bloom. This was sold for a number of years in some American nurseries under the name of V. Nepalense. The name was again changed to V. molle. It was finally named V. venosum by Alfred Rehder, as V. molle is now known to be a species localized in the southern states and quite rare in cultivation. V. venosum variety Canbyi flowers about the same time as the last.

The Japanese lilac (Syringa Japonica) was in full flower about July 3; it has been remarkably showy and has now passed out of flower. Sambucus pubens, the red-berried elder, has been displaying its showy clusters of red berries since June 30. This is an excellent, showy, berried shrub for the decoration of ornamental grounds at this time of the year. A form with yellow fruit has lately been observed in the Genesee valley in different localities. As the fruit is well developed and clear yellow, it should prove a good decorative shrub. The common elder (S. Canadensis) has been in full flower since July 6 and is now quite showy. The large, roundish, white cymes, from 6 to 12 inches across, form a most conspicuous feature on the edges of copses and in plantations, wherever they occur.

The broad-leaved linden (Tilia platyphyllos) was in flower June 25. The common European linden (T. vulgaris) was in bloom July 7, and at that time a little past its best. The elm-leaved linden (T. ulmifolia) was coming in bloom July 7, and is now in good flower. T. Michauxi and T. Americana are now partly in flower. T. Mongolica has only a few flower buds opened.

The various forms of Deutzia scabra have been very showy since June 29, and have now about passed away. D. myriantha is still in splendid bloom, and the showy pure white clusters are very attractive. Wherever this proves to be hardy it should be a good acquisition to gardens.

Lyonia (Andromeda) ligustrina is now in good bloom, and has been since June 30. The globose, whitish flowers produced in numerous clusters along the terminals of the branchlets are quite noticeable. The cranberry (Vaccinium macrocarpon) is in full flower. The reflexed, narrow petaled, blush white flowers are delicately pretty. Some individual plants of the white heather (Calluna vulgaris variety alba) have just now commenced to unfold a few white blossoms. The clammy azalea (A. viscosa), with white flowers is now in full bloom and A. arborescens is still in fairly good flower.

Hydrangea Bretschneideri, which was in full flower on June 29, is still, July 10, quite noticeable in bloom. H. arborescens variety sterilis, in which the flower clusters are all neutral, and the corollas are well developed, is now in full flower, and it is very showy, and a most valuable decorative shrub for gardens. The type form, H. arborescens, is not yet in flower. The oak-leaved hydrangea (H. quercifolia) is almost in full flower, and the large panicled clusters of fertile flowers, with prominent neutral large petaled blooms scattered over the clusters, render it very ornamental. We cannot pronounce it hardy here, but it is in fine condition with us this season.

The Chinquapin chestnut (Castanea pumila) was in full flower July 1. The common sweet chestnut (C. Americana) was in full bloom July 8, and

10 per cent Special CASH DISCOUNT. On orders over $2.00 for Flower Seeds if the cash is enclosed. 1C per cent. The discount does not apply to Asparagus Seed. Cash discount on this is 2 per cent.

Vaughan's Flower Seeds

For Summer Sowing

If you have not received our complete list of **Pansies, Primroses,** and **Perennials,** kindly write for the same.

Calceolaria Hybrida.

Our mixture is composed of the choicest selection of the tigered· marbled spotted and variegated varieties and we know will give entire satisfaction. **Trade Packet** (1000 seeds). **50c; 3trade pkts. for $1.40.**

Gloxinia Hybrida.

Vaughan's Columbian Mixture is made up by ourselves from the choicest spotted tigered edged marbled and splashed sorts of the upright and horizontal type. **Trade pkt.** (1000 seeds) **50c; 3 pkts. for $1.40.**

Mignonette, New York Market.

This is an extra choice strain of Mignonette for greenhouse culture· Our seed is greenhouse grown, raised by a most careful grower. **Packet** (about 1000 seeds) **50c; 1/8-oz., $1.50.**

Vaughan's International Primula Mixture.

This mixture is composed of the most salable colors of single Chinese Primulas We have taken special pains to make this mixture as complete as possible and unreservedly recommend it **Packet of 250 seeds, 50c; 5 pkts.** (1.250 seeds), **$2.00; per1-16 oz., $2.50.**

Pansy—Vaughan's Cut Flower Mixture.

This mixture is put up by ourselves. and contains mostly light colored sorts. We have sold this mixture for several seasons to some of our Chicago cut flower growers who have realized big returns from the sale of the flowers. Pansies are as easily grown as violets. require less care and bring better returns. **Trade pkt., 50c; 1/8-oz.; $1.00; ¼-oz., $2,00; 1-oz., $8.00.**

Vaughan's "Giant Pansy Mixture.

This mixture includes the richest red. coppers and bronzes. together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain with its delicate veinings. **Trade pkt., 25c; ⅛-oz., 60c.; oz., $4.00; ¼-lb., $14.00.**

Vaughan's International Pansies.

Nothing Better. The World's Best.

We import from all the best European sources and personally inspected the fields of French and German specialists of their finest strains. We buy every year novelties of known merit to improve the mixture. This is the reason it is always complete always the latest and always the best mixture AS WE BELIEVE. We add to all the Pansy Mixtures which we now buy more that fifty per cent of the choicest named kinds obtainable, each in rightful proportion. We thus know what it will produce This is one of the SPECIALTIES which has establi hed and held the reputation of Vaughan's Flower Seeds and this is one which we maintain most carefully not alone as to quality but in vitality and germination. **Trade pkt., 50c.; ⅛-oz., $1.50; ½-oz., $5.00; oz., $10.00.**

the European chestnut (C. sativa) was in full flower about the same date as the last. The persimmon (Diospyros Virginiana) with its short-stalked, greenish yellow flowers, was in bloom July 1. The staminate flowers, are usually borne three in a cluster, and the pistillate usually solitary. It is quite hardy here and fruits freely. Secqurinega ramiflora, a very ornamental euphorbiaceous shrub with oblong lanceolate, deep olive green leaves which form a handsome bush, is now in full bloom. The numerous yellow-green flowers cannot be said to be conspicuous. Ceanothus ovatus was in flower, and past its best July 1. C. Americanus, commonly known as New Jersey tea, was in full bloom July 4. This is a common low growing shrub, and the white flowers are quite pretty.

Sorbaria (Spiræa sorbifolia), with its showy white panicles was in full bloom July 1. S. Bumalda, S. Billardi and S. Anthony Waterer were in fairly good bloom July 1, and at the present date, July 10, are in perfect flower. S. Fontenaysi rosea was partly in flower July 3. S. alba and S. salicifolia are now in good bloom, and S. Menziesii, S. Lenneana and S. albiflora are now coming in flower. Potentilla fruticosa, with its yellow buttercup looking flowers, was in bloom July 3. It will produce scattering flowers for a number of weeks. P. micrandera, a lower growing form than P. fruticosa with smaller flowers, blooms at the same time. The common thyme (Thymus vulgaris) is now in full bloom and, growing on a slope with its myriads of whitish purple flowers, it is real pretty. The creeping thyme (T. serpyllum) with lilac blossoms is also in flower.

BUSINESS DULL.

Summer dullness is over all and trade is very dull, only the funeral business keeping up at all. The scorching days are upon us and all the growers and their army of assistants are kept busy, watering and caring for their stock. Plants of roses and carnations for next winter's flowering are in fine condition. The Joy Floral Co. is even now cutting some few American Beauty roses from the early stock which is coming on nicely. Geny Bros. have a fine assortment of carnations which promise a bountiful crop for next winter. The stores show the scarcity of flowers. With the exception of fine gladioli the display flowers are all gone, and rows of empty vases which were a short time ago full of beautiful blossoms fill the benches and shelves. Some little attempt at window decoration is made with ferns and foliage plants. For filling in funeral work the Joy Floral Co. is using fine double white althea and Geny Bros. have plenty of white asters. Both have fine cuttings of Lilium speciosum, rubrum and album. Of roses there are few and these not of good quality. Carnot and Kaiserin are blooming in small lots sufficient for the present demand. The florists are wearing shirt waist suits and trying to keep cool.

M. C. D.

LIMA, O.—This section of the country has been visited by a most disastrous hailstorm, which did immense damage to glass and growing crops. A. Frueh, the Swan Floral Co. and H. Mueller were among the heaviest losers, one-half of the latter's glass being smashed by the hailstones, which were as large as walnuts.—M.

NOT MUCH STOCK.

Although business is not what it might be, still the demand is equal to the supply, as carnations are about done for and asters as yet are very scarce. Sweet peas are not quite so plentiful, although there are still some. Richmond roses were in good demand the latter part of this week. Harrisii and Japanese lilies are plentiful and in good demand. Water lilies and Lilium auratum are in abundance and are used extensively for funeral and decorative work. This week gladioli will be in; lily of the valley has been very scarce and the supply limited.

NOTES.

H. Eichoff is doing a fine business in his new store at 6826 Woodland avenue.

Visitors: —— Parker, of Woodworth & Parker, Geneva; Ben Eschner, Rice & Co., Philadelphia; Henry Heepe, of Heepe Bros., Akron, and wife, on their way east to Providence, R. I., to spend their vacation.

San Francisco.

NOTHING DOING.

The business at present is about as quiet as it can well be; there is nothing going on and all are complaining very much and with good reason. Flowers are a drug on the market, and whether they are indoor or outdoor grown, they can be bought at very low prices. After this month the supply of carnations and roses will shorten up considerably as the old stock will be pretty well cleaned out of the houses to make room for the young plants. Quite a number are off on vacations and some are contemplating taking a few weeks off in the near future. Most of the growers are very busy preparing their houses for next season and some are making alterations.

NOTES.

The last meeting of the Pacific Coast Horticultural Society was very well attended; three new members were initiated, D. McLaren, R. Diener and T. Schmidt. C. Finke exhibited a very fine lot of dahlias, quite a number of them being his own seedlings. Mr. Diener exhibited a geranium which he originated, the single flower being 2¾ inches in diameter, the color being a very bright red. Mr. Diener claims to have quite a number of novelties and if they are all as good as this geranium, he ought to be able to make a name for himself in the future. Mr. MacRorie and H. Plath each offered a silver cup for the members of the society scoring the most points for exhibits brought to the meetings also for essays read during the year.

T. Munro has been engaged by the Spring Valley Water Co. to lay out and plant its grounds around the pumping stations and reservoirs in this city and vicinity. He is doing this under the supervision of the MacRorie-MacLaren Co., this firm making the plans for the improvements. Mr. Munro was formerly foreman in the Golden Gate park. D. MacRorie is at present on a business trip to southern California.

Visitors: W. A. Reinholt, Petaluma, and J. McHutchison of New York.

TRADE STILL QUIET.

The same report as to the slowness of trade will hold good this week with the possible exception that funeral work took a little more of the attention of the store men than during the previous week. A very heavy rain, in fact a downpour such as has not been witnessed in this vicinity for 20 years or more, fell on and around this city during the early part of last week. The water came down with the force of lead and mashed the crops to the ground. The farmers throughout the state are greatly discouraged as they were able to save only a very small part of their wheat by immediate action after the rain. The sweet pea has naturally suffered from all this rain as has also the aster.

The Florists' Social Club will hold a picnic at Germania park July 29. Refreshments will be furnished on the grounds so that the members will not have to carry the cumbersome picnic basket. The members of the club are making an effort to have all the retail stores closed on the afternoon of the picnic day. Those not belonging to the club are invited to be present and join in the effort to have a good time and forget about the commercial value of flowers.

Alfred Warner was the recipient last week of demonstrations of the Buick automobile by the local agent. Warner thinks that a light weight car with pneumatic tires would be invaluable for delivery purposes and would be just the thing to lessen the time of the trips between his store on College avenue and his glass which is located about six miles north on the same thoroughfare.

John Bertermann has equipped his country home near Cumberland with a spacious bath tub and heater for the bath water. The bath tub is a sort of a combination swimming pool and water-trough made of galvanized iron and will hold easily 15 barrels of water.

Carl Sonnenschmidt of Smith & Young Co. and Walter Bertermann of the well known Bertermann Bros. Co. are wondering whether the wave of prosperity which has struck this country will carry them over to the Vaderland.

Adolph Baur, Irvin Bertermann, John Bertermann and Herman Junge from this city attended the funeral of Herbert Heller at New Castle last week.

Henry Rieman has just cause to be proud of his two long benches of Boston ferns, numbering several hundred plants.

Edward Bertermann and wife will celebrate their silver wedding anniversary September 3.

Homer Wiegand is braving the dangers of a squirrel shooting expedition.

New crops coming along finely.

THE LEEDLE FLORAL COMPANY, SPRINGFIELD, OHIO

Washington.

STOCK AND BUSINESS SHORT.

The city is practically deserted, and in consequence trade has decreased to a great extent; stock is also at low tide, for about the only flowers in sight are gladioli and roses. Asters are not up to the standard owing to the long drought.

Geo. C. Shaffer, Elmer Mayberry and Edward S. Schmidt, the committee in charge of the annual outing, look forward to a big attendance, and hope that all who possibly can get away that day will be on hand to make this the banner outing of them all. The outing will take place at Great Falls, Va., July 29. All members and their friends are requested to be present. Those who attended the previous outings will no doubt remember the good time they enjoyed. The majority of the retail stores have decided to close at noon on the day of the outing in order to give everyone a chance to be present. The club voted that this should be a basket picnic; the only expense will be the car fare, which is 35 cents, round-trip ticket. All refreshments will be supplied by the club. Prizes will be awarded the winning contestants competing in the different games. Two trains have been chartered, so there need be no fear of crowding. Trains will leave Aqueduct bridge, Thirty-sixth and M streets, at 2 p. m. sharp. Those who do not carry baskets and wish to get their dinner at the falls are requested to notify Carl Blaubock, Great Falls Inn, Fairfax County, Va., not later than July 27. Those who receive tickets and do not use same are requested to return them on day of outing. G. S.

Roses, Fruit Trees in pots, Fruit Trees for outside planting, Stove and Greenhouse Plants.

Catalogues on application.
Estimates free.

Bush Hill Park, Enfield, England

Pittsburg.

The summer dullness, with the usual scarcity of good stock at this time of the year, make things very quiet in local circles. Kaiserin roses and lilies are the only flowers of good quality as well as quantity.

NOTES.

The wedding of E. J. McCallum was solemnized at the home of the bride July 17 in the presence of some 35 guests, the Rev. Graham, of the M. E. church, officiating. The bride was attended by her sister, Miss Dorcas Johnston, and W. Webb, of Falls Creek, was best man. The bride was daintily attired in white lace and carried a shower bouquet of Kaiserin roses and lily of the valley. Her attendant was also clad in white and carried a bouquet of Carnot roses. (The effect of the Carnot was exceedingly beautiful and we cannot understand why this rose is not used more extensively.) After the ceremony a wedding dinner was served. The bride's table was set for 12, the centerpiece being Killarney and Kaiserin roses. A feature of the affair was that the day also commemorated the twenty-fifth anniversary of the bride's parents. Mr. and Mrs. McCallum received a great ovation in the shape of a "tin-can serenade" and a hailstorm of rice and old boots, after which they left on a late train for the wilds of Canada. It is interesting that all three members of the McCallum Co., Messrs. K. Klinke, W. Q. Potter and E. J. McCallum, have been married within four weeks of each other. They all deserve and certainly have the good wishes of everyone in the trade.

Wm. Q. Potter, of the McCallum Co., who has been away on his wedding trip, was taken sick about two weeks ago, which compelled him to take to his bed, and the much anticipated trip turned into a rather sad and serious occasion. Mr. Potter is at his business again, although his recovery is progressing rather slowly. He has the best wishes of all his associates for a complete and speedy recovery.

Dard Well, of the Gasser Co., Cleveland, O., who returned from a business trip to Washington, D. C., stopped here on his return, visiting local wholesale houses.

Frank Mendell, who is at present employed in Cleveland, is home on a vacation.

Geo. Marshall, of the Pittsburg Cut Flower Co., leaves July 24 for Atlantic City.

Jas. Clelland, of Grove City, was a visitor this week.

NEPHROLEPIS SCHOLZELI

The New Crested Scotti Fern

This crested sport of Scotti has proven all that has been claimed for it and it promises to become even more popular that its parent.

It is without a doubt the ideal crested fern: a good quick grower, and makes a salable plant in any size from a 3-inch pot to a large specimen A profitable fern for every body. Awarded the following honors:

Shaw Gold Medal, St. Louis Horticultural Society, Nov. 3, 1908, for best plant of decided merit for cultivation, not previously an article of North American commerce.

Silver Medal, Offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3, 1908, for the most meritorious plant or flower of American origin.

Certificate of Merit, Of the Horticultural Society of St. Louis, November 3 1908

Silver Medal, Pennsylvania Horticultural Society, Philadelphia November 10 1908, for best new plant exhibited.

Certificate of Merit, Massachusetts Horticultural Society Boston November 6 1908.

Certificate of Merit. Dutchess County Horticultural Society, Poughkeepsie N Y, October 30 1908

Certificate of Merit. Morris County Gardeners' and Florists' Society Madison, N J, October 30, 1908.

Certificate of Merit, Chestnut Hill Horticultural Society, Philadelphia Pa November 4, 1908.

Certificate of Merit, American Institute, New York City, November 12 1908.

Certificate of Merit, Germantown Horticultural Society, Germantown Philadelphia Pa, November 9, 1908.

Certificate of Merit, Horticultural Society of New York, November 18 1908, for distinct new variety of merit.

Bronze Medal, International Horticultural Exhibition, Berlin, Germany, April 2, 1909.

We offer for immediate delivery, nice strong plants from 2¼-in pots, At **$3.50** per dozen; **$25.00** per 100; **$200.00** per 1000. 25 supplied at 100 rates: 500 supplied at 1000 rates.

HENRY A. DREER, Inc.,
714 Chestnut St., - PHILADELPHIA, PA.

St. Louis.

GLADIOLI PLENTIFUL.

The market the past week was slow. Where any real good stock was seen it was bought up. This was especially the case with carnations. Good stock is now selling at 1½ and 2 cents. Some good roses have made their appearance, notably My Maryland. Killarney opens up too quickly this hot weather, and therefore is not much called for. Asters with a few cool nights will show improvement; gladioli are becoming a glut and hard to get rid of, the light colors having the call for funeral work. Greens are plentiful.

NOTES.

Paul Foerster, one of the keepers in charge of the Missouri Botanical Gardens, who raises everything in the garden, has a new arrival which has not yet been tagged and will not be. He will be named Paul, same name as his father; first boy ever born in the garden. He has two little daughters, Julia and Edna. Mr. Foerster has been connected with the garden for over 12 years and lives in a cottage at the garden.

Young & Sons are entirely changing their retail establishment. The windows are being taken out and the front will be materially enlarged. C. Young, Jr., who has charge of the store during the absence of Jim Young, stated that the firm had done a larger trade this year than ever before.

Everyone is now talking picnic and a very large attendance is expected. Charlie Schoenle, Wm. C. Smith and Henry Ostertag are doing their very best to make this the banner picnic.

Bassett & Washburn, Chicago, are shipping from their new crop of American Beauty roses to this city. They are now mostly short and medium and of good color.

Heller Bros., of New Castle, Ind., are consigning their new crop of American Beauty roses to this market, shorts and mediums of good color.

Poehlmann Bros. Co., Chicago, is shipping some good carnations to this market. They carry well and are sought after.

Alex Siegel leaves this week on a long trip to the Mackinac Islands. He expects to be absent six weeks.

Most of the retail stores, as well as the wholesalers, will close the afternoon of picnic day. W. F.

What Shall I Fill My Empty Houses with Now?

WHAT WILL PAY THE BEST?

Is the cry all over. Use good judgment. I tell you what. ☞ Listen to me. You will never go wrong by devoting a reasonable space to **Araucaria Excelsa**, **Robusta Compacta** and **Excelsa Glauca, Kentias, Palms,** etc., while they are cheap. They will grow into money for you while you are asleep. Every florist knows **the Araucaria King, GODFREY ASCHMANN, of Philadelphia.** Look at what bargains he offers you in this advertisement:

THE ARAUCARIAS.

We are the largest importers of these so well known beautiful evergreen decorative plants **Araucaria Robusta Compacta, Glauca and Excelsa.** ☞ Florists, bear in mind there is no garden lawn or porch, etc., in the summer that is complete without the Araucarias; therefore if you want to make money, ☞ Recommend your customers to buy an Araucaria. Any variety will do to introduce this so valuable plant to your customer friends. ☞ Look! We make you special prices:

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful, Specimen plants 6-7 8 in. pots, 4-5 year old, 4 5-6 tiers, 20-25-30-32 in high, same in width, $1.50 $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old 5-6 7 tiers, 6-in. pots 20-25 30-35 in high 75c, $1.00, $1.25, $1.50 each. Smallest size, new importation 2 to 3 years old 5½ to 6 in. pots, 40c, 50c, 60c and 75c. Can meet all applications.

Araucaria Robusta Compacta and Excelsa Glauca, April 1909 importation 6-in pots 2-3-4 tiers 3 years old, 12 to 20 in. high $1 00, $1.25, $1 50 each.

Kentia Forsteriana, made up 8-in. pots, one large, 45 to 48 in. high, in center, three smaller ones around $4.00; single 6 7 in. pots from 20 to 48 in. high, 75c, $1.00, 1.25, $1.50, $2.00, $2.50 to $3 00 each.

Kentia Belmoreana, 6-in. pots, 25 to 30 in. high, 5 6 good leaves 3 to 4 years old, 75c, $1.00, $1 25 to $1.50; 4-in pots 18 to 20 in. high 25c to 30c.

Begonia Gloire de Lorraine. Our special strains introduced last Christmas, are well known in the florist trade. We have both the deep pink and the light pink varieties, 4-in. pots, 30c.

Sago Palms or Cycas Revoluta, 5 6 7 and 8 in. pots, 5 to 20 leaves to a pot. Price, 10c per leaf.

Ficus Elastica, or Rubbers, 5¼-5½-6 in. pots, 25c, 35c to 50c.

Adiantum Hybridum, large plants fit for 7-8 in pots, suitable for cutting, 35c, 40c and 50c.

Areca Lutescens, 4-in., made up of three plants 20c

Cocos Weddelliana, 3-in., 15c to 18c; 3½-in., 20c to 25c.

Ferns for Dishes, a good assortment, 2½-in., $3.00 per 100.

Asparagus Plumosus, 2½ in., $25.00 per 1000, $3.00 per 100; 3-in. $4 00 per 100.

Cosmos, four best early varieties, made up, three plants in a pot, $4 00 per 100.

Asters, Victoria, German, 5 best sorts, $3.00 per 100.

Jerusalem Cherries or Solanum Multiflorum, the new improved varieties, with large berries, 2½ in. pots, $5.00 per 100.

Zinnia Elegans, 2½ in. pots, in bloom, mostly white, valuable for cut flowers, $5 00 per 100

Cannas, all sorts, and **Scarlet Sage,** 4-in., $5.00 per 100.

Please state if in or out of pots.

All goods must travel at purchaser's risk only, Cash with order, please.

BOOKS FOR FLORISTS

The following books should be in every florist's and gardener's library. A good book on any subject in which you are specially interested is worth years of experience and should be kept convenient for reference at all times.

Send prices quoted and we send the books.

THE AMERICAN CARNATION (C. W. Ward).—A complete treatment of all the most modern methods of cultivating this most important flower. Illustrated. $3.50.

THE HORTICULTURISTS' RULE-BOOK (L. H. Bailey).—Contains information valuable to all those engaged in any branch of horticulture. Illustrated. 312 pages. 75 cents.

MANUAL OF THE TREES OF NORTH AMERICA (Sargent).—The most complete and authentic work on the subject. The pages number 826, with over 600 illustrations. $6.00.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

HOW TO MAKE MONEY GROWING VIOLETS (Saltford).—This is by a practical grower who has made a success of the business. No grower of violets can afford to be without it. 25 cents.

GREENHOUSE CONSTRUCTION (Taft).—It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 118 illustrations. $1.50.

HEDGES, WINDBREAKS, ETC. (Powell).—A treatise on the planting, growth and management of hedge plants for country and suburban homes. A volume of 140 pages, with twenty-two illustrations. 50 cents.

YARD AND GARDEN (Baker). An excellent book treating on the method of making home gardens attractive. The author covers a wide range of subjects in quite an able manner and the book is full of interest for the amateur gardener; 140 illustrations, 420 pages, $2.

CELERY CULTURE (Vaughan).—The important subject of celery culture is thoroughly covered in this illustrated pamphlet of 59 pages. The florist raising young plants of celery and those who grow the plants to maturity will alike find it valuable. 50 cents.

SUCCESS IN MARKET GARDENING (Rawson).—Written by one of the most prominent and successful market gardeners in the country, and who has the large t glasshouses for forcing vegetables for market in America. Outdoor and indoor crops are treated. Illustrated, $1.00.

THE GOLDFISH (Mulertt).—A number of florists find goldfish an attractive and paying addition to their business. The best advice is given in every department of the subject, including construction and care of the parlor aquarium, in this volume of 160 pages, handsomely illustrated. $2.00.

AMERICAN FLORIST CO. 324 Dearborn St., Chicago.

A Fertilizer Trust.

The International Agricultural Corporation has elected officers as follows: W. Schmidtmann, Germany, president; H. C. Sickles, Wilkesbarre, Pa.; vice-president; John W. Fay, Columbia, Tenn.; secretary; R. M. Round, Buffalo, N. Y., treasurer; T. C. Meadows, New York, general manager. It is understood that $4,000,000 has been paid for the Schmidtmann potash mine in Germany, just taken over. The company has also taken over one of the largest phosphate mining companies of Florida, fertilizer plants at eight points, and a number of dry-mixer plants in southern and eastern states.—Country Gentleman.

Davenport, Ia.

TRADE GOOD FOR SEASON.

Considering the usual state of the market in July, business is a little better than usual for this month, with hardly enough stock to supply the demand. Carnations and roses are poor and scarce. There is an abundance of lilies and gladioli and a few asters are coming in. But, all in all, flowers of quality are scarce. T. E.

RACINE, WIS.—J. Bernsted was badly hurt in a runaway, July 16, and is now in the hospital suffering from a number of contusions.

NEWARK, N. J.—Harry Spednarinki, watchman at Geo. Penek's greenhouses, fell from a wagon July 14 and sustained serious injuries.

MILWAUKEE, WIS.—Wm. Edlefsen, president of the Edlefsen-Leideger Co., and his wife celebrated the fortieth anniversary of their marriage the early part of July. Their youngest daughter was married on the same day.

ELWOOD, IND.—Mrs. Dubendorfer is arranging for a large addition to her greenhouse plant, this having become necessary by the increasing business. Mrs. Dubendorfer and her daughter have been in Chicago purchasing material for the purpose.

A New Floral Clock.

Bridlington, a famous English health resort on the coast of Yorkshire, has achieved further distinction in that it possesses the only floral clock in existence which keeps correct time. There are numerous other so-called floral clocks, but the hands of these do not move. The figures on the dial of the Yorkshire clock are composed of growing plants with differently colored blossoms, while the hands are zinc troughs containing mould in which are flowering plants. The machinery which controls this clock obviously could not be placed underground beneath the dial. It is situated, therefore, in a shelter close by and the driving power is carried to the hands by an underground steel shaft. The face of this unique clock fronts upon the Royal Prince's parade. —Harper's Weekly.

P. R. PALETHORPE COMPANY,

OWENSBORO, KY.

Fredericton, N. B.

The weather for some weeks past has been ideal for crops, especially for roots. Potatoes never looked better at this time, although the hay grass will be a little below the average, owing to the setback it got in June. The only floral work is in the way of funeral designs, wedding bouquets and decorations. The lawns and gardens have a beautifully fresh appearance. Trade in all lines is about average. The demand for vegetables is growing; new potatoes are just about ready here to dig; strawberries have retailed at 8 to 10 cents per box. The future prospects are good.

J. B.

Educating the Public.

"Still another scheme for educating the general public has come to my attention," said the city salesman. "The other day I happened to be in a florist's shop talking with the proprietor when a man came in with a bunch of 4x5-inch slips of white paper.

"'Will you take these?' he said to the proprietor. 'On these cards are written the names of all the different kinds of plants a florist is likely to carry. Will you label your flowers, especially the rarer ones or ones that you keep on exhibition in the window, so that customers and people passing may get a lesson in botany and horticulture every time they come this way? I am distributing these cards among all the florists in town and seeking their co-operation.'" — New York Sun.

GLOUCESTER, CONN.—E. M. Arnold will erect two additional greenhouses to those which he already has on Farrows street.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Chicago.

In a match game between the Breen & Kennedy team and the Florists' Club on Friday evening at Bensinger's alleys the Florists nosed out a victory by six pins after a hair-raising finish. Breen & Kennedy were two men short and filled up with Frank Pasternick and Billy Graff, and at the end of the second game were 12 pins to the good, which advantage they held up to the last frame of the last game, when everything depended on that old warhorse, John Zech, who had to make two strikes to put his team in the running. John, who had already rolled two sterling games of 221 and 225, responded nobly and laid down two perfect strike balls, and the victory was won, as all he had to get on his third ball was one pin, but he made assurance doubly sure by hitting the head pin full in the nose, leaving a beautiful four-pin railroad which, fortunately, he did not have to shoot at, and finished with an average of 203 2/3 for the night. This boosts his grand average to 183 15/18, and he is followed in the order named by G. A. Zech, 169 6/21; V. Bergman, 167 15/21; G. Asmus, 163 4/18; T. C. Yarnall, 152 2/21; W. Graff, 148 2/15; F. Pasternick, 145 7/21. The score:

Breen & Kennedy.

Stevens	195	212	156
Pasternick	145	125	142
Graff	125	164	109
Sidebottom	167	182	182
Rosendahl	179	186	173
Total	811	869	762

Florists.

A. Zech	162	163	158
G. Asmus	149	159	125
T. Yarnall	124	169	160
V. Bergman	151	145	172
J. Zech	221	225	165
Total	807	861	780

Breen and Kennedy	811	869	762—2,442
Florists' Club	807	861	780—2,448

The team that will represent the Florists' Club at the S. A. F. convention will roll against a strong team selected by Matty Faetz on July 23, at Faetz's north side alleys.

The crucial game of ball in a series of five between teams representing Bassett & Washburn's greenhouses and Vaughan's Seed Store greenhouses was played on July 18, at the West Hinsdale baseball park and resulted in a victory for the B. & W. team by the score of 26 to 19. The line up of the champions was:

Harry Coombs, c.
Fred Oper, p.
Fred Herman, 1b.
Joe Kohout, 2b.
Aleck Linn, 3b.
Jack Landis, s. s.
Chas. Hillebrand, l. f.
Ed. Hillebrand, c. f.
Otto Reinberg, r. f.

C. L. Washburn, manager of the team, says they have challenged the Poehlmann outfit for a game August 1, and are open to challenge from any greenhouse in the country.

Ed. Winterson says that the alleys in the convention city on which the tournament games will be rolled are the best that he has ever seen. They are kept covered with three or four inchs of sawdust to keep out the moisture and the pins are packed in the same material.

The ball game at the Florists' Club picnic is billed as a hair-raiser. Both wholesalers and retailers are out for blood and each claims that they have the other fellows beaten to a frazzle. Here's hoping.

It is understood that some of the contestants in the 100-yard dash are sneaking off before daybreak and taking trial spins in out-of-the-way places. One enthusiastic manager claims that his entry did the hundred in nine flat. There must have been a strong incentive behind him.

The committee on arrangements for the Florists' Club picnic met at Zech & Mann's Wednesday evening, July 21, and completed final arrangements for the picnic July 22.

At Baltimore.

The Gardeners' Club had its annual picnic July 15, at Bay Shore park. This is located at the junction of the Patapsco river and Chesapeake bay, the site of the battle between the Americans and British in 1814 which resulted in the death of the general of the invading force and the withdrawal of his troops, thus saving our city from capture. It is not only historic ground but an admirable place for an outing. The water is magnificent, the buildings are commodious, the music is fine and many attractions are provided for the pleasure of visitors. There were present about 200 persons, members of the club, their families, friends and invited guests. All enjoyed the bathing and crabbing. The waters here contain crabs by the million, and the sport of catching them is greatly enjoyed by the women and children, if not exciting enough for experienced sportsmen. The main attraction, however, was the bowling. There are 10 really fine alleys, and all had a chance. Besides, there was a baseball game, running matches, sack races, etc. In the men's running race of 100 yards Ward Perry came in front and got the prize of a neat necktie and gold clasp. In the boys' race, same distance, E. Politzer won out, getting a penknife as prize. In the ladies' race of 50 yards Miss Reinhalt came in first. In the sack race for men John Nuth was victor, and in that for boys, Ward Perry. A good deal of interest was shown in the bowling. Following are the scores of the competing teams in the main match:

Guerth	164	171	148
Perry	169	162	157
Bauer	108	165	109
Welsh	137	93	127
Richmond	180	166	190
Total	758	757	731
Boone	172	140	191
Rosnosky	114	152	129
Stevenson	125	102	138
Eberle	134	151	156
Seybold	152	153	181
Total	697	708	795

Each man on the winning team got a scarfpin as a prize.

In the ladies' match Mrs. Fred'k C. Bauer won first prize. Miss Reff second and Mrs. James Boone third. In the visiting ladies' match Mrs. Shaffer, of Washington, D. C., carried off the honors. In the individual bowling Harry Lehr came out ahead and received a handsome watch fob as a prize. Among the visitors from outside the city were Messrs. Gondy, Smith and Rosnosky, of Philadelphia, and George C. Shaffer, W. Mayberry and Ernest Mahoney and wives, of Washington, D. C. S. B.

At Davenport, Ia.

The Tri-City Florists' Club's annual picnic, which was held at Walnut Grove, Moline, Ill., July 15, proved to be one of the most successful affairs ever held by the club. The weather man, in prospect of a bouquet, furnished as fine a day as could be wished for and the committee in charge provided everything to be wished for in the way of refreshments, games and entertainments of all kinds.

As was to be expected, the baseball game was the main event of the day, the Davenport boys playing a team of Rock Island and Moline florists. The Illinois boys, with the aid of the umpire, managed to win the game after a hard struggle, the score resulting 7 to 6 in their favor. But in all the other contests they didn't hold a candle to the Davenporters. Henry and John Staack were the batteries for the Illinois team, and Theo. Ewoldt and John Bills for Davenport. Henry Gaethje, Jr., was the official keg tapper; John Temple, the ladies' man, and Emile Boehm looked after the children and were judges of the races, etc. About 50 were present and all voted the picnic a grand success. T. E.

At New York.

The annual outing of the employes of Vaughan's Seed Store and friends was held on the afternoon of July 17 at Bamberger's park, Eltingville, Staten Island. It was a most successful affair and very creditable to the lads and lassies, whose wise foresight had much to do with making it an entertaining event. The only drawback was the unavoidable absence of Manager Scott, who is visiting his old home in the west. His genial personality and good fellowship at any event which he attends make his absence a loss.

After a fine trip down the bay to St. George and thence by rail to Eltingville, there were baseball games, dancing and bowling, a number of the ladies making high scores in the two latter sports. Mine Host Bamberger provided a most excellent dinner and a group photograph was taken. The return trip to the city in the cool evening was even more enjoyable than the voyage down. The cool breezes, the music and the bright lights caused even the hard-headed and matter-of-fact salesman McArdle to show some glimmerings of sentiment. To Messrs. Chadwick, McArdle and Roy, the Misses Peck and others of the store, congratulations are in order from the guests for this very enjoyable event. A group photograph is reproduced on page 1314.

Don't forget the outings of the Greek-Americans on July 29 and the Cut Flower Exchange July 31.

At Pittsburg.

The Florists' and Gardeners' Club's outing and basket picnic was a great success. With ideal weather and a good place at Keystone park, on the P. and W. R. R., the day was an enjoyable one. The turnout was very good and the few who failed to put in an appearance certainly missed one of the best picnics. One of the main features was the ball game between the wholesalers and retailers. The former give the score at the end of the eighth inning as 4 to 3, which was correct; but they do not like to mention the last inning, when the retailers put 11 runs over the plate. A balloon ascension was on the programme and we think this last inning was it. J.

At Washington.

BOWLING.

The day is coming closer when it will be decided who shall be the champions of the S. A. F. Capt. Shaffer's team is working for a record. Scores as follows:

McLennon	161	146	206	171
Hamner	162	166	157	175
Dalglish	183	153	143	146
Cooke	175	165	136	138
Simmonds	177	223	170	170

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

THE American Blower Co., Detroit, Mich., is sending out a series of excellent little booklets calling attention to their specialties in ventilating, cooling and exhaust machinery. The little one on "Ventilating and Cooling" is an especially tasty bit of work.

A Heating Question.

ED. AMERICAN FLORIST:—

I have a house 16x114 feet with a boiler rated 900 feet radiation, 2½-inch flow pipe. What is the best size for return pipes and how many? The center bed is on the ground, one-half side sash is 14 inches high, wall four feet, double boarded and paper; center ridge 8½ feet. House No. 1 has two 2-inch flows overhead; cannot get in ground over two feet deep. I would like to locate boiler in the same pit with old one, also put both in a battery, for the coldest temperature outside is 20° above, 54° inside. I send a rough sketch of house. I could put boiler in potting shed joining south end of No. 2 greenhouse but it would be inconvenient. J. T.

Georgia.

There is no reason why the new boiler cannot be placed in the present boiler pit, although a little better circulation could be secured if the boiler could be located nearer the end of the house. If hot water is to be used, as I infer is the case, I would run a 3-inch main from the boiler and then carry two 2½-inch flow pipes overhead in the house. Each of these should be made to supply three 2-inch returns which should be placed as high as possible on the side walls.

L. R. T.

Using Supports for Heating.

ED. AMERICAN FLORIST:—

We intend to build a new greenhouse for cut flowers 20x100 and 13 feet high, and are going to use 1¼-inch pipe for braces; these braces we would like to use for heating (steam) at the same time. We wish you would inform us whether the steam will circulate through them and will give the same satisfaction as put up in the usual way. We beg to mention that we have a Morehead steam trap installed.

S. & D.

As a rule I do not think it is worth while trying to use the pipe braces in a greenhouse for heating purposes, although if "S. & D." has gas pipe purlins these might be used to furnish heating surface. It would also be pos-

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity of your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.

Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

A Few Special Boiler Bargains.

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old; 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.

4-250 horse power **Heibe** water tube boilers with Oliver patent grates; 100 lbs. pressure.

1-125 horse power **Morrison** corrugated furnace, internally fired boiler, 125 lbs. pressure.

1-48x21 locomotive fire box boiler, 60 horse power 100 lbs. pressure.

24-Horizontal tubular boilers, triple riveted; ½-in. shell, ⅝ heads; with Murphy Furnace and stokers on all boilers; also coal and ash handling apparatus for these boilers.

Greenhouse Boilers

A complete line of locomotive, fire box boilers, Kroeschell Greenhouse boilers, Return tubular boilers, Cast Iron Sectional boilers, etc.; some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.

Good for 60 lbs. pressure. Free from patches, bulges or blisters. Complete with all fittings. We want to move this boiler quick and quote a special price of..... **$500.**

Boiler Flues! Fitted with special threads and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted; 50 4½-in. tubes, 110 lbs. pressure.

4-72x18 Horizontal tubular boilers, 100 lbs. pressure.

4-72x16 Horizontal tubular boilers, 95 lbs. pressure.

2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.

8-60x16 Horizontal tubular boilers, 100 lbs. pressure.

2-54x16 Horizontal tubular boilers, triple riveted, butt strapped, 125 lbs. pressure.

2-48x14 Horizontal return tubular boilers, butt strapped, double riveted; 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

BOILER TUBES. 20 carloads of 4 in. Boiler tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers Other sizes can be furnished at specially low prices. Write for complete list.

5 carloads of Boiler tubes, 2 to 6 inches inclusive, also tubes with threaded ends. Get our prices on pipe, valves and fittings; we can save you money. Greenhouse fittings at half price.

CYPRESS LUMBER AND LUMBER OF ALL KINDS.

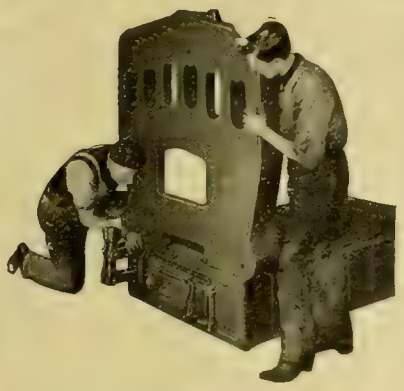
Steel Return Tubular Boilers

The Most Economical Type of Boiler for Greenhouse Heating. Highly recommended by well-known florists.

JOHNSTON HEATING CO., 138 E. 31st St., NEW YORK.

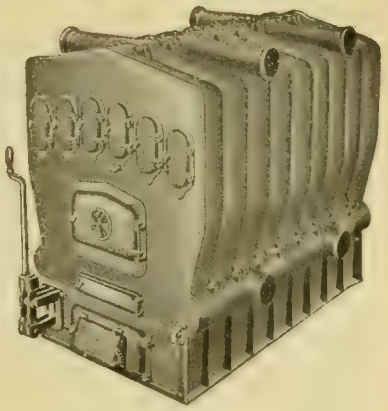
HITCHINGS BOILERS ARE EASY TO SET UP



To "put in a boiler" usually means a big job—men, dirt, bricks, tackle, etc. around your place for several days—that is not our way. The cast iron sectional base takes the place of the brick fire pit, and can be put together in a few minutes. You don't need heavy tackle and rollers to handle the boiler—each section is bolted on separately— a two man job.

If the entrance to your boiler room is small, you don't have to take out the wall; you carry in the boiler in sections—through an opening one foot wide if necessary. This all means a big saving in time and labor.

Send for our Boiler Catalogue.



Hitchings & Company

Elizabeth, N. J.

sible to have the cross pipes and posts connected in the same way, but in that case drip pipes must be provided at the bottom and this would cost about as much as independent piping that would furnish heating surface equal to that in the posts and cross pipes. For various reasons also it is not well to have steam in the vertical posts. Whatever is done, it should be so arranged as to allow the drip water to flow by gravity back to the boiler, and there should be air-valves at the proper places, which in this case would be at the lower end of the coils. L. R. T.

A Heating Query.

ED. AMERICAN FLORIST:—

We are using the overhead system, that is we have two 4-inch flues running overhead and nine 4-inch returns running underneath the benches in a carnation house 26x115 feet. We thought in mild weather we would get more benefit of our coal by closing off some of the pipes, say half of them or so; that would save heating the whole body of water. We thought of putting a valve on each line underneath near where they join the big return going into the boiler. Would you kindly tell us through your paper whether that would work all right, or would the water in those closed pipes interfere with the circulation on the upper end? If so, let us know what you think the best way to arrange it.
SUBSCRIBER.

As I understand the arrangement there would be no difficulty in controlling the circulation if valves are placed upon a part of the return pipes. However, I consider that it is sometimes a question whether it is not cheaper to check the fire, leaving all of the pipes circulating, than it is to cut off half of the returns and carry the water in the others warm enough to furnish the temperature desired in the houses. L. R. T.

E. HIPPARD, Youngstown, O.

Lexington, Ky.

Honaker, the florist, has two of the prettiest windows ever seen here. One of them is a waterwheel scene and the other a cottage built on the hill, with ornamental grounds surrounding same. D. D. Honaker is just back from his vacation, which he spent with his wife in St. Louis. He is not feeling well at all; he has been sick for several weeks, but we hope to see him himself again very soon.

The boys at the J. A. Keller estate are extremely busy at present planting roses. Their chrysanthemums, of which they have several thousand, are also in good shape. In the neighborhood of 20,000 carnations will also be planted here this season.

Lucien Le Clere, manager of the South Broadway Greenhouses, has some fine ferns coming on for the fall sales at that place. He also has the lawns and flower beds looking well at the I. and C. park of which he has charge. A. L.
